2017 LEAF
OWNER’S MANUAL

For your safety, read carefully and keep in this vehicle.
FOREWORD
Welcome to the growing family of new NISSAN owners. This vehicle is delivered to you with confidence. It was produced using the latest techniques and strict quality control.

This manual was prepared to help you understand the operation and maintenance of your vehicle so that you may enjoy many miles of driving pleasure. Please read through this manual before operating your vehicle.

A separate Warranty Information Booklet explains details about the warranties covering your vehicle. The NISSAN Service and Maintenance Guide explains details about maintaining and servicing your vehicle. Additionally, a separate Customer Care/Lemon Law Booklet (U.S. only) will explain how to resolve any concerns you may have with your vehicle, as well as clarify your rights under your state's lemon law.

In addition to factory installed options, your vehicle may also be equipped with additional accessories installed prior to delivery. It is recommended that you visit a NISSAN certified LEAF dealer for details concerning the particular accessories with which your vehicle is equipped. It is important that you familiarize yourself with all disclosures, warnings, cautions and instructions concerning proper use of such accessories prior to operating the vehicle and/or accessory. It is recommended that you visit a NISSAN certified LEAF dealer for details concerning the particular accessories with which your vehicle is equipped.

A NISSAN certified LEAF dealer knows your vehicle best. When you require any service or have any questions, we will be glad to assist you with the extensive resources available to us.

READ FIRST – THEN DRIVE SAFELY
Before driving your vehicle, read your Owner’s Manual carefully. This will ensure familiarity with controls and maintenance requirements, assisting you in the safe operation of your vehicle.

WARNING
IMPORTANT SAFETY INFORMATION REMINDERS!
Follow these important driving rules to help ensure a safe and comfortable trip for you and your passengers!
• NEVER drive under the influence of alcohol or drugs.
• ALWAYS observe posted speed limits and never drive too fast for conditions.
• ALWAYS give your full attention to driving and avoid using vehicle features or taking other actions that could distract you.
• ALWAYS use your seat belts and appropriate child restraint systems. Preteen children should be seated in the rear seat.
• ALWAYS provide information about the proper use of vehicle safety features to all occupants of the vehicle.
• ALWAYS review this Owner’s Manual for important safety information.
MODIFICATION OF YOUR VEHICLE

This vehicle should not be modified. Modification could affect its performance, safety or durability, and may even violate governmental regulations. In addition, damage or performance problems resulting from modification may not be covered under NISSAN warranties.

WARNING

Installing an aftermarket On-Board Diagnostic (OBD) plug-in device that uses the port during normal driving, for example remote insurance company monitoring, remote vehicle diagnostics, telematics or engine reprogramming, may cause interference or damage to vehicle systems. We do not recommend or endorse the use of any aftermarket OBD plug-in devices, unless specifically approved by NISSAN. The vehicle warranty may not cover damage caused by any aftermarket plug-in device.

WHEN READING THE MANUAL

This manual includes information for all features and equipment available on this model. Features and equipment in your vehicle may vary depending on model, trim level, options selected, order, date of production, region or availability. Therefore, you may find information about features or equipment that are not included or installed on your vehicle.

All information, specifications and illustrations in this manual are those in effect at the time of printing. NISSAN reserves the right to change specifications, performance, design or component suppliers without notice and without obligation. From time to time, NISSAN may update or revise this manual to provide Owners with the most accurate information currently available. Please carefully read and retain with this manual all revision updates sent to you by NISSAN to ensure you have access to accurate and up-to-date information regarding your vehicle. Current versions of vehicle Owner’s Manuals and any updates can also be found in the Owner section of the NISSAN website at https://owners.nissanusa.com/nowners/navigation/manualsGuide. If you have questions concerning any information in your Owner’s Manual, contact NISSAN Consumer Affairs. For contact information, refer to the NISSAN CUSTOMER CARE PROGRAM page in this Owner’s Manual.

IMPORTANT INFORMATION ABOUT THIS MANUAL

You will see various symbols in this manual. They are used in the following ways:

WARNING

This is used to indicate the presence of a hazard that could cause death or serious personal injury. To avoid or reduce the risk, the procedures must be followed precisely.

CAUTION

This is used to indicate the presence of a hazard that could cause minor or moderate personal injury or damage to your vehicle. To avoid or reduce the risk, the procedures must be followed carefully.
If you see the symbol above, it means “Do not do this” or “Do not let this happen”.

If you see a symbol similar to those above in an illustration, it means the arrow points to the front of the vehicle.

If you see a symbol similar to those above in an illustration, it means the arrow points to the front of the vehicle.

If you see a symbol similar to those above in an illustration, it means the arrow points to the front of the vehicle.

Arrows in an illustration that are similar to those above indicate movement or action.

Arrows in an illustration that are similar to those above indicate movement or action.

Arrows in an illustration that are similar to those above indicate movement or action.

Arrows in an illustration that are similar to those above indicate movement or action.

Arrows in an illustration that are similar to those above indicate movement or action.

Arrows in an illustration that are similar to those above indicate movement or action.

CALIFORNIA PROPOSITION 65 WARNING

WARNING

Certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

CALIFORNIA PERCHLORATE ADVISORY

Some vehicle parts, such as lithium batteries, may contain perchlorate material. The following advisory is provided: “Perchlorate Material - special handling may apply. For additional information, refer to www.dtsc.ca.gov/hazardouswaste/perchlorate.”

Bluetooth® is a trademark owned by Bluetooth SIG, Inc. and licensed to Visteon.

SiriusXM® services require a subscription after trial period and are sold separately or as a package. The satellite service is available only in the 48 contiguous USA and DC. SiriusXM® satellite service is also available in Canada; see www.siriusxm.ca.

NISSAN CUSTOMER CARE PROGRAM

NISSAN CARES ...

Both NISSAN and your NISSAN certified LEAF dealer are dedicated to serving all your automotive needs. Your satisfaction with your vehicle and your NISSAN certified LEAF dealer are our primary concerns. Your NISSAN certified LEAF dealer is always available to assist you with all your automobile sales and service needs.

However, if there is something that your NISSAN certified LEAF dealer cannot assist you with or you would like to provide NISSAN directly with comments or questions, please contact the NISSAN Consumer Affairs Department using our toll-free number:

For U.S. customers
1-877-NOGASEV
(1-877-664-2738)

For Canadian customers
1-800-387-0122

The Consumer Affairs Department will ask for the following information:

- Your name, address, and telephone number
- Vehicle identification number (attached to the top of the instrument panel on the driver’s side)
- Date of purchase
- Current odometer reading
- Your NISSAN certified LEAF dealer’s name
- Your comments or questions

OR

You can write to NISSAN with the information at:

For U.S. customers
Nissan North America, Inc.
Consumer Affairs Department
P.O. Box 685003
Franklin, TN 37068-5003
or via e-mail at:
naconsumeraffairs@nissan-usa.com

For Canadian customers
Nissan Canada Inc.
5290 Orbitor Drive
Mississauga, Ontario L4W 4Z5
or via e-mail at:
information.centre@nissancanada.com

If you prefer, visit us at:

www.nissanusa.com (for U.S. customer) or
www.nissan.ca (for Canadian customers)

We appreciate your interest in NISSAN and thank you for buying a quality NISSAN vehicle.

THE EV (ELECTRIC VEHICLE) SYSTEM

The LEAF is an electric vehicle. Some of the vehicle’s systems operate differently and have different operating characteristics than vehicles equipped with an internal combustion engine. It is important to carefully review the entire Owner’s Manual for this reason. The main difference is the LEAF is powered by electricity. The LEAF does not require and it is not capable of using gasoline like a vehicle powered by a traditional internal combustion engine. The LEAF uses electricity stored in the lithium ion (Li-ion) battery. The vehicle’s Li-ion battery must be charged with electricity before the vehicle can be driven. As the vehicle operates, the Li-ion battery gradually discharges. If the Li-ion battery becomes completely discharged, the vehicle will not operate until it is re-charged.

This vehicle uses two types of batteries. One is the 12-volt battery that is the same as the battery in vehicles powered by gasoline engines, the other is the Li-ion battery (high voltage).

The 12-volt battery provides power to the vehicle systems and features such as the audio system, supplemental restraint systems, headlights and windshield wipers.

The Li-ion battery provides power to the electric motor (traction motor) that moves the vehicle. The Li-ion battery also charges the 12-volt battery.

The vehicle must be plugged in for the Li-ion battery to be charged. Additionally, the vehicle system can extend the vehicle range by converting driving force into electricity that is stored in the Li-ion battery while the vehicle is decelerating or being driven downhill. This is called regenerative braking. This vehicle is considered to be an environmentally friendly vehicle because it does not emit exhaust gases, such as carbon dioxide and nitrogen oxide.

WARNING

Your vehicle contains a sealed Li-ion high voltage battery. If the Li-ion battery is disposed of improperly, there is a risk of severe burns and electrical shock that may result in serious injury or death and there is also a risk of environmental damage.

CAUTION

To prevent damage to the Li-ion battery:

- Do not expose the vehicle to extreme ambient temperatures for extended periods.
- Do not store the vehicle in temperatures below −13°F (−25°C) for more than seven days.
- Do not leave the vehicle for more than 14 days where the Li-ion battery available charge gauge reaches a zero or near zero (state of charge).
- Do not use the Li-ion battery for any other purpose.
NOTE:

• If the outside temperature is −13°F (−25°C) or less, the Li-ion battery may freeze and it cannot be charged or provide power to run the vehicle. Move the vehicle to a warm location.

• The capacity of the Li-ion battery in your vehicle to hold a charge will, like all such batteries, decrease with time and usage. As the battery ages and capacity decreases, this will result in a decrease from the vehicle’s initial mileage range. This is normal, expected, and not indicative of any defect in your Li-ion battery. NISSAN estimates that battery capacity will be approximately 80% of original capacity after five years, although this is only an estimate, and this percentage may vary (and could be significantly lower) depending on individual vehicle and Li-ion battery usage.

• It is recommended that you visit a NISSAN certified LEAF dealer for information about recycling or disposal of the Li-ion battery. Do not attempt to recycle or dispose of the Li-ion battery yourself.

DRIVING WITH A DISCHARGED LI-ION BATTERY

When a destination is set in the navigation system (if so equipped) that exceeds the available vehicle range, the navigation system automatically searches the location of nearby charging stations. When the nearby charging station locations are displayed, charge the Li-ion battery as soon as possible.

Warning lights illuminate on the instrument panel and messages are displayed on the vehicle information display to inform you that the Li-ion battery charge is low. Instructions are also displayed on the navigation system screen (if so equipped) to direct you to nearby charging stations.

The vehicle’s range is very limited when these warning lights illuminate and messages are displayed. Follow the instructions on the navigation system screen (if so equipped) and immediately charge the vehicle at the nearest charging station.
There are three levels of information that will be displayed as the Li-ion battery becomes discharged:

1. The following warning lights illuminate on the instrument panel and messages are displayed on the vehicle information display at the same time to indicate low Li-ion battery charge:
   - The low battery charge warning light
   - The master warning light
   - “Li-ion battery low charge warning” warning message is displayed on the vehicle information display.
   - For additional information, refer to “Low battery warning” in the “Instruments and controls” section of this manual.
   - Messages are displayed on the center display (if so equipped).
   - For additional information, refer to “Low battery warning” in the “Instruments and controls” section of this manual.
   - Messages are displayed on the navigation system screen (if so equipped).

   **NOTE:**
   Due to traffic conditions, it may be difficult to get to the charging station suggested by the navigation system (if so equipped). If the Li-ion battery is almost completely discharged, drive directly to the nearest charging station.

---

**EV Overview**
2. If the vehicle is driven and the Li-ion battery continues to discharge, the driving range on the instrument panel changes to “— — —” (2).

Messages are displayed on the navigation system screen (if so equipped). For additional information, refer to “Low battery warning” in the “Instruments and controls” section of this manual.

3. When the power limitation indicator light illuminates, traction motor output is limited resulting in reduced vehicle speed. Stop the vehicle in a safe location before the Li-ion battery becomes completely discharged and there is no power available to drive the vehicle. Contact Roadside Assistance Service shown in your NISSAN Warranty Information Booklet. For additional information, refer to “If the Li-ion battery becomes completely discharged” in the “In case of emergency” section of this manual.

**CHARGING THE 12-VOLT BATTERY**

The 12-volt battery is charged automatically using electricity stored in the Li-ion battery.

When the 12-volt battery is being charged, the charge status indicator light on the instrument panel flashes (except when charging the Li-ion battery or the power switch is in the READY to drive position). For additional information, refer to “Charging status indicator lights” in the “Charging” section of this manual.

While vehicle is driven

The Li-ion battery charges the 12-volt battery as necessary when the power switch is in the READY to drive position or ON position.

The 12-volt battery is not charged in the following conditions.

- When the power switch is in the ACC position.
- When the power switch is in the ON position and the shift position is in the N (Neutral) position.

While the vehicle is not in use

When the EV system is off for an extended time, the 12-volt battery may be automatically charged for a short period of time on a regular basis.

**LI-ION BATTERY WARMER (IF SO EQUIPPED)**

**CAUTION**

The Li-ion battery warmer does not operate if the available Li-ion battery charge is less than approximately 30% and the charger is not connected to the vehicle.

To help prevent the Li-ion battery from freezing, do not leave the vehicle in an environment if temperatures may go below -1°F (-17°C) unless the vehicle is connected to a charger.

The Li-ion battery warmer helps to prevent the Li-ion battery from freezing and helps to prevent significant reductions in the Li-ion battery output when the temperature is cold. The Li-ion battery warmer automatically turns on when the Li-ion battery temperature is approximately -1°F (-17°C) or colder. The Li-ion battery warmer automatically turns off when the Li-ion battery temperature is approximately 14°F (-10°C) or higher.

**EV Overview**

EV-5
The Li-ion battery warmer uses electrical power from an external source when a charger is connected to the vehicle. The Li-ion battery warmer uses electrical power from the Li-ion battery when the charger is not connected to the vehicle.

NOTE:
- Connect the charger to the vehicle and place the power switch in the OFF position when parking the vehicle if temperatures may go below -1°F (-17°C). This provides external power to the Li-ion battery warmer when it operates and does not discharge the Li-ion battery.
- The charging status indicator lights illuminate in a specific pattern when the Li-ion battery warmer operates. The charging status indicator lights use the same pattern to indicate 12-volt battery charging, Climate Ctrl. Timer operation or Remote Climate Control operation (models with navigation system). The charging status indicator lights do not change if the Li-ion battery warmer operates at the same time as the above features. For additional information, refer to “Charging status indicator lights” in the “Charging” section of this manual.

- The Li-ion battery warmer uses Li-ion battery power to operate, even if the vehicle is connected to a charger when:
  - the vehicle's power switch is in the ON position.
  - there is no electrical power being supplied to the charging equipment.
- When the Li-ion battery warmer is already in operation using an external power source, it will continue to use the external power even if the power switch is placed in the ON position.
- Vehicle driving range is reduced if the Li-ion battery warmer operates (Li-ion battery temperature approximately -1°F (-17°C) or colder) while driving the vehicle. You may need to charge the Li-ion battery sooner than in warmer temperatures.
- The Li-ion battery requires more time to charge when the Li-ion battery warmer operates.
- The predicted charging time displayed on the meter and navigation system (if so equipped) increases when the Li-ion battery warmer operates.

- Climate control performance is reduced when using the Climate Ctrl. Timer or Remote Climate Control (models with navigation system) while the Li-ion battery warmer operates.
- The Li-ion battery may not charge to the expected level using the charging timer when [Start Time] (models with navigation system) and [End Time] are set while the Li-ion battery warmer operates.
- Set the Charging Timer [End Time] when charging in cold weather. The vehicle automatically determines when to start charging to fully charge the Li-ion battery, even if the Li-ion battery warmer operates. Charging ends before the set end time if the Li-ion battery is fully charged.
The EV system uses high voltage up to approximately DC 400 volt. The system can be hot during and after starting and when the vehicle is shut off. Be careful of both the high voltage and the high temperature. Follow the warning labels that are attached to the vehicle.

Never disassemble, remove or replace high-voltage parts and cables as well as their connectors because they can cause severe burns or electric shock that may result in serious injury or death. High-voltage cables are colored orange. The vehicle high voltage system has no user serviceable parts. It is recommended that you take your vehicle to a NISSAN certified LEAF dealer for any necessary maintenance.

1. Traction motor and reduction gear
2. Traction motor inverter
3. Power delivery module (PDM) (Charger, DC/DC converter, junction box)
4. High-voltage wire harnesses (colored orange)
5. Li-ion battery
6. Service plug
ROAD ACCIDENT PRECAUTIONS

WARNING

In case of a collision:
• If your vehicle is drivable, pull your vehicle off the road, push the P (Park) position switch on the shift lever, apply the parking brake and turn the EV system off.
• Check your vehicle to see if there are exposed high-voltage parts or cables. For their locations, refer to “High voltage components” in this section. To avoid personal injury, never touch high-voltage wiring, connectors, and other high-voltage parts, such as inverter unit and Li-ion battery. An electric shock may occur if exposed electric wires are visible when viewed from inside or outside of your vehicle. Therefore, never touch exposed electric wires.
• If the vehicle receives a strong impact to the floor while driving, stop the vehicle in a safe location and check the floor.

• Leaks or damage to the Li-ion battery may result in a fire. If you discover them, contact emergency services immediately. Since the fluid leak may be lithium manganate from the Li-ion battery, never touch the fluid leak inside or outside the vehicle. If the fluid contacts your skin or eyes, wash it off immediately with a large amount of water and receive immediate medical attention to help avoid serious injury.
• If a fire occurs in the EV, leave the vehicle as soon as possible. Only use a type ABC, BC or C fire extinguisher that is meant for use on electrical fires. Using a small amount of water or the incorrect fire extinguisher can result in serious injury or death from electrical shock.
• If your vehicle needs to be towed, do it with the front wheels raised. If the front wheels are on the ground when towing, the traction motor may generate electricity. This may damage the components of the EV system and cause a fire.
• If you are not able to safely assess the vehicle due to vehicle damage, do not touch the vehicle. Leave the vehicle and contact emergency services. Advise first responders that this is an electric vehicle.
• In the event of an accident that requires body repair and painting, the Li-ion battery pack and high voltage parts such as the inverter, including the wire harness, should be removed prior to painting. It is recommended that you visit a NISSAN certified LEAF dealer for this service. Li-ion battery packs exposed to heat in the paint booth will experience capacity loss. Damaged Li-ion battery packs may also pose safety risks to untrained mechanics and repair personnel.
EMERGENCY SHUT-OFF SYSTEM

The emergency shut-off system is activated and the high-voltage system automatically turns off in the following conditions:
- Front and side collisions in which the air bags are deployed.
- Certain rear collisions.
- Certain EV system malfunctions.

For the above collisions and certain other EV system malfunctions, the READY to drive indicator light will turn off. For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.

The emergency shut-off activates for the above collisions to minimize risk of an event that could cause injury or an accident. If the emergency shut-off system activates, the EV system may not be switched to the READY to drive position; it is recommended that you visit a NISSAN certified LEAF dealer. Even if the power switch is switched to the READY to drive position, the system may shut-off suddenly. Therefore, drive cautiously to the nearest certified repair facility; it is recommended that you visit a NISSAN certified LEAF dealer for service.

EV CHARACTERISTICS

WARNING
- Pay special attention to pedestrians. Because there is no engine noise, pedestrians may not know the vehicle is approaching, moving or about to move, and may step into the path of vehicle travel.
- When leaving the vehicle, be sure to turn off the EV system.
- Be sure to push the P (Park) position switch on the shift lever and apply the parking brake when parking because the vehicle can move when the READY to drive indicator light is ON. When the READY to drive indicator light is ON, do not leave your vehicle in a shift position other than the P (Park) position.
- Keep the brake pedal depressed until you are ready to drive. When the vehicle is in the D (Drive) position, B or R (Reverse) position, if you release the brake pedal and do not depress the accelerator, the vehicle will creep and may start abruptly. This may cause serious injury or death.

NOTE:
- The vehicle cannot run with a discharged Li-ion battery. Repeated acceleration consumes more power from the Li-ion battery than driving at a steady speed.
- This vehicle is equipped with a regenerative brake system. The primary purpose of the regenerative brake system is to provide some power to recharge the Li-ion battery and extend driving range. A secondary benefit is “engine braking” that operates based on Li-ion battery conditions.
- In the D (Drive) position, when the accelerator pedal is released, the regenerative brake system provides some deceleration.
- When you put the shift lever in the B position and take your foot off the accelerator pedal, more regenerative brake is applied than in the D (Drive) position.
• Less deceleration is provided by the regenerative brake system when the Li-ion battery is fully charged. The regenerative brake is automatically reduced when the Li-ion battery is fully charged to prevent the Li-ion battery from becoming overcharged. The regenerative brake is also automatically reduced when the battery temperature is high/low (indicated by the red/blue zones on the Li-ion battery temperature gauge) to prevent Li-ion battery damage.

• The brake pedal should be used to slow or stop the vehicle depending on traffic or road conditions. The vehicle brakes are not affected by the regenerative brake system operation.

NOISE AND VIBRATION
You might experience the following noise or vibration as a normal characteristic of this vehicle:
• Traction motor noise from the motor compartment.
• Water pump and radiator fan noise while charging.
• Compressor and radiator fan noise when the Climate Ctrl. Timer or remote climate control (models with navigation system) is used.
• Relay operation noise and vibration at start-up and shut-down of the EV system (power switch placed in the ON and OFF position).
• Approaching Vehicle Sound for Pedestrians (VSP).

LIFE WITH AN EV (SCENE GUIDE)
This section provides a brief explanation for the most important LEAF functions. For additional information, refer to the specific sections of this manual for detailed explanations of the vehicle features and operation.

CHARGING THE LI-ION BATTERY

WARNING
The EV system uses a high voltage current. Failure to follow the proper handling instructions may cause serious injury or death. Be sure to read the “Charging” section and follow the procedures and guidelines described.
The following 3 methods can be used for recharging the Li-ion battery:

<table>
<thead>
<tr>
<th>Charge port</th>
<th>Charge connector</th>
<th>Power</th>
<th>Charging</th>
<th>Battery type</th>
<th>Estimated charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td>NORMAL CHARGE</td>
<td>See &quot;CH. How to charge&quot; in the &quot;CH. Charging&quot; section.</td>
<td>Use the charging device (AC 220-240 V) that is installed in your home</td>
<td>30 kW Battery</td>
<td>Approximately 5.5 to 9.5 hours (depending on the charged to charge the Li-ion battery from discharged 10% battery charge warning light illuminated) to 100% charged.</td>
<td></td>
</tr>
<tr>
<td>TRICKLE CHARGE</td>
<td>See &quot;CH. How to trickle charge&quot; in the &quot;CH. Charging&quot; section.</td>
<td>Use the EVSE (Electric Vehicle Supply Equipment) or trickle charge cable for &quot;trickle&quot; charging at a destination such as a hotel. Use only a 110-130 volt, 15 amp, dedicated outlet for charging.</td>
<td>30 kW Battery</td>
<td>Approximately 24 hours to charge the Li-ion battery from discharged (Low battery charge warning light illuminated) to 100% charged.</td>
<td></td>
</tr>
<tr>
<td>QUICK CHARGE</td>
<td>See &quot;CH. How to quick charge&quot; in the &quot;CH. Charging&quot; section.</td>
<td>Public charging stations</td>
<td>30 kW Battery</td>
<td>Approximately 30 minutes to charge the Li-ion battery from discharged (Low battery charge warning light illuminated) to 80% charged.</td>
<td></td>
</tr>
</tbody>
</table>
Charging time information

Normal charge
- 30 kWh Battery
- Approximately 5.5 to 9.5 hours (depending on the charger)

Trickle charge
- 30 kWh Battery
- Approximately 26 hours

Quick charge (if so equipped)
- 30 kWh Battery
- Approximately 30 minutes

*: Low battery charge warning light is ON.
BEFORE DRIVING YOUR VEHICLE (MODELS WITH NAVIGATION SYSTEM)

The Li-ion battery charging status and the Li-ion battery warmer (if so equipped) operation can be checked using an internet enabled smart phone or personal computer at home. You may also choose to have SMS messages (text messages) sent to a cellular phone. Additionally, the vehicle’s heater and air conditioner can be set to operate using the Climate Ctrl. Timer function or A/C-heater remote function, if necessary. For additional information, refer to “Remote climate control” in the “Display screen, heater, air conditioner, audio and phone systems” section of this manual.

NOTE:
• To check the Li-ion battery charging status or to use the remote heater and air conditioner using an internet enabled smart phone or personal computer, the following conditions must be met:
  – The vehicle must be located in a cellular phone or smart phone coverage area.
  – The internet enabled cellular phone or smart phone must be located in a cellular phone or smart phone coverage area.
  – The computer must be connected to the internet.
  – A cellular phone must be used to communicate with the vehicle.
  – A cellular phone capable of text messaging must be used to receive text message regarding vehicle charge status.
• The remote heater and cooler can adjust the in-cabin temperature.
• When the charge connector is disconnected from the vehicle, the heater and air conditioner operates using vehicle Li-ion battery electric power.
• If the remote heater and air conditioner function and Li-ion battery charging are performed at the same time, Li-ion battery charging will take longer than usual due to the power used to heat or cool the vehicle.
Checking Li-ion battery charging status

The Li-ion battery charge status can be checked on the NISSAN Data Center website via an internet enabled smartphone or personal computer. If the Li-ion battery is not sufficiently charged, you can start charging the Li-ion battery via the remote charge function. For additional information, refer to “Charging related remote function” in the “Charging” section of this manual.
Operating the climate control system before driving

The vehicle’s heating and air conditioning system can be turned on via remote control with an internet enabled smart phone or personal computer.

This allows the interior of the vehicle to be heated or cooled while the vehicle is charging. This reduces the load on the Li-ion battery while the vehicle is being driven and can help increase the vehicle driving range. For additional information, refer to “Remote climate control” in the “Display screen, heater, air conditioner, audio and phone systems” section of this manual.
Notification of the Li-ion battery warmer operation (if so equipped)

You can be notified with the status of the Li-ion battery warmer operation on the NISSAN Data Center website via an internet enabled smartphone or personal computer.

When the power switch is in the OFF position and the charge connector is not connected, if the Li-ion battery warmer starts or stops, it notifies you to connect the charger to the vehicle.

For additional information, refer to the LEAF Navigation System Owner’s Manual.
STARTING YOUR VEHICLE

1. Depress the brake pedal.
2. Push the power switch.
3. Check that the READY to drive indicator light illuminates and the start up sound is audible. For additional information, refer to “Ready to drive indicator light” in the “Instruments and controls” section of this manual.
4. For models with navigation system: If route guidance is necessary, enter the destination in the navigation system. For additional information, refer to the LEAF Navigation System Owner’s Manual.
5. Check the Li-ion battery level and the estimated driving range shown on the meter. For additional information, refer to “Driving range” in the “Instruments and controls” section of this manual.

NOTE:

- Before driving, compare the driving distance to the destination displayed on the navigation system screen (if so equipped) with the estimated driving range shown on the meter. Determine if it will be necessary to charge the Li-ion battery before or while driving to your planned destination.
- If it is necessary to charge the Li-ion battery, use the navigation system (if so equipped) to search for available charging stations on your planned driving route.
DRIVING THE VEHICLE

1. Depress the brake pedal.
2. Release the parking brake.
3. Move the shift lever into the D (Drive) position. When released, the shift lever returns to its original center position.
4. Confirm that the vehicle is in the D (Drive) position. The indicator next to the “D” by the shift lever illuminates and “D” is displayed on the meter.
5. Release the brake pedal.
6. Depress the accelerator pedal and start driving.

These are the following gear positions for driving the vehicle forward:
• Use the D (Drive) position for optimum driving performance.
• Use the B position for downhill driving. When the B position is used, more regenerative brake is applied when the accelerator pedal is released in comparison to the D (Drive) position.

For additional information, refer to “Driving the vehicle” in the “Starting and driving” section of this manual.

EV Overview
NOTE:
The regenerative brake converts the vehicle's forward motion to electric power to help slow the vehicle.

Use the ECO mode for maximum vehicle range and for city driving. The ECO mode helps reduce power consumption by reducing acceleration when compared to the same accelerator pedal position in the D (Drive) position.

While the vehicle is being driven you can check your own ECO drive level on the ECO indicator. For additional information, refer to “ECO indicator” in the “Instruments and controls” section of this manual.
If the low battery charge warning light illuminates, the Li-ion battery charge is too low for travel. For additional information, refer to “Low battery charge warning light” in the “Instruments and controls” section of this manual. Charge the Li-ion battery as soon as possible.
Parking the vehicle

1. When stopping the vehicle, push the P (Park) position switch on the shift lever while depressing the brake pedal. Confirm that the vehicle is in the P (Park) position by checking the shift indicator located near the shift lever or the vehicle information display.

2. Apply the parking brake.
3. Push the power switch to the OFF position.
4. If a parking lot is equipped with charging facilities, charge the Li-ion battery as necessary. For additional information, refer to the “Charging” section of this manual.
CHARGING AFTER DRIVING
Charging the Li-ion battery
When you return home, connect the vehicle to the charging station installed at your home using the normal charge connector.

Charge the vehicle or set the charging timer function to have the vehicle charge at a specific time. For additional information, refer to “Charging timer” in the “Charging” section of this manual.

1. When the power switch is turned off, the settings of the charging timer, and the Climate Ctrl. Timer and the charge connector lock functions are displayed on the vehicle information display. For additional information, refer to “Vehicle information display” in the “Instruments and controls” section of this manual.

2. Open the charge port lid and charge port cap. For additional information, refer to “Charge port lid” in the “Pre-driving checks and adjustments” section of this manual.

3. Connect the charge connector to the vehicle.

4. When the charging timer is turned on, charging starts at the set time. When the charging timer is not turned on, charging starts immediately.

NOTE:
• Charging can be started remotely, even if the charging timer is set up.
• When you have forgotten to connect the charge connector at home, there is a function that can notify you via a text message capable cellular phone, internet enabled smart phone or personal computer. For additional information, refer to “Charging related remote function” in the “Charging” section of this manual (models with navigation system).
• NISSAN recommends that you connect the normal charge cable when getting out of the vehicle, even if it is not going to be used. By doing this, you can get the most out of the remote climate control (models with navigation system) and Climate Ctrl. Timer functions the next time you use the vehicle.
EFFICIENT USE OF YOUR VEHICLE RANGE

The distance you can drive the vehicle (range) varies considerably depending upon available charge, weather, temperature, usage, battery age, topography, and driving style.

Refer to the Monroney label (window sticker) for the official EPA range. Your actual range can vary, either initially or as the battery ages and with use over time. For additional information, refer to “Improve driving range” in this section for information on the factors that affect vehicle range and how to use the vehicle to maximize vehicle range.

IMPROVE DRIVING RANGE

Vehicle range depends on a number of factors. Actual vehicle range will vary depending upon:
• Speed,
• Vehicle load,
• Electrical load from vehicle accessories,
• Traffic and road conditions.

NISSAN recommends the following driving habits to help maximize vehicle range:

Before driving:
• Follow recommended periodic maintenance.
• Keep tires inflated to correct pressure.
• Keep wheels in correct alignment.
• Pre-heat or pre-cool the interior cabin while the vehicle is charging.
• Remove unnecessary cargo from the vehicle.

While driving:
• Drive in ECO mode — The ECO mode helps reduce power consumption by reducing acceleration when compared to the same accelerator pedal position in the D (Drive) position.
• Drive at a constant speed. Maintain cruising speeds with constant accelerator positions or by using cruise control when appropriate.
• Accelerate slowly and smoothly. Gently press and release the accelerator pedal for acceleration and deceleration.
• Drive at moderate speeds on the highway.
• Avoid frequent stopping and braking. Maintain a safe distance behind other vehicles.
• Turn off the air conditioner/heater when it is not necessary.
• Select a moderate temperature setting for heating or cooling to help reduce power consumption.
• Use the air conditioner/heater and close windows to reduce drag when cruising at highway speed.
• Vehicle range may be substantially reduced in extremely cold conditions (for example, -4°F (-20°C)).
• Using the climate control system to heat the cabin when the outside temperature is below 32°F (0°C) uses more electricity and affects vehicle range more than when using the heater when the temperature is above 32°F (0°C).
• Release the accelerator pedal to slow down and do not apply the brakes when traffic and road conditions allow.

  – This vehicle is equipped with a regenerative brake system. The primary purpose of the regenerative brake system is to provide some power to recharge the Li-ion battery and extend driving range. A secondary benefit is “engine braking” that operates based on Li-ion battery conditions. In the D (Drive) position, when the accelerator is released, the regenerative brake system provides some deceleration and some power to the Li-ion battery.

LI-ION BATTERY LIFE

The Li-ion battery’s ability to hold a charge can be affected by how you drive the vehicle, store the vehicle, how you charge the Li-ion battery and Li-ion battery temperature during vehicle operation and charging.

To maximize the battery’s useful life, use the following driving and charging habits where possible:

• Avoid exposing a vehicle to extreme ambient temperatures for extended periods.
• Avoid storing a vehicle in temperatures below −13°F (−25°C) for more than 7 days.
• Avoid leaving your vehicle for more than 14 days where the Li-ion battery available charge gauge reaches a zero or near zero (state of charge).
• Allow the vehicle and Li-ion battery to cool down after use before charging.
• Park/store your vehicle in cool locations out of direct sunlight and away from heat sources.
• Avoid sustained high battery temperatures (caused, for example, by exposure to very high ambient temperatures or extending highway driving with multiple quick charges (if so equipped))
• Use the normal charging or trickle charging methods to charge the Li-ion battery and minimize the use of public Fast Charge or Quick Charger.
• Avoid repetitive charging of the Li-ion battery with high battery state of charge.
• Moderate driving.
• Use of ECO mode.
• Do not operate the charging timer repeatedly while the charge connector is connected to the vehicle after the Li-ion battery charging is completed. Doing so may discharge the 12-volt battery.
• The power of the Li-ion battery can be checked on the Li-ion battery available charge gauge. For additional information, refer to “Li-ion battery available charge gauge” in the “Instruments and controls” section of this manual.
LI-ION BATTERY MAINTENANCE

In addition to the regular maintenance recommended by NISSAN, the LEAF requires some special Li-ion battery inspections.

• For additional information, refer to the NISSAN Warranty Information Booklet for significant limitations, exclusions and possible voiding of your warranty resulting from failure to have these necessary inspections, repairs and/or adjustments performed.

• For additional information, refer to the NISSAN Service and Maintenance Guide for a detailed explanation of the Li-ion battery inspection and intervals.

METERS AND INDICATORS

The vehicle has two displays to provide information regarding vehicle operation:

• Upper display
• Lower display

Upper display

Master warning lights:
The master warning lights are located in the upper display.

The master warning lights illuminate when any warning lights or indicators illuminate in the lower display or when messages are displayed on the vehicle information display.

For additional information, refer to “Master warning light (red/yellow)” in the “Instruments and controls” section of this manual.

EV UNIQUE INFORMATION

EV Overview

EV-25
ECO indicator:
This indicator provides instant information about how efficiently the vehicle is being operated. You can see how changing your driving style or operation of vehicle accessories affects power consumption.

For additional information, refer to “ECO indicator” in the “Instruments and controls” section of this manual.

Lower display

Li-ion battery temperature gauge:
This gauge displays the temperature of the Li-ion battery.

For additional information, refer to “Li-ion battery temperature gauge” in the “Instruments and controls” section of this manual.

Power meter:
This meter displays the actual traction motor power consumption and the regenerative brake power provided to the Li-ion battery.

For additional information, refer to “Power meter” in the “Instruments and controls” section of this manual.
Driving range:
This indicator displays the estimated driving range (calculated based on a program that accounts for current driving style and operational conditions) that can be driven before recharging is necessary.
For additional information, refer to “Driving range” in the “Instruments and controls” section of this manual.

Li-ion battery available charge gauge:
This gauge displays the available Li-ion battery power remaining to drive the vehicle.
For additional information, refer to “Li-ion battery available charge gauge” in the “Instruments and controls” section of this manual.

Li-ion battery capacity level gauge:
This gauge displays the available capacity of the Li-ion battery remaining to store power.
For additional information, refer to “Li-ion battery capacity level gauge” in the “Instruments and controls” section of this manual.
Warning and indicator lights

The EV system uses the following EV specific warning and indicator lights:

1. Master warning light (red)
2. Master warning light (yellow)
3. 12-volt battery charge warning light
4. Plug-in indicator light
5. READY to drive indicator light
6. Power limitation indicator light
7. EV system warning light
8. Electric shift control system warning light
9. Brake system warning light (yellow)
10. Low battery charge warning light
11. Headlight warning light (if so equipped)
12. Approaching Vehicle Sound for Pedestrians (VSP) system warning light

For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.
The sound stops when the vehicle stops.
The sound does not stop with the vehicle in the R (Reverse) position even if the vehicle stops.

**WARNING**

- If the sound cannot be heard, pedestrians may not notice the oncoming vehicle, which may cause an accident resulting in serious injury or death. It is recommended that you immediately visit a NISSAN certified LEAF dealer for VSP system inspection.
- If the VSP system warning light illuminates while the power switch is in the ON position, or in the READY to drive position, it may indicate the VSP system is not functioning properly. Have the VSP system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service. For additional information, refer to “Approaching Vehicle Sound for Pedestrians (VSP) system warning light” in the “Instruments and controls” section of this manual.

**ELECTRIC SHIFT CONTROL SYSTEM**

This vehicle is equipped with an electric shift control system. This control system has three features:

- Smooth and easy shift lever operation.
- To place the vehicle in the P (Park) position, push the P (Park) position switch on the shift lever.
- The vehicle automatically applies the P (Park) position when the power switch is placed in the OFF position.

For additional information, refer to “Driving the vehicle” in the “Starting and driving” section of this manual.

**LED HEADLIGHT (LOW BEAM) (IF SO EQUIPPED)**

This vehicle uses an LED headlight for the headlight low beam. The LED headlight has the following features:

- Low power consumption
- The shape is very compact.

It is recommended that you visit a NISSAN certified LEAF dealer to replace the headlight.
SOLAR CELL MODULE (IF SO EQUIPPED)

This vehicle uses a solar cell module to provide power to the 12-volt battery. The solar cell module only provides power to help maintain the charge of the 12-volt battery; it will not recharge a discharged 12-volt battery.

The solar cell module does not provide power to the Li-ion battery.

For additional information, refer to "Cleaning exterior" in the "Appearance and care" section of this manual.

NOTE:
The solar cell may not provide full charging power in the following situations:
• When the intensity of sunlight is weak.
• When the solar cell module is in the shade.
• When the solar cell module is covered by leaves or dirt.

DRIVING RANGE (IF SO EQUIPPED)

On the navigation system screen, you can check the estimated distance the vehicle may be driven with the available Li-ion battery charge. For additional information, refer to the LEAF Navigation System Owner’s Manual.

PRECAUTIONS ON CHARGING

WARNING

- If you use any medical electric devices, such as an implantable cardiac pacemaker or an implantable cardiovascular defibrillator, check with the electric medical device manufacturer concerning the effects that charging may have on implanted devices before starting the charge operation. Charging may affect the operation.
- Make sure there is no water or foreign materials in the charge port, charge connector or electrical plug, and that they are not damaged or affected by rust or corrosion. If any of these conditions are noticeable, do not charge the Li-ion battery. This may result in a short circuit or electric shock and could cause a fire which may result in serious personal injury or death.
- To avoid serious personal injury or death when the Li-ion battery is charging, be aware of the following precautions.
  - Do not touch the metal contacts of the charge port, charge connector or electrical plug.
  - Do not touch the vehicle and charger when there is lightning. A lightning strike may back feed into the charger causing damage and possible personal injury or death.
  - Make sure the charge connector is removed from the charge port before starting your vehicle. If the charge connector is only partially engaged and the connector latch is unlocked, it is possible to place the EV in the READY to drive position.
  - Do not plug in or unplug the plug with wet hands and do not stand in water, liquid or snow. This may cause an electric shock which may result in serious personal injury or death.
  - Do not disassemble or modify the charge port or the EVSE (Electric Vehicle Supply Equipment). This may cause a fire.
  - If you notice an unusual odor or smoke coming from the vehicle, stop charging immediately.
  - Be careful not to allow your hands, hair, jewelry or clothing to come into contact with, or get caught in, the traction motor cooling fan. The cooling fan can start at any time during charging.

CAUTION

- To prevent damage to the charging equipment:
  - Do not close the charge port lid without closing the cap.
  - Do not subject the charging equipment to impact.
  - Do not pull or twist the charge cable.
  - Do not drag the charge cable.
  - Do not store and use charging equipment in locations where the temperature is over 185°F (85°C).
- Do not place the charging equipment close to a heater or other heat source.

- Make sure the cap is closed on the charge port when charging is finished. If the charge port lid is closed when the cap is open, water or foreign materials may enter the charge port.

- Do not charge when a vehicle body cover is in use. This may cause damage to the charge connector.

- Do not attempt to perform a jump start on the 12-volt battery at the same time that the Li-ion battery is being charged. Doing so may damage the vehicle or charging equipment and could cause an injury. For additional information, refer to “Jump starting” in the “In case of emergency” section of this manual.

- Trickle charging is performed using the EVSE (Electric Vehicle Supply Equipment) provided with the vehicle. NISSAN recommends using an AC 110 - 120 volt, 15A, dedicated electrical circuit and outlet. The dedicated circuit is used to help prevent circuit damage or the circuit breaker from tripping due to the high draw of charging the Li-ion battery. If the dedicated circuit is not used, the circuit may cause adverse interference on MCB (Moulded Circuit Board) and household electrical appliances such as televisions and audio systems. If the circuit is shared, and another electrical device is being used at the same time the vehicle is charging, the breaker may trip. A licensed professional electrician should install a dedicated circuit if one is not already available.

- If the charger is connected to the vehicle when it is in the READY to drive position, the power switch automatically changes to the ON position. Place the power switch in the OFF position to begin charging.

- For your safety, if the charger is connected to the vehicle while the power switch is in the READY to drive position, the vehicle will automatically switch to the ON position. Because charging will not be started while the power switch is in this position, be sure to place the power switch in the OFF position.

- When the ambient temperature is 32°F (0°C) or less, charging time may be longer than normal and the level to which the Li-ion battery can be charged may be less than at higher temperatures.

- Do not operate the charging timer repeatedly while the charge connector is connected to the vehicle after the Li-ion battery charging is completed. Doing so may discharge the 12-volt battery. For additional information, refer to “Charging timer” in this section. If the Li-ion battery becomes discharged, charge it immediately.

NOTE:

- When charging the Li-ion battery, place the power switch in the OFF position. When the power switch is in the ON position, the Li-ion battery will not start charging.
The power switch can be set to the ON position and the climate control and navigation system (if so equipped) can be used while the Li-ion battery is charging. However, because these operations consume Li-ion battery power, it will take longer for the Li-ion battery to become fully charged. Place the power switch in the OFF position to help reduce Li-ion battery charge time.

If electrical power is interrupted while charging, charging restarts automatically when the electrical power is restored.

It is recommended to keep the charge cable connected to save Li-ion battery power, when the heater and air conditioner are operating with remote operation (models with navigation system).

If the charge port is frozen, melt the ice using a hair dryer. After the ice has melted, charge the Li-ion battery. Forcing the charge connector to connect may cause a malfunction.

If foreign materials have entered the charge connector and charge port and it is not possible to connect it, do not attempt to force the connection. It is recommended that you visit a NISSAN certified LEAF dealer. Forcing the charge connector to connect may cause damage to the charging equipment and vehicle.

There is a hole on the charge port for water drainage. If the water drainage hole becomes blocked, or if water gets trapped inside the charge port, do not charge. It is recommended that you visit a NISSAN certified LEAF dealer.
## TYPES OF CHARGE AND HOW TO CHARGE THE LI-ION BATTERY

The following 3 methods can be used for recharging the Li-ion battery.

<table>
<thead>
<tr>
<th>Types of Charge</th>
<th>Charge port</th>
<th>Charge connector</th>
<th>Power</th>
<th>Charging</th>
<th>Battery type</th>
<th>Estimated charging time</th>
</tr>

*Charging CH-5*
CH-6 Charging

Charging time information

- **Normal charge**: 30 kWh Battery. Approximately 5.5 to 9.5 hours (depending on the charger).
- **Trickle charge**: 30 kWh Battery. Approximately 25 hours.
- **Quick charge (if so equipped)**: 30 kWh Battery. Approximately 30 minutes.

* Low battery charge warning light is ON.
This vehicle is an electric vehicle and it requires electricity to operate. The Li-ion battery is the only source of power to operate the vehicle. It is important to conserve power and plan your charging needs when you drive to avoid completely discharging the Li-ion battery and being unable to drive.

There are three methods available to charge the Li-ion battery:

- Normal charge
- Trickle charge
- Quick charge (if so equipped)

The time to completely charge the vehicle Li-ion battery varies based on the state of charge of the Li-ion battery, condition and age of the Li-ion battery, ambient temperature and condition of the power source connected to the vehicle. The charging times provided in this manual are estimates only and may vary.

**Normal charge**

NISSAN recommends using normal charging for usual charging of the vehicle. Use of quick charge should be minimized in order to help prolong Li-ion battery life.

Normal charging uses an SAE J1772 compliant charging device that can be installed on a dedicated 220V/240V circuit in your home. NISSAN recommends the installation of a home charging dock by a licensed professional electrician. NISSAN has contracted with a company to assist you in purchasing and installing a charger. It is recommended that you visit a NISSAN certified LEAF dealer for additional information.

It takes approximately 5.5 to 9.5 hours (depending on the charger) in order to charge the Li-ion battery from discharged (low battery charge warning light illuminated) to 100% charged.

For additional information, refer to “How to normal charge” in this section.

**Trickle Charge**

Trickle charging is not recommended for regular use. Trickle charge can be used when it is necessary to perform an emergency charge at a destination such as a friend’s house.

Trickle charge uses the EVSE (Electric Vehicle Supply Equipment) or an SAE J1772 compliant cord set to connect the vehicle to an AC 110–120 volt, 15A dedicated outlet. The outlet should be protected by a circuit breaker or fuse to avoid overloading the circuit or other electrical hazard.

It takes approximately 26 hours to charge the Li-ion battery from discharged (low battery charge warning light illuminated) to 100% charged.

For additional information, refer to “How to trickle charge” in this section.

**Quick charge (if so equipped)**

Quick charge capability is only available on vehicles manufactured with the quick charge option, which includes the quick charge port. If your vehicle does not have such a port, quick charging cannot be used.
A vehicle equipped with a quick charge port is compatible with most CHAdeMO (Japanese industry standard) connectors on charging stations. Charging stations using this standard are UL certified and safe to use in the US. While supported by NISSAN, this connector may not become the US SAE standard.

Quick charging is possible (even several times a day) if the battery temperature is not near the red zone. If the battery temperature reaches the red zone, in order to protect the battery, quick charging is not allowed and the power limitation mode will be triggered.

Public charging:

This vehicle is compatible with any public charging station that is SAE J1772 compliant. If you attempt to charge from a non-compliant charging station, you may not receive a complete charge, or you may not be able to charge at all due to hardware and software differences. NISSAN is working with states, municipalities, utility companies and others to assist in the preparation of markets and infrastructure. However, NISSAN makes no representations that public charging stations will be available in locations where you wish to operate the vehicle, nor can NISSAN predict the period of time it may take for public charging infrastructure to be developed in your area. Depending on where you live or drive, there may not be sufficient public charging stations available to meet your particular needs for driving range and charging away from your home. Trip planning is therefore important, and you should plan trips with these facts in mind.

Quick charge uses public charging stations (up to 50 kW of power).

The time needed to charge the Li-ion battery from discharged (low battery charge warning light illuminated) to 80% charged using the quick charger depends on many factors including the Li-ion battery temperature and the type of quick charger used.

It may take more time to charge the Li-ion battery using the quick charger if the vehicle is parked in a cold location (for example, below 32°F (0°C)) for a long time.

A Li-ion battery temperature gauge can be used to estimate the approximate time needed to charge the Li-ion battery to 80%.

<table>
<thead>
<tr>
<th>Li-ion battery temperature gauge</th>
<th>Estimated charge time</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>More than approximately 90 minutes</td>
</tr>
<tr>
<td>B</td>
<td>Approximately 30-90 minutes</td>
</tr>
<tr>
<td>C</td>
<td>Approximately 30 minutes</td>
</tr>
<tr>
<td>D</td>
<td>Approximately 30-60 minutes</td>
</tr>
<tr>
<td>E</td>
<td>More than approximately 60 minutes</td>
</tr>
</tbody>
</table>
NOTE: Charging time is typically limited to 60 minutes when using a quick charger. Push the start switch on the quick charger after it stops if additional charge time is necessary to reach an 80% charge.

For additional information, refer to “How to quick charge” in this section.

Power Limitation Mode
This mode protects the health and operation of the vehicle’s Li-ion battery. This mode operates in certain extreme conditions (heat, cold, low state of charge). Power available to vehicle systems, including its traction motor, is limited resulting in limited performance, acceleration and top speed. Charging may be automatically terminated, especially with repeated quick charging in extreme hot weather.

Checking Li-ion battery charge
The three methods for checking the amount of charge are as follows:
• Check by using the Li-ion battery available charge gauge on the meter when the power switch is placed in the ON position. For additional information, refer to “Li-ion battery available charge gauge” and “Li-ion battery low charge warning” in the “Instruments and controls” section of this manual.
• Check by using an internet enabled smart phone or personal computer. For additional information, refer to the LEAF Navigation System Owner’s Manual (models with navigation system).
• Check by using the charging status indicator light. For additional information, refer to “Charging status indicator lights” in this section.

NOTE:
• During the charge operation, charge continues when the power switch is placed in the ON position.
• The Li-ion battery cannot be charged if the quick charge connector and the normal charge connector are connected at the same time. If another charge connector is connected mid-charge, charging will stop.
• For safety reasons, it is not possible to switch to the READY to drive position while a charge connector is connected.
• During charging, it is possible that the radio may be inaudible due to noise by the electromagnetic wave.

HOW TO NORMAL CHARGE

WARNING
• If you use any medical electric devices, such as an implantable cardiac pacemaker or an implantable cardiovascular defibrillator, check with the electric medical device manufacturer concerning the effects that charging may have on implanted devices before starting the charge operation. Charging may affect the operation.
• Be sure to follow the precautions for using the charger that can be installed in your home. Failing to do so could result in serious injury or death.

CAUTION
• Do not use any charging equipment that is not compatible with the LEAF. Doing so could prevent the Li-ion battery from charging properly or could result in damage to the vehicle or Li-ion battery.
• Normal charge uses the charging device (AC 220 - 240 volt, 16A or 32A) that can be installed in your home to charge the Li-ion battery.
• Immediate charge, charging timer and remote charge (models with navigation system) can be performed in the normal charge mode. For additional information, refer to “Charging methods” in this section.

• The Genuine NISSAN charging equipment communicates with the vehicle before Li-ion battery charging starts. If this communication does not occur because other equipment is used, the Li-ion battery will not charge.

• NISSAN recommends that you connect the normal charge cable when getting out of the vehicle, even if it is not going to be used. By doing this, you can get the most out of the remote climate control (models with navigation system) and Climate Ctrl. Timer functions the next time you use the vehicle.

To start normal charge:

1. Push the P (Park) position switch to place the vehicle in the P (Park) position and apply the parking brake.

2. When charging the Li-ion battery, place the power switch in the OFF position. When the power switch is in the ON position, the Li-ion battery will not start charging.

3. Open the charge port lid and charge port cap. For additional information, refer to “Charge port lid” and “Charge port cap” in the “Pre-driving checks and adjustments” section of this manual.

4. Connect the charge connector to the charge port. If it is connected normally, a beep will sound once.

5. If charging has started or if the battery is waiting for the charging timer, a beep will sound twice and the charging status indicator light display will change. For additional information, refer to “Charging status indicator lights” in this section.
To stop normal charge:
1. Ensure that the charge connector lock is not engaged. For additional information, refer to “Charge connector lock switch” in this section.
2. Press the button on the charge connector, release the lock and remove the charge connector from the charge port and properly store it.
3. After closing the charge port cap on the charge port, close the charge port lid.

NOTE:
To stop charging mid-charge, remove the charge connector. Charging automatically stops.

HOW TO TRICKLE CHARGE

**WARNING**

- If you use any medical electric devices, such as an implantable cardiac pacemaker or an implantable cardiovascular defibrillator, check with the electric medical device manufacturer concerning the effects that charging may have on implanted devices before starting the charge operation. Charging may affect the operation.
- In order to avoid an electric shock or fire due to a short circuit, connect to a GFI (Ground Fault Interrupter) circuit breaker and use a waterproof electrical ground socket.
- The NISSAN Genuine EVSE charging device provided with your vehicle draws 12 amps continuously while charging the Li-ion battery. Do not plug in to any electrical circuit unless it is inspected by a licensed electrician to confirm that the electrical circuit can accept a 12 amp draw. Any electrical circuit has a much higher likelihood of being compromised in the following conditions listed below.
  - Improper use of the charger may result in a fire and serious injury or death.
  - Do not use this charger in structures more than 40 years old.
  - Do not use this charger in structures using fuse-based circuit protection. Use only with electrical circuits protected by circuit breakers.
  - Do not use this charger on electrical circuits with two-prong outlets.
  - Do not use charger if outlet appears damaged or will not hold plug firmly.
  - Discontinue charger use immediately if plug or outlet becomes hot to the touch or if you notice any unusual odors.
  - Do not use charger if other devices are plugged into the same circuit.
  - Never use extension cords or plug adapters with charger.
  - Do not operate with a damaged cord.
  - Always unplug with a damaged cord.
  - When unplugging, be sure to pull by the plug and not the cord.
– The device has parts that may spark inside. Do not use it where gasoline, paint, or flammable liquids are used or stored.

– Do not use if a malfunction occurs or if the charger has been damaged in any manner. It is recommended that you visit a NISSAN certified LEAF dealer for replacement.

– The charger contains no user-serviceable parts. Do not attempt to repair the charger, doing so will void your warranty.

• Pass the lower side belt of the EVSE case securely through the fastener on the bottom of the luggage board. If the case suddenly becomes loose, it may cause serious injury or death.

**CAUTION**

• Only charge using a standard 110 - 120 volt, 15A dedicated electrical outlet (for example, do not use an electric generator). Failure to do so may cause charging to fail and could cause damage to the Li-ion battery charging equipment due to power surges.

• NISSAN recommends using Genuine NISSAN charging equipment to charge the vehicle. Using non-NISSAN equipment could cause the Li-ion battery to not charge correctly and may damage the Li-ion battery.

• Trickle charging is performed using an AC 110 - 120 volt, 15A dedicated electrical outlet using the EVSE provided with the vehicle.

• The Genuine NISSAN EVSE charging equipment or trickle charge cable performs a communication function with the vehicle before Li-ion charging starts. If this communication does not occur because other equipment is used, the Li-ion battery will not charge.

• Immediate charge, charging timer and remote charge (models with navigation system) can be performed in the trickle charge mode. For additional information, refer to “Charging methods” in this section.
To start trickle charging:

You can pass a rope through the hole A on the control box in order to hang it up while the Li-ion battery is charging.

1. Push the P (Park) position switch to place the vehicle in the P (Park) position and apply the parking brake.
2. When charging the Li-ion battery, place the power switch in the OFF position. When the power switch is in the ON position, the Li-ion battery will not start charging.
3. Open the charge port lid. For additional information, refer to “Charge port lid” in the “Pre-driving checks and adjustments” section of this manual.
4. Take out the EV or trickle charge cable from the rear hatch.
5. Connect the electrical plug to the 110 - 120 volt, 15A dedicated electrical outlet. If it is connected normally, the green light on the EV control box indicator light illuminates.
6. Open the charge port cap. For additional information, refer to “Charge port cap” in the “Pre-driving checks and adjustments” section of this manual.
7. Remove the safety cap from the charge connector.
8. Connect the charge connector to the charge port. If it is connected normally, a beep will sound once.

9. If charging has started, or if the Li-ion battery is waiting for the charging timer, a beep will sound twice and the charging status indicator light display will change. For additional information, refer to “Charging status indicator lights” in this section.

10. When recharging outside, such as in your driveway, use a commercially available pad-lock attached in position A to prevent theft.

To stop trickle charge:
1. Ensure that the charge connector lock is not engaged. For additional information, refer to “Charge connector lock switch” in this section.
2. Press the button on the charge connector, release the lock and remove the charge connector from the charge port.
3. Attach the safety cap to the EVSE.
4. Remove the electrical plug from the AC 110 - 120 volt, 15A dedicated electrical outlet.
5. Store in its case.

**NOTE:**
Perform the following procedure to store the EVSE in the case.

a. Wind the charge cable into a size that will allow it to be stored in the case (approximately 9.8 in (250 mm) in diameter).

b. Place the EVSE control box into the back of the case.

c. Place the charge cable and charge connector into the case in front of the EVSE control box.

6. After closing the cap on the charge port, close the charge port lid.

**NOTE:**
To stop charging mid-charge, remove the charge connector. Charging automatically stops.

**WARNING**
Pass the lower side belt of the EVSE case securely through the fastener on the bottom of the luggage board. If the case suddenly becomes loose, it may cause serious injury or death.

**HOW TO QUICK CHARGE (IF SO EQUIPPED)**
Quick charge uses public charging stations (up to 50 kW of power) to charge the battery in a short period of time.

**WARNING**
- Always use a quick charger that is compatible with the LEAF. Using an incompatible quick charger may cause a fire or malfunction resulting in serious personal injury or death.
- Before starting the quick charge, carefully read the instructions provided on the quick charger and make sure the quick charge connector is properly connected and locked. Failure to connect or operate the quick charger correctly could cause damage to the vehicle or the charging equipment.
NOTE:
Quick charging is possible (even several times a day) if the battery temperature is not near the red zone. If the battery temperature reaches the red zone, in order to protect the battery, quick charging is not allowed and the power limitation mode will be triggered.
When the Li-ion battery available charge and the Li-ion battery capacity are shown on the quick charger unit, the readings may differ from the Li-ion battery available charge/capacity reading shown on the vehicle’s display.

To start charging:

1. Push the P (Park) position switch to place the vehicle in the P (Park) position and apply the parking brake.
2. When charging the Li-ion battery, place the power switch in the OFF position. When the power switch is in the ON position, the Li-ion battery will not start charging.
3. Open the charge port lid and charge port cap. For additional information, refer to “Charge port lid” and “Charge port cap” in the “Pre-driving checks and adjustments” section of this manual.

4. Align ① with the groove of the charge port and insert the charge connector.
5. Grasp the lock lever and lock the charge connector.

6. Follow the instructions on the quick charge equipment to start charging. When the equipment is properly installed and ready to charge, a beep sounds twice and the charging status indicator light will change. For additional information, refer to “Charge status indicator lights” in this section.

Charging ends in the following situations:
• When charging is complete
• When charging time has exceeded 60 minutes
• When the possible charge time set for the quick charger is exceeded

NOTE:
• Charging may automatically stop even if it is not completed.
• If charging stops mid-charge, you can restart charging by pressing the start button on the quick charger again.
• The charge connector is locked to the charge port during charging and cannot be disconnected. Follow the instructions on the quick charge equipment to stop charging. Confirm charging is stopped by looking at the indicators on the dash. The charge connector can be disconnected from the vehicle when charging is stopped.
• When quick charging, the Li-ion battery charging rate is slower as the percentage of available battery charge increases.
To finish charging:

1. Confirm charging is stopped by looking at the indicators on the dash. The charge connector can be disconnected from the vehicle when charging is stopped.
2. Unlock the charge connector, remove from the vehicle and properly store it.
3. Close the quick charge port cap.
4. Shut the charge port lid.

**CAUTION**
- As the quick charge connector is heavier in comparison to the other charge connectors, allowing it to drop could cause damage to the vehicle or charge connector or personal injury. When removing the connector, be sure to pull it out straight and as carefully as possible.

**CHARGE CONNECTOR LOCK SWITCH**

The normal or trickle charge connector can be locked to the normal charge port. The charge connector lock mode can be selected by using the charge connector lock switch, AUTO, LOCK and UNLOCK.

**NOTE:**
- The charge connector lock can be activated when the shift lever is in the P (Park) position and the charge connector is connected. The charge connector lock will not be activated if the charge connector is not properly connected.
AUTO mode
To select AUTO mode, push the AUTO side ① of the charge connector lock switch. The indicator light on the switch ③ will illuminate.
When AUTO mode is selected, the charge connector is locked while charging is in process. The charge connector will be unlocked automatically when charging is complete.

LOCK mode
To select the LOCK mode, push the LOCK side ② of the charge connector lock switch. The indicator light on the switch ④ will illuminate.
When LOCK mode is selected, the charge connector will remain locked. The charge connector will be unlocked when UNLOCK mode is selected or temporary unlock operation is performed.

UNLOCK mode
To select UNLOCK mode, return the charge connector lock switch to the level position. Make sure the indicator light on the switch turns off.
When UNLOCK mode is selected, the charge connector will remain unlocked.
Temporary unlock position:
When the charge connector lock switch is in the AUTO or LOCK position, the charge connector lock can be unlocked temporarily by using the NISSAN Intelligent Key® or the charge port lid opener switch.

Unlock operation using Intelligent Key
1. Press the charge connector unlock button on the Intelligent Key for more than 1 second.
2. The charging status indicator light flashes three times and a beep sounds three times. The charge connector lock is unlocked for 30 seconds.
3. After 30 seconds, the charge connector lock is locked.
The charge connector lock can also be unlocked for 30 seconds when unlocking a door or the rear hatch (in this case, the charging status indicator light does not operate). If the lock is operated again within 30 seconds after unlocking the door/rear hatch, the charge connector lock is locked again.

Charging  CH-19
Unlock operation using charge port lid opener switch

1. Push the charge port lid opener switch.
2. The charging status indicator light flashes three times and a beep sounds three times. The charge connector lock is unlocked for 30 seconds.
3. After 30 seconds, the charge connector lock is locked.

NOTE:
• Depending on the charging station, the lock mechanism established by local standards may not be compatible with your vehicle. It may not be possible for the charge connector to lock to your vehicle.
• When the power source is cut off while charging in AUTO mode, the connector will be continuously locked for 5 minutes, then it will be released.
• When timer charging is set with AUTO mode, the connector will not lock until charging is started.
• In AUTO mode, the charge connector lock will only lock during normal charging.
• When the following system(s) are operated individually or the 12-volt battery is being charged, the charging connector lock will not lock:
  – Climate Ctrl. Timer
  – Remote climate control (if so equipped)
  – Li-ion battery warmer (if so equipped)

If the charge connector cannot be unlocked
1. Place power switch in the OFF position.
2. Open the hood.
3. Insert a flat head screwdriver or suitable tool into the screw that is located on the front of the hood lock.
4. Turn it clockwise to release the charge connector lock.
5. Remove the charge connector.
Use charging timer to schedule when the Li-ion battery charges. The vehicle automatically begins charging at the scheduled times when the charge connector is connected to the vehicle. The timers do not need to be reset each time the Li-ion battery needs charging.

With navigation system (if so equipped)

The charging timer can save two timer settings that include the charging start time and end time. The charging timer can be applied to one of the timer settings for each day of the week.

The vehicle automatically begins charging at the scheduled times when the charge connector is connected to the vehicle. The timers do not need to be reset each time the Li-ion battery needs to be charged.

1. Push \( \text{Charging Timer} \) and touch “Charging Timer.” Touch “Estimated Time” to view approximate time required to reach 100% charge.
2. Touch “Edit Schedule.” Timer charge setting screen is displayed.
3. Set preferred time and day of the week for vehicle charging.
4. After entering the information, touch “Save.” A confirmation screen is displayed.
5. Touch “OK” to confirm the setting, push the power switch to the OFF position, and then connect the charge connector to the vehicle.

NOTE:

- Always place the power switch in the OFF position after setting the charging timers. When the power switch in the ON position, the Li-ion battery will not start charging.
- The Li-ion battery may not be charged to the expected level if the charging timer start time and end time are set so there is not enough time to charge the Li-ion battery.
- When either the charge start time or charge end time is set, the charging timer function is activated.
- When only the charging timer end time is set, the system automatically determines when to begin charging. The Li-ion battery may not be charged to the expected level in the following conditions:
  - The Li-ion battery is charged in cold weather.
  - The charge connector is connected to the vehicle too close to the scheduled charging end time.
• When only the charging timer end time is set, the system automatically stops charging when the Li-ion battery charges to a full charge. Charging may stop before the scheduled end time.

• If the charging timer and the Climate Ctrl. Timer are operating at the same time due to an overlap of the timer settings, you can prioritize which function receives electrical power first. For additional information, refer to the LEAF Navigation System Owner’s Manual.

• When charging is set as the first priority, the Climate Ctrl. Timer does not start until 10 segments (80%) of the Li-ion battery available charge gauge are illuminated.

• Even when the climate control is set as the first priority, the climate control system will be turned off when the electric demands of the climate control system are more than can be provided to the Li-ion battery for charging.

• Some charging stations used to perform normal charge are equipped with timer functions. If the charger timer function and the vehicle timer are both set, and the two timers are not set to operate at the same time, it is possible that the charger will not start or the battery will not be charged to the level expected.

• If the Li-ion battery warmer (if so equipped) is operating while the Climate Ctrl. Timer or remote climate control is being used, performance of the climate control system will be reduced.

• The Li-ion battery may not charge to the expected level using the Charging Timer when a [Start time] and [End time] are set while the Li-ion battery warmer (if so equipped) operates.

• Set only the Charging Timer End time when charging in cold weather. The vehicle automatically determines when to start charging to fully charge the Li-ion battery, even if the Li-ion battery warmer (if so equipped) operates. Charging ends before the set End time if the Li-ion battery is fully charged.

• The 12-volt battery can become discharged if the charging timer is operated repeatedly between the Li-ion battery charges when the vehicle is not used for an extended period of time.

• Charging timer is performed according to the current time setting on the bottom left of the display. When setting the charging timer function, be sure to check that the current time displayed is correct.

• To turn off the charging timer function, touch ON on the timer charge setting screen until the indicator lights are turned off. Touch SAVE to apply the change. If the settings shown on the screen are correct, touch OK. After this operation has been performed, the indicator disappears and the charging timer function is turned off. The start and end time settings are not deleted, even if the charging timer function is turned off.

• If the day of the week is not selected on the timer charge setting screen, the charging timer will not operate on that day. The system will wait until the next set charging time to perform charging.
Timer Charge setting screen:

Two different timer settings can be registered (one on the left side and another on the right side of the screen).

1. Touch to turn on/off the timer. The indicator light will turn on when the timer setting is turned on.
2. Indicates start/end time of the scheduled timer charge.
3. Touch corresponding keys to adjust the time setting.
   • -: Touch or touch and hold to decrease the time.
   • +: Touch or touch and hold to increase the time.
   • x: Touch to delete the numbers entered in the corresponding column.
4. Touch the keys to set the days of the week you wish to start charging.
5. Touch to save the settings.

Without navigation system

NOTE:
• For the charging timer of models without navigation system, it allows only the time that the charging is to STOP to be set and does not allow the charge START time to be set. Set the charging end time. The vehicle automatically calculates when to start charging based on the condition of the power source and the estimated time required for charging to a full level.
• When the Charging Timer and the Climate Ctrl. Timer are set at the same time, the charging start time moves to an earlier time.

• Depending on the Li-ion battery condition and the power source status, charging may end earlier than the charging end time. This is not a malfunction.

1. Push the 🔄 switch A on the left side of the combination meter panel.

2. Push the ● switch B to highlight “Charging Timer” on the vehicle information display and then push the switch.

3. The “Charging Timer” screen is displayed. To change the time or turn the timer on or off, push the ● switch.
To turn the timer on or off, use the \[\text{\textbullet}\] switch to highlight “On” or “Off” and then push the \[\text{\textbullet}\] switch. If “On” is selected, an additional screen is displayed that allows you to change the time of the charging timer.

4. The hour portion of the time is highlighted on the screen. Push the \[\text{\textbullet}\] switch to change the hour field in increments of one hour. Push the \[\text{\textbullet}\] switch to move to the minutes field.

5. Push the \[\text{\textbullet}\] switch to change the minute field in increments of ten minutes. Push the \[\text{\textbullet}\] switch to finish setting the charging timer.

IMMEDIATE CHARGE

When a charging timer is not turned on, charging automatically starts when a normal or trickle charge connector is connected to the vehicle.

Use the immediate charge mode anytime you want to start charging when a charging timer is turned on by performing the following:

1. Place the power switch in the OFF position.
2. Push the immediate charge switch.
3. Connect the normal or trickle charge cable when the charging status indicator light changes to display immediate charge mode. For additional information, refer to “Charging status indicator lights” in this section.

NOTE:
• You have 15 minutes to connect a normal or trickle charge connector to the vehicle after the immediate charge switch is pushed. If a charge connector is not connected to the vehicle within 15 minutes, the vehicle automatically returns to the previous setting.
• Immediate charge will be available for 15 minutes before returning automatically to the previous setting.
• To cancel immediate charge mode push the immediate charge switch again.
• If the charge cable is disconnected, the Li-ion battery automatically switches to charging timer. To perform an immediate charge again, push the immediate charge switch and connect the charge cable.
• If the charge cable is already connected, push the immediate charge switch to start performing an immediate charge.

CHARGING RELATED REMOTE FUNCTION (MODELS WITH NAVIGATION SYSTEM)
This vehicle incorporates a communication device that is called a TCU (Telematics Communication Unit). The communication connection between this unit and NISSAN Data Center allows for various remote function services.

• **Li-ion battery status check:**
  The charging status of the Li-ion battery can be checked using your personal computer or internet enabled smart phone even if you are not in the vehicle.

• **Remote charge:**
  The function of starting the Li-ion battery charge or starting the heater and air conditioner is available using your personal computer or internet enabled smart phone.

• **Unplugged status:**
  A notification e-mail will be sent to your personal computer or internet enabled smart phone if the plug is not connected at the specific time you selected, after turning off the power switch.
NOTE:

• Establishing the NissanConnect\textsuperscript{SM} EV service is necessary before using this service. For additional information, refer to the LEAF Navigation System Owner's Manual.

• To check the Li-ion battery charging status using an internet enabled smart phone or personal computer, the following conditions must be met:
  – The vehicle must be located in a cellular phone coverage area.
  – The cellular phone must be located in an area with cellular phone coverage.
  – If using a computer, the computer must be connected to the internet.
  – Some cellular phones are not compatible and cannot be used to check the Li-ion battery charging status. Please confirm beforehand.

• Certain remote functions require a compatible smart phone, which is not included with the vehicle.

• NissanConnect\textsuperscript{SM} EV information system features are included through a subscription service which requires owner consent to activate. The subscription must be active to use these features.

• NissanConnect\textsuperscript{SM} EV communications may be received at a verified e-mail address or by SMS/text messaging-enabled mobile phone.

• Standard text rates and/or data usage may apply depending on your carrier.

CHARGING STATUS INDICATOR LIGHTS

The charging status indicator lights 1 to 3 display the charging status, and are visible from both inside and outside the vehicle.
When the normal charge connector lock is unlocked
All of the indicator lights, ① to ③, will flash and a beep will sound three times when the normal charge connector lock switch on the Intelligent Key or the charge port lid opener switch is pushed.

When the normal charge connector is connected incorrectly
All of the indicator lights, ① to ③, will flash and a beep will sound three times within 30 seconds when the charge connector is connected incorrectly to the normal charge port.

Ready for charging timer
If the charging timer is set, the indicator lights illuminate in order from ① to ③. The indicator lights turn off after approximately 5 minutes.

Ready for immediate charge
When the power switch is off and if the immediate charge switch is pushed while the charge cable is not connected, the indicator light ② illuminates.
This indicator light ② illuminates when the vehicle is ready for immediate charge. You have 15 minutes to connect the charge connector to the vehicle. If the charge connector is not connected within 15 minutes, the indicator light ② turns off and you must start the immediate charge mode again to charge the Li-ion battery.
When charging

When the Li-ion battery is being charged, the charging status indicator lights will change depending on the amount the Li-ion battery is charged.

*: This value is also displayed by the illumination of segments of the Li-ion battery available charge gauge on the instrument panel.

When fully charged

All of the indicator lights 1 to 3 illuminate when the Li-ion battery is fully charged to the selected charging mode level. The indicator lights turn off after approximately 5 minutes or when the charge connector is removed.

When the indicator light 3 flashes

The indicator light 3 flashes when the 12-volt battery is being charged. For additional information, refer to “Charging the 12-volt battery” in the “EV overview” section of this manual.
The indicator will also flash for up to 5 minutes if the electrical power to the EVSE is interrupted during charging. Charging will restart automatically when the electrical power to the EVSE is restored if the charging connector is connected. The charge start beep will not sound when charging restarts.

The indicator will also flash when the following systems are operating:

• Climate Ctrl. Timer
• Remote climate control (if so equipped)
• Li-ion battery warmer (if so equipped)

When not charging

None of the lights are illuminated when the Li-ion battery and 12-volt battery are not charging.

EVSE (ELECTRIC VEHICLE SUPPLY EQUIPMENT) CONTROL BOX INDICATOR LIGHT

When a trickle charge is being performed, the charging status is shown by the indicator light that is on the EVSE control box.

An indicator light also indicates if there is an EVSE malfunction.
READY | CHARGE | FAULT | Status and action to be taken
--- | --- | --- | ---
○ | ○ | ○ | Every time the EVSE plug is connected to an outlet, all indicator lights illuminate for 0.5 seconds.
○ | ● | ● | After initial processing is completed, when the EVSE is not connected to the vehicle, or the EVSE is connected to the vehicle but charging is not being performed.
○ | ○ | ● | While the battery is being charged.
○ | ● | ● | When the ground cable is disconnected.
 |  |  | Check the grounding of the outlet being used. If the grounding is normal, it is recommended that you visit a NISSAN certified LEAF dealer.
○ | ○ | ○ | When the temperature of the electrical plug is too hot, or the EVSE is unable to detect the temperature of the electrical plug, check that the electrical plug is connected correctly. If it is connected normally, stop use immediately. It is recommended that you visit a NISSAN certified LEAF dealer.
○ | ● | ○ | When an electric leakage occurs or the EVSE malfunctions.
 |  |  | Stop use immediately. It is recommended that you visit a NISSAN certified LEAF dealer.
○ | ● | ○ | When the EVSE malfunctions.
 |  |  | Stop use immediately. It is recommended that you visit a NISSAN certified LEAF dealer.
● | ● | ● | If the EVSE control box indicator light does not illuminate after connecting the plug to the outlet, check the GFCI and circuit breaker for the outlet. If either the GFCI or breaker has tripped, the circuit may not be suitable for use with EVSE. You should have a licensed electrician inspect and repair the electrical circuit. If the GFCI breaker is not tripped, stop using the EVSE. It is recommended that you visit a NISSAN certified LEAF dealer.

### CHARGING TROUBLESHOOTING GUIDE

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Charging cannot be performed.</td>
<td>The vehicle power switch is in the ON position.</td>
<td>Before charging, place the vehicle power switch in the OFF position.</td>
</tr>
<tr>
<td></td>
<td>Both the normal charge connector and the quick charge connector (if so equipped) are connected at the same time.</td>
<td>The normal charge connector and the quick charge connector cannot be connected at the same time.</td>
</tr>
<tr>
<td></td>
<td>The Li-ion battery is already fully charged.</td>
<td>Charging cannot be performed if the Li-ion battery is already fully charged. Charging automatically turns off if the Li-ion battery is fully charged.</td>
</tr>
<tr>
<td></td>
<td>The temperature of the Li-ion battery is too hot or cold to charge.</td>
<td>Confirm the Li-ion battery temperature by checking the Li-ion battery temperature gauge. If the gauge indicates the Li-ion battery is too hot (red zone) or too cold (blue zone), charging is not possible. Allow the Li-ion battery to cool or warm up before charging. For additional information, refer to &quot;Li-ion battery temperature gauge&quot; in the &quot;Instruments and controls&quot; section of this manual.</td>
</tr>
<tr>
<td></td>
<td>The 12-volt battery is discharged.</td>
<td>The Li-ion battery can be charged if the vehicle electrical systems cannot be turned on. If the 12-volt battery is discharged, charge or jump start the 12-volt battery. For additional information, refer to &quot;Jump starting&quot; in the &quot;In case of emergency&quot; section of this manual.</td>
</tr>
<tr>
<td></td>
<td>The vehicle has a malfunction.</td>
<td>The vehicle or charger may have a malfunction. Confirm if the warning light on the meter is illuminated. Confirm if the indicator on the charger is indicating a malfunction. If a warning is displayed, stop charging. It is recommended that you visit a NISSAN certified LEAF dealer.</td>
</tr>
<tr>
<td>Normal charge cannot be performed.</td>
<td>There is no electrical power coming from the outlet.</td>
<td>Confirm that there has not been a power failure. Make sure the breaker is on. If an outlet with a timer device installed is used, power will only be available at the time set by the timer.</td>
</tr>
<tr>
<td></td>
<td>The charge connector is not connected correctly.</td>
<td>Confirm the charge connector is connected correctly.</td>
</tr>
<tr>
<td>Immediate charge cannot be performed.</td>
<td>Charging timer has been set.</td>
<td>Turn off the charging timer. For additional information, refer to &quot;Charging timer&quot; in this section.</td>
</tr>
<tr>
<td></td>
<td>Charging does not start because the charge amount has been set to 80% and the Li-ion battery is already charged to more than 80%.</td>
<td>Confirm the charge percentage and if you need to charge the Li-ion battery more, change to the desired charge setting.</td>
</tr>
</tbody>
</table>
Charging timer cannot be performed.

<table>
<thead>
<tr>
<th>Reason</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>The charge cable is not connected.</td>
<td>Connect the charge cable.</td>
</tr>
<tr>
<td>The time on the clock is wrong.</td>
<td>The charging timer function does not start charging based on the clock located on the upper display. Confirm that the date and time shown on the charging timer screen are the same as the GPS time and date. If the 12-volt battery is discharged or if the Li-ion battery is disconnected, the time setting must be updated. There must be a GPS signal to adjust the timer setting clock.</td>
</tr>
<tr>
<td>The immediate charge switch has been pushed.</td>
<td>Charging timer does not operate when immediate charge is selected.</td>
</tr>
<tr>
<td>Charging timer has not been set.</td>
<td>Set the charging timer schedule. For additional information, refer to “Charging timer” in this section.</td>
</tr>
<tr>
<td>Charging does not start because the charging timer start time and end time are set and the current time is before the set start time.</td>
<td>Confirm when the charging timer time is set to start charging. Change the charging timer setting to the desired charge time or push the immediate charge switch. For additional information, refer to “Charging timer” in this section.</td>
</tr>
<tr>
<td>Charging does not start because only the charging timer start time is set and the current time is after the set start time.</td>
<td></td>
</tr>
<tr>
<td>Charging does not start because only the charging timer end time is set and the current time is after the set end time.</td>
<td></td>
</tr>
<tr>
<td>The charge cable is not connected.</td>
<td>Connect the charge cable beforehand.</td>
</tr>
<tr>
<td>Charging does not start because the charge amount has been set to 80% and the Li-ion battery is already charged to more than 80%.</td>
<td>Confirm the charge percentage and if you need to charge the Li-ion battery more, change to the desired charge setting.</td>

WARNING

• Do not ride in a moving vehicle when the seatback is reclined. This can be dangerous. The shoulder belt will not be against your body. In an accident, you could be thrown into it and receive neck or other serious injuries. You could also slide under the lap belt and receive serious internal injuries.

• For the most effective protection when the vehicle is in motion, the seat should be upright. Always sit well back and upright in the seat with both feet on the floor and adjust the seat properly. For additional information, refer to “Precautions on seat belt usage” in this section.

• After adjustment, gently rock in the seat to make sure it is securely locked.

• Do not leave children unattended in the seat. They could unknowingly activate switches or controls. Unattended children could become involved in serious accidents.

• To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

• Do not adjust the driver’s seat while driving so full attention may be given to vehicle operation. The seat may move suddenly and could cause loss of control of the vehicle.

• The seatback should not be reclined any more than needed for comfort. Seat belts are most effective when the passenger sits well back and straight up in the seat. If the seatback is reclined, the risk of sliding under the lap belt and being injured is increased.

CAUTION

When adjusting the seat positions, be sure not to contact any moving parts to avoid possible injuries and/or damage.

1-2 Safety–Seats, seat belts and supplemental restraint system
FRONT SEATS

Front manual seat adjustment

Your vehicle seats can be adjusted manually. For additional information about adjusting the seats, refer to the steps outlined in this section.

Forward and backward:

Pull the bar up and hold it while sliding the seat forward or backward to the preferred position. Release the bar to lock the seat in position.

Reclining:

To recline the seatback, pull the lever up and lean back. To bring the seatback forward, pull the lever up and lean your body forward. Release the lever to lock the seatback in position.

The reclining feature allows adjustment of the seatback for occupants of different sizes for added comfort and to help obtain proper seat belt fit. For additional information, refer to "Precautions on seat belt usage" in this section. Also, the seatback can be reclined to allow occupants to rest when the vehicle is stopped and the vehicle is in the P (Park) position.

Seat lifter (driver's seat):

Pull up or push down the adjusting lever to adjust the seat height to the preferred position.
REAR SEATS

Folding

Before folding the rear seats:
• Secure the seat belts on the seat belt hooks located on the side wall. For additional information, refer to “Seat belt hook” in this section.

To fold down the seatback, pull the release knob.
To return the seatback to the seating position, lift up each seatback and push it to the upright position until it is latched.

WARNING

• Do not fold down the rear seats when occupants are in the rear seat area or any objects are on the rear seats.
• Never allow anyone to ride in the cargo area or on the rear seats when they are in the folded-down position. Use of these areas by passengers without proper restraints could result in serious injury or death in an accident or sudden stop.

• Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.
• When returning the seatbacks to the upright position, be certain they are completely secured in the latched position. If they are not completely secured, passengers may be injured in an accident or sudden stop.

Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.
**HEAD RESTRAINTS/HEADRESTS**

**WARNING**

Head restraints/headrests supplement the other vehicle safety systems. They may provide additional protection against injury in certain rear end collisions. Adjustable head restraints/headrests must be adjusted properly, as specified in this section. Check the adjustment after someone else uses the seat. Do not attach anything to the head restraint/headrest stalks or remove the head restraints/headrests. Do not use the seat if the head restraint/headrest has been removed. If the head restraint/headrest was removed, reinstall and properly adjust the head restraint/headrest before an occupant uses the seating position. Failure to follow these instructions can reduce the effectiveness of the head restraint/headrest. This may increase the risk of serious injury or death in a collision.

The illustration shows the seating positions equipped with a head restraint/headrest.

- ▲ Indicates the seating position is equipped with a head restraint.
- + Indicates the seating position is not equipped with a head restraint or headrest (if applicable).

- Your vehicle is equipped with a head restraint/headrest that may be integrated, adjustable or non-adjustable.
- Adjustable head restraints/headrests have multiple notches along the stalks to lock them in a desired adjustment position.

- The non-adjustable head restraints/headrests have a single locking notch to secure them to the seat frame.

**Proper Adjustment:**
- For the adjustable type, align the head restraint/headrest so the center of your ear is approximately level with the center of the head restraint/headrest.
- If your ear position is still higher than the recommended alignment, place the head restraint/headrest at the highest position.

- If the head restraint/headrest has been removed, ensure that it is reinstalled and locked in place before riding in that designated seating position.
ADJUSTABLE HEAD RESTRAINT/HEADREST COMPONENTS
1. Removable head restraint/headrest
2. Multiple notches
3. Lock knob
4. Stalks

NON-ADJUSTABLE HEAD RESTRAINT/HEADREST COMPONENTS
1. Removable head restraint/headrest
2. Single notch
3. Lock knob
4. Stalks

REMOVE
Use the following procedure to remove the head restraint/headrest.
1. Pull the head restraint/headrest up to the highest position.
2. Push and hold the lock knob.
3. Remove the head restraint/headrest from the seat.
4. Store the head restraint/headrest properly in a secure place so it is not loose in the vehicle.
5. Reinstall and properly adjust the head restraint/headrest before an occupant uses the seating position.
INSTALL
1. Align the head restraint/headrest stalks with the holes in the seat. Make sure the head restraint/headrest is facing the correct direction. The stalk with the notch (notches) ① must be installed in the hole with the lock knob ②.
2. Push and hold the lock knob and push the head restraint/headrest down.
3. Properly adjust the head restraint/headrest before an occupant uses the seating position.

ADJUST
For adjustable head restraint/headrest
Adjust the head restraint/headrest so the center is level with the center of your ears. If your ear position is still higher than the recommended alignment, place the head restraint/headrest at the highest position.
For non-adjustable head restraint/headrest
Make sure the head restraint/headrest is positioned so the lock knob is engaged in the notch before riding in that designated seating position.
Raise
To raise the head restraint/headrest, pull it up.
Make sure the head restraint/headrest is positioned so the lock knob is engaged in the notch before riding in that designated seating position.

Lower
To lower, push and hold the lock knob and push the head restraint/headrest down
Make sure the head restraint/headrest is positioned so the lock knob is engaged in the notch before riding in that designated seating position.

SEAT BELTS
PRECAUTIONS ON SEAT BELT USAGE
If you are wearing your seat belt properly adjusted, and you are sitting upright and well back in your seat with both feet on the floor, your chances of being injured or killed in an accident and/or the severity of injury may be greatly reduced. NISSAN strongly encourages you and all of your passengers to buckle up every time you drive, even if your seating position includes a supplemental air bag.

Most U.S. states and Canadian provinces or territories specify that seat belts be worn at all times when a vehicle is being driven.
Sit upright and well back.
WARNING

- Every person who drives or rides in this vehicle should use a seat belt at all times. Children should be in the rear seats and in an appropriate restraint.
- The seat belt should be properly adjusted to a snug fit. Failure to do so may reduce the effectiveness of the entire restraint system and increase the chance or severity of injury in an accident. Serious injury or death can occur if the seat belt is not worn properly.
- Always route the shoulder belt over your shoulder and across your chest. Never put the belt behind your back, under your arm or across your neck. The belt should be away from your face and neck, but not falling off your shoulder.
- Position the lap belt as low and snug as possible AROUND THE HIPS, NOT THE WAIST. A lap belt worn too high could increase the risk of internal injuries in an accident.
- Be sure the seat belt tongue is securely fastened to the proper buckle.
- Do not wear the seat belt inside out or twisted. Doing so may reduce its effectiveness.
- Do not allow more than one person to use the same seat belt.
- Never carry more people in the vehicle than there are seat belts.
- If the seat belt warning light glows continuously while the power switch is turned ON with all doors closed and all seat belts fastened, it may indicate a malfunction in the system. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- All seat belt assemblies, including retractors and attaching hardware, should be inspected after any collision. It is recommended that you visit a NISSAN certified LEAF dealer for this service. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Seat belt assemblies not in use during a collision should also be inspected and replaced if either damage or improper operation is noted.
- All child restraints and attaching hardware should be inspected after any collision. Always follow the restraint manufacturer’s inspection instructions and replacement recommendations. The child restraints should be replaced if they are damaged.

1-10 Safety—Seats, seat belts and supplemental restraint system
SEAT BELT WARNING LIGHT
Both the driver’s and passenger’s front seats are equipped with a seat belt warning light. The warning light, located on the instrument panel, will show the status of the driver and passenger seat belt.

NOTE:
The front passenger seat belt warning light will not light up if the seat is not occupied.

For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.

PREGNANT WOMEN
NISSAN recommends that pregnant women use seat belts. The seat belt should be worn snug, and always position the lap belt as low as possible around the hips, not the waist. Place the shoulder belt over your shoulder and across your chest. Never put the lap/shoulder belt over your abdominal area. Contact your doctor for specific recommendations.

INJURED PERSONS
NISSAN recommends that injured persons use seat belts, depending on the injury. Check with your doctor for specific recommendations.

THREE-POINT TYPE SEAT BELT WITH RETRACTOR

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Every person who drives or rides in this vehicle should use a seat belt at all times.</td>
</tr>
</tbody>
</table>

• Do not ride in a moving vehicle when the seatback is reclined. This can be dangerous. The shoulder belt will not be against your body. In an accident, you could be thrown into it and receive neck or other serious injuries. You could also slide under the lap belt and receive serious internal injuries.
• For the most effective protection when the vehicle is in motion, the seat should be upright. Always sit well back and upright in the seat with both feet on the floor and adjust the seat belt properly.
• Do not allow children to play with the seat belts. Most seating positions are equipped with Automatic Locking Retractor (ALR) mode seat belts. If the seat belt becomes wrapped around a child’s neck with the ALR mode activated, the child can be seriously injured or killed if the seat belt retracts and becomes tight. This can occur even if the vehicle is parked. Unbuckle the seat belt to release the child. If the seat belt cannot be unbucketed or is already unbuckled, release the child by cutting the seat belt with a suitable tool (such as a knife or scissors) to release the seat belt.
Fastening the seat belts

1. Adjust the seat. For additional information, refer to “Seats” in this section.
2. Slowly pull the seat belt out of the retractor and insert the tongue into the buckle until you hear and feel the latch engage.
   • The retractor is designed to lock during a sudden stop or on impact. A slow pulling motion permits the belt to move and allows you some freedom of movement in the seat.
3. Position the lap belt portion low and snug on the hips as shown.
4. Pull the shoulder belt portion toward the retractor to take up extra slack. Be sure the shoulder belt is routed over your shoulder and across your chest.

The front passenger seat and the rear seating positions three-point seat belts have two modes of operation:
• Emergency Locking Retractor (ELR)
• Automatic Locking Retractor (ALR)

The ELR mode allows the seat belt to extend and retract to allow the driver and passengers some freedom of movement in the seat. The ELR locks the seat belt when the vehicle slows down rapidly or during certain impacts.

The ALR mode (child restraint mode) locks the seat belt for child restraint installation.

When ALR mode is activated the seat belt cannot be extended again until the seat belt tongue is detached from the buckle and fully retracted. The seat belt returns to the ELR mode after the seat belt fully retracts. For additional information, refer to “Child restraints” in this section.
The ALR mode should be used only for child restraint installation. During normal seat belt use by an occupant, the ALR mode should not be activated. If it is activated, it may cause uncomfortable seat belt tension. It can also change the operation of the front passenger air bag. For additional information, refer to “Front passenger air bag and status light” in this section.

**WARNING**

When fastening the seat belts, be certain that seatbacks are completely secured in the latched position. If they are not completely secured, passengers may be injured in an accident or sudden stop.

Unfastening the seat belts

To unfasten the seat belt, push the button on the buckle. The seat belt automatically retracts.

Checking seat belt operation

Seat belt retractors are designed to lock seat belt movement by two separate methods:

- When the belt is pulled quickly from the retractor
- When the vehicle slows down rapidly

To increase your confidence in the seat belts, check the operation as follows:

- Grasp the shoulder belt and pull forward quickly. The retractor should lock and restrict further belt movement.

If the retractor does not lock during this check, get the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service, or to learn more about seat belt operation.
Center of rear seat

Selecting correct set of seat belts:
The center seat belt buckle is identified by the CENTER mark A. The center seat belt tongue can be fastened only into the center seat belt buckle.

Shoulder belt height adjustment (front seats)
The shoulder belt anchor height should be adjusted to the position that is best for you. For additional information, refer to “Precautions on seat belt usage” in this section.

To adjust, pull the adjustment button ①, and then move the shoulder belt anchor to the preferred position ② so that the belt passes over the center of the shoulder. The belt should be away from your face and neck, but not falling off of your shoulder. Release the adjustment button to lock the shoulder belt anchor into position.

WARNING
• After adjustment, release the adjustment button and then try to move the shoulder belt anchor up and down to make sure that it is securely fixed in position.
• The shoulder belt anchor height should be adjusted to the position that is best for you. Failure to do so may reduce the effectiveness of the entire restraint system and increase the chance or severity of injury in an accident.
Seat belt hook
When the rear seat belts are not in use and when folding down the rear seats, hook the rear outer seat belts on the seat belt hooks.

SEAT BELT EXTENDERS
If, because of body size or driving position, it is not possible to properly fit the lap/shoulder belt and fasten it, an extender that is compatible with the installed seat belts is available for purchase. The extender adds approximately 8 in (200 mm) of length and may be used for either the driver or front passenger seating position. It is recommended that you visit a NISSAN certified LEAF dealer for assistance with purchasing an extender if an extender is required.

WARNING
• Only NISSAN seat belt extenders, made by the same company which made the original equipment seat belts, should be used with NISSAN seat belts.
• Adults and children who can use the standard seat belt should not use an extender. Such unnecessary use could result in serious personal injury in the event of an accident.
• Never use seat belt extenders to install child restraints. If the child restraint is not secured properly, the child could be seriously injured or killed in a collision or a sudden stop.

SEAT BELT MAINTENANCE
• To clean the seat belt webbing, apply a mild soap solution or any solution recommended for cleaning upholstery or carpets. Then wipe with a cloth and allow the seat belts to dry in the shade. Do not allow the seat belts to retract until they are completely dry.
• If dirt builds up in the shoulder belt guide of the seat belt anchors, the seat belts may retract slowly. Wipe the shoulder belt guide with a clean, dry cloth.
• Periodically check to see that the seat belt and the metal components, such as buckles, tongues, retractors, flexible wires and anchors, work properly. If loose parts, deterioration, cuts or other damage on the webbing is found, the entire seat belt assembly should be replaced.

Safety–Seats, seat belts and supplemental restraint system 1-15
**WARNING**

Do not allow children to play with the seat belts. Most seating positions are equipped with Automatic Locking Retractor (ALR) mode seat belts. If the seat belt becomes wrapped around a child’s neck with the ALR mode activated, the child can be seriously injured or killed if the seat belt retracts and becomes tight. This can occur even if the vehicle is parked. Unbuckle the seat belt to release the child. If the seat belt cannot be unbuckled or is already unbuckled, release the child by cutting the seat belt with a suitable tool (such as a knife or scissors) to release the seat belt.

Children need adults to help protect them. They need to be properly restrained.

In addition to the general information in this manual, child safety information is available from many other sources, including doctors, teachers, government traffic safety offices, and community organizations. Every child is different, so be sure to learn the best way to transport your child.

There are three basic types of child restraint systems:
- Rear-facing child restraint
- Forward-facing child restraint
- Booster seat

The proper restraint depends on the child’s size. Generally, infants up to about 1 year and less than 20 lb (9 kg) should be placed in rear-facing child restraints. Forward-facing child restraints are available for children who outgrow rear-facing child restraints and are at least 1 year old. Booster seats are used to help position a vehicle lap/shoulder belt on a child who can no longer use a forward-facing child restraint.

**WARNING**

Infants and children need special protection. The vehicle’s seat belts may not fit them properly. The shoulder belt may come too close to the face or neck. The lap belt may not fit over their small hip bones. In an accident, an improperly fitting seat belt could cause serious or fatal injury. Always use appropriate child restraints.

All U.S. states and Canadian provinces or territories require the use of approved child restraints for infants and small children. For additional information, refer to “Child restraints” in this section.

A child restraint may be secured in the vehicle by using either the LATCH (Lower Anchor and Tethers for CHildren) system or with the vehicle seat belt. For additional information, refer to “Child restraints” in this section.

NISSAN recommends that all pre-teens and children be restrained in the rear seat. According to accident statistics, children are safer when properly restrained in the rear seat than in the front seat.

This is especially important because your vehicle has a supplemental restraint system (air bag system) for the front passenger. For additional information, refer to “Supplemental Restraint System (SRS)” in this section.
INFANTS
Infants up to at least 1 year old should be placed in a rear-facing child restraint. NISSAN recommends that infants be placed in child restraints that comply with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards. You should choose a child restraint that fits your vehicle and always follow the manufacturer’s instructions for installation and use.

SMALL CHILDREN
Children that are over 1 year old and weigh at least 20 lbs (9 kg) should remain in a rear-facing child restraint as long as possible up to the height or weight limit of the child restraint. Children who outgrow the height or weight limit of the rear-facing child restraint and are at least 1 year old should be secured in a forward-facing child restraint with a harness. Refer to the manufacturer’s instructions for minimum and maximum weight and height recommendations. NISSAN recommends that small children be placed in child restraints that comply with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards. You should choose a child restraint that fits your vehicle and always follow the manufacturer’s instructions for installation and use.

LARGER CHILDREN
Children should remain in a forward-facing child restraint with a harness until they reach the maximum height or weight limit allowed by the child restraint manufacturer.

Once a child outgrows the height or weight limit of the harness-equipped forward-facing child restraint, NISSAN recommends that the child be placed in a commercially available booster seat to obtain proper seat belt fit. For a seat belt to fit properly, the booster seat should raise the child so that the shoulder belt is properly positioned across the chest and the top, middle portion of the shoulder. The shoulder belt should not cross the neck or face and should not fall off the shoulder. The lap belt should lie snugly across the lower hips or upper thighs, not the abdomen. A booster seat can only be used in seating positions that have a three-point type seat belt. The booster seat should fit the vehicle seat and have a label certifying that it complies with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards.

A booster seat should be used until the child can pass the seat belt fit test below:
• Are the child’s back and hips against the vehicle seatback?
• Is the child able to sit without slouching?
• Do the child’s knees bend easily over the front edge of the seat with feet flat on the floor?
• Can the child safely wear the seat belt (lap belt low and snug across the hips and shoulder belt across mid-chest and shoulder)?
• Is the child able to use the properly adjusted head restraint/headrest?
• Will the child be able to stay in position for the entire ride?
If you answered no to any of these questions, the child should remain in a booster seat using a three-point type seat belt.

**NOTE:**
Laws in some communities may follow different guidelines. Check local and state regulations to confirm your child is using the correct restraint system before traveling.

---

**WARNING**

Never let a child stand or kneel on any seat and do not allow a child in the cargo areas. The child could be seriously injured or killed in an accident or sudden stop.

---

1-18  Safety—Seats, seat belts and supplemental restraint system
PRECAUTIONS ON CHILD RESTRAINTS

WARNING

• Failure to follow the warnings and instructions for proper use and installation of child restraints could result in serious injury or death of a child or other passengers in a sudden stop or collision:
  – The child restraint must be used and installed properly. Always follow all of the child restraint manufacturer’s instructions for installation and use.
  – Infants and children should never be held on anyone’s lap. Even the strongest adult cannot resist the forces of a collision.
  – Do not put a seat belt around both a child and another passenger.

• NISSAN recommends that all child restraints be installed in the rear seat. Studies show that children are safer when properly restrained in the rear seat than in the front seat. If you must install a forward-facing child restraint in the front seat, refer to “Forward-facing child restraint installation using the seat belts” in this section.
  – Even with the NISSAN Advanced Air Bag System, never install a rear-facing child restraint in the front seat. An inflating air bag could seriously injure or kill a child. A rear-facing child restraint must only be used in the rear seat.
  – Be sure to purchase a child restraint that will fit the child and vehicle. Some child restraints may not fit properly in your vehicle.

• When the child restraint is not in use, keep it secured with the LATCH system or a seat belt. In a sudden stop or collision, loose objects can injure occupants or damage the vehicle.

  – Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorages, and a child could be seriously injured or killed in a collision.
  – Never use the anchor points for adult seat belts or harnesses.
  – A child restraint with a top tether strap should not be used in the front passenger seat.
  – Keep seatbacks as upright as possible after fitting the child restraint.
  – Infants and children should always be placed in an appropriate child restraint while in the vehicle.

Safety–Seats, seat belts and supplemental restraint system 1-19
A child restraint in a closed vehicle can become very hot. Check the seating surface and buckles before placing a child in the child restraint.

This vehicle is equipped with a universal child restraint anchor system, referred to as the LATCH (Lower Anchors and Tethers for Children) system. Some child restraints include rigid or webbing-mounted attachments that can be connected to these anchors.

For additional information, refer to “LATCH (Lower Anchors and Tethers for Children) system” in this section.

If you do not have a LATCH compatible child restraint, the vehicle seat belts can be used.

Several manufacturers offer child restraints for infants and small children of various sizes. When selecting any child restraint, keep the following points in mind:

- Choose only a restraint with a label certifying that it complies with Federal Motor Vehicle Safety Standard 213 or Canadian Motor Vehicle Safety Standard 213.
- Check the child restraint in your vehicle to be sure it is compatible with the vehicle's seat and seat belt system.
- If the child restraint is compatible with your vehicle, place your child in the child restraint and check the various adjustments to be sure the child restraint is compatible with your child. Choose a child restraint that is designed for your child's height and weight. Always follow all recommended procedures.
- If the combined weight of the child and child restraint is less than 65 lbs (29.5 kg), you may use either the LATCH anchors or the seat belt to install the child restraint (not both at the same time).
- If the combined weight of the child and child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint.
- Be sure to follow the child restraint manufacturer’s instructions for installation.

All U.S. states and Canadian provinces or territories require that infants and small children be restrained in an approved child restraint at all times while the vehicle is being operated. Canadian law requires the top tether strap on forward-facing child restraints be secured to the designated anchor point on the vehicle.
LATCH (LOWER ANCHORS AND TETHERS FOR CHILDREN) SYSTEM

Your vehicle is equipped with special anchor points that are used with LATCH system compatible child restraints. This system may also be referred to as the ISOFIX or ISOFIX compatible system. With this system, you do not have to use a vehicle seat belt to secure the child restraint unless the combined weight of the child and child restraint exceeds 65 lbs (29.5 kg). If the combined weight of the child and child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

The LATCH lower anchor points are provided to install child restraints in the rear outboard seating positions only. Do not attempt to install a child restraint in the center position using the LATCH lower anchors.

LATCH lower anchor

WARNING

Failure to follow the warnings and instructions for proper use and installation of child restraints could result in serious injury or death of a child or other passengers in a sudden stop or collision:
• Attach LATCH system compatible child restraints only at the locations shown in the illustration.
• Do not secure a child restraint in the center rear seating position using the LATCH lower anchors. The child restraint will not be secured properly.

• Inspect the lower anchors by inserting your fingers into the lower anchor area. Feel to make sure there are no obstructions over the anchors such as seat belt webbing or seat cushion material. The child restraint will not be secured properly if the lower anchors are obstructed.
• Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.
The LATCH lower anchors are located at the rear of the seat cushion near the seatback. A label is attached to the seatback to help you locate the LATCH lower anchors.

Installing child restraint LATCH lower anchor attachments
LATCH compatible child restraints include two rigid or webbing-mounted attachments that can be connected to two anchors located at certain seating positions in your vehicle. With this system, you do not have to use a vehicle seat belt to secure the child restraint. Check your child restraint for a label stating that it is compatible with the LATCH system. This information may also be in the instructions provided by the child restraint manufacturer.

When installing a child restraint, carefully read and follow the instructions in this manual and those supplied with the child restraint.

1-22 Safety–Seats, seat belts and supplemental restraint system
Top tether anchor

**WARNING**

- If the tonneau cover (if so equipped) contacts the top tether strap when it is attached to the top tether anchor, remove the tonneau cover (if so equipped) from the vehicle or secure it on the cargo floor below its attachment location. If the tonneau cover (if so equipped) is not removed, it may damage the top tether strap during a collision. Your child could be seriously injured or killed in a collision if the child restraint top tether strap is damaged.

- Do not allow cargo to contact the top tether strap when it is attached to the top tether anchor. Properly secure the cargo so it does not contact the top tether strap. Cargo that is not properly secured or that contacts the top tether strap may damage the top tether strap during a collision. Your child could be seriously injured or killed in a collision if the child restraint top tether strap is damaged.

- Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.

**Top tether anchor point locations:**

Anchor points are located on the back side of the seatbacks.

The child restraint top tether strap must be used when installing child restraints with the LATCH lower anchor attachments or seat belts. For additional information, refer to “Installing top tether strap” in this section.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN certified LEAF dealer for details.
REAR-FACING CHILD RESTRAINT INSTALLATION USING LATCH

For additional information, refer to all Warnings and Cautions in “Child safety” and “Child restraints” in this section before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a rear-facing child restraint using the LATCH system:

1. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

2. Secure the child restraint anchor attachments to the LATCH lower anchors. Check to make sure that the LATCH attachment is properly attached to the lower anchors.

Rear-facing webbing-mounted — step 2
Rear-facing rigid-mounted — step 2

1-24 Safety–Seats, seat belts and supplemental restraint system
3. For child restraints that are equipped with webbing-mounted attachments, remove any additional slack from the anchor attachments. Press downward and rearward firmly in the center of the child restraint with your hand to compress the vehicle seat cushion and seat-back while tightening the webbing of the anchor attachments.

4. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the seat near the LATCH attachment path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the LATCH attachment holds the restraint in place. If the restraint is not secure, tighten the LATCH attachment as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint or try installing by using the vehicle seat belt (if applicable). Not all child restraints fit in all types of vehicles.

5. Check to make sure that the child restraint is properly secured prior to each use. If the child restraint is loose, repeat steps 2 through 4.

**REAR-FACING CHILD RESTRAINT INSTALLATION USING THE SEAT BELTS**

**WARNING**

The three-point seat belt with Automatic Locking Retractor (ALR) must be used when installing a child restraint. Failure to use the ALR mode will result in the child restraint not being properly secured. The restraint could tip over or be loose and cause injury to a child in a sudden stop or collision. Also, it can change the operation of the front passenger air bag. For additional information, refer to “Front passenger air bag and status light” in this section.
For additional information, refer to all Warnings and Cautions in the “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and child restraint exceeds 65 lbs (29.5 kg). If the combined weight of the child and child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a rear-facing child restraint using the vehicle seat belt in the rear seats:

1. **Child restraints for infants must be used in the rear-facing direction and therefore must not be used in the front seat.** Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

Rear-facing — step 1
Follow these steps to install a rear-facing child restraint using the vehicle seat belt in the rear seats:

1. Route the seat belt tongue through the child restraint and insert it into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer’s instructions for belt routing.

Rear-facing — step 2

2. Route the seat belt tongue through the child restraint and insert it into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer’s instructions for belt routing.
3. Pull the shoulder belt until the belt is fully extended. At this time, the seat belt retractor is in the ALR mode (child restraint mode). It reverts to the ELR mode when the seat belt is fully retracted.

4. Allow the seat belt to retract. Pull up on the shoulder belt to remove any slack in the belt.

5. Remove any additional slack from the child restraint. Press downward and rearward firmly in the center of the child restraint with your hand to compress the vehicle seat cushion and seatback while pulling up on the seat belt.
6. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the seat belt path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the belt holds the restraint in place. If the restraint is not secure, tighten the seat belt as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.

7. Check to make sure that the child restraint is properly secured prior to each use. If the seat belt is not locked, repeat steps 1 through 6. After the child restraint is removed and the seat belt fully retracted, the ALR mode (child restraint mode) is canceled.

FORWARD-FACING CHILD RESTRAINT INSTALLATION USING LATCH

For additional information, refer to all Warnings and Cautions in “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a forward-facing child restraint using the LATCH system:

1. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

2. Secure the child restraint anchor attachments to the LATCH lower anchors. Check to make sure that the LATCH attachment is properly attached to the lower anchors.

If the child restraint is equipped with a top tether strap, route the top tether strap and secure the tether strap to the tether anchor point. For additional information, refer to “Installing top tether strap” in this section.

Do not install child restraints that require the use of a top tether strap in seating positions that do not have a top tether anchor.
3. The back of the child restraint should be secured against the vehicle seatback.

If necessary, remove the head restraint/headrest to obtain the correct child restraint fit. If the head restraint/headrest is removed, store it in a secure place. **Be sure to reinstall the head restraint/headrest when the child restraint is removed.** For additional information about head restraint/headrest adjustment, refer to “Head restraints/headrests” in this section.

If the seating position does not have an adjustable head restraint/headrest and it is interfering with the proper child restraint fit, try another seating position or a different child restraint.

4. For child restraints that are equipped with webbing-mounted attachments, remove any additional slack from the anchor attachments. Press downward and rearward firmly in the center of the child restraint with your knee to compress the vehicle seat cushion and seatback while tightening the webbing of the anchor attachments.

5. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.
6. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the LATCH attachment path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the LATCH attachment holds the restraint in place. If the restraint is not secure, tighten the LATCH attachment as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.

7. Check to make sure the child restraint is properly secured prior to each use. If the child restraint is loose, repeat steps 1 through 6.

**Forward-facing — step 6**

6. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the LATCH attachment path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the LATCH attachment holds the restraint in place. If the restraint is not secure, tighten the LATCH attachment as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.

**Installing top tether strap**

1. Top tether strap
2. Tether anchor point

The child restraint top tether strap must be used when installing the child restraint with the LATCH lower anchor attachments.

First, secure the child restraint with the LATCH lower anchors (rear bench outboard seating positions only).
Rear bench seat

OUTBOARD SEATING POSITIONS

1. Remove the head restraint/headrest and store it in a secure place. Be sure to reinstall the head restraint/headrest when the child restraint is removed. For additional information about head restraint/headrest adjustment, removal and installation, refer to “Head restraints/headrests” in this section.

2. Position the top tether strap over the seatback.

3. Secure the tether strap to the tether anchor point on the bottom of the seatback behind the child restraint.

4. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN certified LEAF dealer for details.

CENTER SEATING POSITION

1. Position the top tether strap over the seatback.

2. Secure the tether strap to the tether anchor point on the bottom of the seatback behind the child restraint.

3. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

FORWARD-FACING CHILD RERAINT INSTALLATION USING THE SEAT BELTS

FORWARD-FACING CHILD RERAINT INSTALLATION USING THE SEAT BELTS

1. Position the top tether strap over the seatback.

2. Secure the tether strap to the tether anchor point on the bottom of the seatback behind the child restraint.

3. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN certified LEAF dealer for details.

WARNING

Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.

WARNING

The three-point seat belt with Automatic Locking Retractor (ALR) must be used when installing a child restraint. Failure to use the ALR mode will result in the child restraint not being properly secured. The restraint could tip over or be loose and cause injury to a child in a sudden stop or collision. Also, it can change the operation of the front passenger air bag. For additional information, refer to “Front passenger air bag and status light” in this section.

Safety–Seats, seat belts and supplemental restraint system 1-31
For additional information, refer to all Warnings and Cautions in “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a forward-facing child restraint using the vehicle seat belt in the rear seat or in the front passenger seat:

1. If you must install a child restraint in the front seat, it should be placed in the forward-facing direction only. Move the seat to the rearmost position. Child restraints for infants must be used in the rear-facing direction and therefore must not be used in the front seat.

2. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

3. Route the seat belt tongue through the child restraint and insert it into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer’s instructions for belt routing.

Forward-facing (front passenger seat) — step 1

For additional information, refer to all Warnings and Cautions in “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a forward-facing child restraint using the vehicle seat belt in the rear seat or in the front passenger seat:

1. If you must install a child restraint in the front seat, it should be placed in the forward-facing direction only. Move the seat to the rearmost position. Child restraints for infants must be used in the rear-facing direction and therefore must not be used in the front seat.

2. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

The back of the child restraint should be secured against the seatback. If necessary, adjust the head restraint/headrest to obtain the correct child restraint fit. If the head restraint/headrest is removed, store it in a secure place. Be sure to reinstall the head restraint/headrest when the child restraint is removed. For additional information about head restraint/headrest adjustment, removal and installation, refer to “Head restraints/headrests” in this section.

If the seating position does not have a adjustable head restraint/headrest and it is interfering with the proper child restraint fit, try another seating position or a different child restraint.

3. Route the seat belt tongue through the child restraint and insert it into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer’s instructions for belt routing.

If the child restraint is equipped with a top tether strap, route the top tether strap and secure the tether strap to the tether anchor point (rear seat installation only). For additional information, refer to “Installing top tether strap” in this section.

Do not install child restraints that require the use of a top tether strap in seating positions that do not have a top tether anchor.
4. Pull the shoulder belt until the belt is fully extended. At this time, the seat belt retractor is in the ALR mode (child restraint mode). It reverts to the ELR mode when the seat belt is fully retracted.

5. Allow the seat belt to retract. Pull up on the shoulder belt to remove any slack in the belt.

6. Remove any additional slack from the seat belt. Press downward and rearward firmly in the center of the child restraint with your knee to compress the vehicle seat cushion and seatback while pulling up on the seat belt. 

7. Tighten the tether strap according to the manufacturer's instructions to remove any slack.
8. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the seat belt path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the belt holds the restraint in place. If the restraint is not secure, tighten the seat belt as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.

9. Check to make sure the child restraint is properly secured prior to each use. If the seat belt is not locked, repeat steps 2 through 8.

10. If the child restraint is installed on the front passenger seat, push the power switch to the ON position. The front passenger air bag status light should illuminate. If this light does not illuminate, refer to “Front passenger air bag and status light” in this section. Move the child restraint to another seating position. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

After the child restraint is removed and the seat belt is fully retracted, the ALR mode (child restraint mode) is canceled.
Installing top tether strap

1. Top tether strap
2. Tether anchor point

The child restraint top tether strap must be used when installing the child restraint with the seat belts.

First, secure the child restraint with the seat belt.

Rear bench seat

OUTBOARD SEATING POSITIONS

1. Remove the head restraint/headrest and store it in a secure place. Be sure to reinstall the head restraint/headrest when the child restraint is removed. For additional information about head restraint/headrest adjustment, removal and installation, refer to “Head restraints/headrests” in this section.

2. Position the top tether strap 1 over the seatback.

3. Secure the tether strap to the tether anchor point 2 on the bottom of the seatback behind the child restraint.

4. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

CENTER SEATING POSITION

1. Position the top tether strap 1 over the seatback.

2. Secure the tether strap to the tether anchor point 2 on the bottom of the seatback behind the child restraint.

3. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

WARNING

Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.

BOOSTER SEATS

For additional information on installing a booster seat in your vehicle, follow the instructions outlined in this section.
Precautions on booster seats

**WARNING**

If a booster seat and seat belt are not used properly, the risk of a child being injured or killed in a sudden stop or collision greatly increases:

- Make sure the shoulder portion of the belt is away from the child’s face and neck and the lap portion of the belt does not cross the stomach.
- Make sure the shoulder belt is not behind the child or under the child’s arm.
- A booster seat must only be installed in a seating position that has a lap/shoulder belt.

Booster seats of various sizes are offered by several manufacturers. When selecting any booster seat, keep the following points in mind:

- Choose only a booster seat with a label certifying that it complies with Federal Motor Vehicle Safety Standard 213 or Canadian Motor Vehicle Safety Standard 213.
- Check the booster seat in your vehicle to be sure it is compatible with the vehicle’s seat and seat belt system.
- Make sure the child’s head will be properly supported by the booster seat or vehicle seat. The seatback must be at or above the center of the child’s ears. For example, if a low back booster seat is chosen, the vehicle seatback must be at or above the center of the child’s ears. If the seatback is lower than the center of the child’s ears, a high back booster seat should be used.
If the booster seat is compatible with your vehicle, place your child in the booster seat and check the various adjustments to be sure the booster seat is compatible with your child. Always follow all recommended procedures.

All U.S. states and Canadian provinces or territories require that infants and small children be restrained in an approved child restraint at all times while the vehicle is being operated.

The instructions in this section apply to booster seat installation in the rear seats or the front passenger seat.

Booster seat installation

**WARNING**

To avoid injury to child, do not use the lap/shoulder belt Automatic Locking Retractor (ALR) mode when using a booster seat with the seat belts.

For additional information, refer to all Warnings and Cautions in “Child safety”, “Child restraints” and “Booster seats” sections of this manual before installing a child restraint.

Follow these steps to install a booster seat on the rear seat or in the front passenger seat:

1. If you must install a booster seat in the front seat, move the seat to the rearmost position.
2. Position the booster seat on the seat. Only place it in the forward-facing direction. Always follow the booster seat manufacturer’s instructions.
3. The booster seat should be positioned on the vehicle seat so that it is stable.

Front passenger seat
If necessary, adjust or remove the head restraint/headrest to obtain the correct booster seat fit. If the head restraint/headrest is removed, store it in a secure place. **Be sure to reinstall the head restraint/headrest when the booster seat is removed.** For additional information about head restraint/headrest adjustment, removal and installation, refer to “Head restraints/headrests” in this section.

If the seating position does not have an adjustable head restraint/headrest and it is interfering with the proper booster seat fit, try another seating position or a different booster seat.

4. Position the lap portion of the seat belt low and snug on the child’s hips. Be sure to follow the booster seat manufacturer’s instructions for adjusting the seat belt routing.

5. Pull the shoulder belt portion of the seat belt toward the retractor to take up extra slack. Be sure the shoulder belt is positioned across the top, middle portion of the child’s shoulder. Be sure to follow the booster seat manufacturer’s instructions for adjusting the seat belt routing.

6. Follow the warnings, cautions and instructions for properly fastening a seat belt. For additional information, refer to “Three-point type seat belt with retractor” in this section.

7. If the booster seat is installed in the front passenger seat, push the power switch to the ON position. The front passenger air bag status light may or may not illuminate, depending on the size of the child and the type of booster seat used. For additional information, refer to “Front passenger air bag and status light” in this section.
SUPPLEMENTAL RESTRAINT SYSTEM (SRS)
PRECAUTIONS ON SRS
This SRS section contains important information concerning the following systems.

• Driver and front passenger supplemental front-impact air bag (NISSAN Advanced Air Bag System)
• Front seat-mounted side-impact supplemental air bag
• Roof-mounted curtain side-impact and rollover (if so equipped) supplemental air bag
• Seat belt with pretensioner(s) (front seats)

Supplemental front-impact air bag system
The NISSAN Advanced Air Bag System can help cushion the impact force to the head of occupants in front and rear outboard seating positions in certain side impact collisions. In a side impact, the curtain air bags are designed to inflate on the side where the vehicle is impacted. If so equipped, in a rollover, the curtain air bags are designed to inflate and remain inflated for a short time.

The SRS is designed to supplement the crash protection provided by the driver and passenger seat belts and is not a substitute for them. Seat belts should always be correctly worn, and the occupant should be seated a suitable distance away from the steering wheel, instrument panel and door finishers. For additional information, instructions, and precautions on seat belt usage, refer to “Seat belts” in this section.

Roof-mounted curtain side-impact and rollover (if so equipped) supplemental air bag system
This system can help cushion the impact force to the chest and pelvic area of the driver and front passenger in certain frontal collisions. The side air bags are designed to inflate on the side where the vehicle is impacted.

The supplemental air bags operate only when the power switch is in the ON position.

After the power switch is placed in the ON position, the supplemental air bag warning light illuminates. The supplemental air bag warning light will turn off after about 7 seconds if the system is operational.
**WARNING**

- The front air bags ordinarily will not inflate in the event of a side impact, rear impact, rollover or lower severity frontal collision. Always wear your seat belts to help reduce the risk or severity of injury in various kinds of accidents.
- The front passenger air bag will not inflate if the passenger air bag status light is lit. For additional information, refer to “Front passenger air bag and status light” in this section.
- The seat belts and the front air bags are most effective when you are sitting well back and upright in the seat with both feet on the floor. The front air bags inflate with great force. Even with the NISSAN Advanced Air Bag System, if you are unrestrained, leaning forward, sitting sideways or out of position in any way, you are at greater risk of injury or death in a crash. You may also receive serious or fatal injuries from the front air bag if you are up against it when it inflates. Always sit back against the seatback and as far away as practical from the steering wheel or instrument panel. Always properly use the seat belts.
• The driver and front passenger seat belt buckles are equipped with sensors that detect if the seat belts are fastened. The NISSAN Advanced Air Bag System monitors the severity of a collision and seat belt usage then inflates the air bags as needed. Failure to properly wear seat belts can increase the risk or severity of injury in an accident.

• The front passenger seat is equipped with occupant classification sensor (weight sensor) that turns the front passenger air bag OFF under some conditions. This sensor is only used in this seat. Failure to be properly seated and wearing the seat belt can increase the risk or severity of injury in an accident. For additional information, refer to “Front passenger air bag and status light” in this section.

• Keep hands on the outside of the steering wheel. Placing them inside the steering wheel rim could increase the risk that they are injured if the front air bag inflates.
**WARNING**

- Never let children ride unrestrained or extend their hands or face out of the window. Do not attempt to hold them in your lap or arms. Some examples of dangerous riding positions are shown in the illustrations.
- Children may be severely injured or killed when the front air bags, side air bags or curtain air bags inflate if they are not properly restrained. Pre-teens and children should be properly restrained in the rear seat, if possible.
- Even with the NISSAN Advanced Air Bag System, never install a rear-facing child restraint on the front seat. An inflating front air bag could seriously injure or kill your child. For additional information, refer to “Child restraints” in this section.

Do not lean against doors or windows.
WARNING
Front seat-mounted side-impact supplemental air bags and roof-mounted curtain side-impact and rollover (if so equipped) supplemental air bags:
• The side air bags and curtain air bags ordinarily will not inflate in the event of a frontal impact, rear impact, or lower severity side collision. Always wear your seat belts to help reduce the risk or severity of injury in various kinds of accidents.

• The seat belts, the side air bags and curtain air bags are most effective when you are sitting well back and upright in the seat. The side air bag and curtain air bag inflate with great force. Do not allow anyone to place their hand, leg or face near the side air bag on the side of the seatback of the front seat or near the side roof rails. Do not allow anyone sitting in the front seats or rear outboard seats to extend their hand out of the window or lean against the door. Some examples of dangerous riding positions are shown in the previous illustrations.
• When sitting in the rear seat, do not hold onto the seatback of the front seat. If the side air bag inflates, you may be seriously injured. Be especially careful with children, who should always be properly restrained. Some examples of dangerous riding positions are shown in the illustrations.
• Do not use seat covers on the front seatbacks. They may interfere with side air bag inflation.
1. Crash zone sensor
2. Supplemental front-impact air bag modules
3. Front seat-mounted side-impact supplemental air bag modules
4. Occupant classification sensor (weight sensor)
5. Occupant classification system control unit
6. Roof-mounted curtain side-impact and rollover (if so equipped) supplemental air bag inflators
7. Roof-mounted curtain side-impact and rollover (if so equipped) supplemental air bag modules
8. Satellite sensors
9. Seat belt with pretensioner(s) (front seats)
10. Air bag Control Unit (ACU)

NISSAN Advanced Air Bag System (front seats)

WARNING
To ensure proper operation of the front passenger’s NISSAN Advanced Air Bag System, please observe the following items.

- Do not allow a passenger in the rear seat to push or pull on the seatback pocket.
- Do not place heavy loads heavier than 2.2 lb (1 kg) on the seatback, head restraint/headrest or in the seatback pocket.
- Make sure that there is nothing pressing against the rear of the seatback, such as a child restraint installed in the rear seat or an object stored on the floor.
- Make sure that there is no object placed under the front passenger seat.
- Make sure that there is no object placed between the seat cushion and center console or between the seat cushion and the door.

1-44 Safety–Seats, seat belts and supplemental restraint system
• If a forward-facing child restraint is installed in the front passenger seat, do not position the front passenger seat so the child restraint contacts the instrument panel. If the child restraint does contact the instrument panel, the system may determine the seat is occupied and the passenger air bag may deploy in a collision. Also the front passenger air bag status light may not illuminate. For additional information about installing and using child restraints, refer to “Child restraints” in this section.

• Confirm the operating condition with the front passenger air bag status light.

• If you notice that the front passenger air bag status light is not operating as described in this section, get the occupant classification system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

• Until you have confirmed with a dealer that your passenger seat occupant classification system is working properly, position the occupants in the rear seating positions.

• Do not position the front passenger seat so it contacts the rear seat. If the front seat does contact the rear seat, the air bag system may determine a sensor malfunction has occurred and the front passenger air bag status light may illuminate and the supplemental air bag warning light may flash.

This vehicle is equipped with the NISSAN Advanced Air Bag System for the driver and front passenger seats. This system is designed to meet certification requirements under U.S. regulations. It is also permitted in Canada. All of the information, cautions and warnings in this manual apply and must be followed.

The driver supplemental front-impact air bag is located in the center of the steering wheel. The front passenger supplemental front-impact air bag is mounted in the instrument panel above the glove box. The front air bags are designed to inflate in higher severity frontal collisions, although they may inflate if the forces in another type of collision are similar to those of a higher severity frontal impact. They may not inflate in certain frontal collisions. Vehicle damage (or lack of it) is not always an indication of proper front air bag operation.

The NISSAN Advanced Air Bag System monitors information from the crash zone sensor and the Air bag Control Unit (ACU). Inflator operation is based on the severity of a collision and seat belt usage for the driver. For the front passenger, the occupant classification sensor is also monitored. Based on information from the sensor, only one front air bag may inflate in a crash, depending on the crash severity. Additionally, the front passenger air bag may be automatically turned OFF under some conditions, depending on the weight detected on the passenger seat and how the seat belt is used. If the front passenger air bag is OFF, the passenger air bag status light will be illuminated. For additional information, refer to “Front passenger air bag and status light” in this section. One front air bag inflating does not indicate improper performance of the system.

If you have any questions about your air bag system, it is recommended that you visit a NISSAN certified LEAF dealer to obtain information about the system. If you are considering modification of your vehicle due to a disability, you may also contact NISSAN. Contact information is contained in the front of this Owner’s Manual.

Safety–Seats, seat belts and supplemental restraint system
When a front air bag inflates, a fairly loud noise may be heard, followed by release of smoke. This smoke is not harmful and does not indicate a fire. Care should be taken not to inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

Front air bags, along with the use of seat belts, help to cushion the impact force on the head and chest of the front occupants. They can help save lives and reduce serious injuries. However, an inflating front air bag may cause facial abrasions or other injuries. Front air bags do not provide restraint to the lower body.

Even with NISSAN Advanced Air Bags, seat belts should be correctly worn and the driver and front passenger seated upright as far as practical away from the steering wheel or instrument panel. The front air bags inflate quickly in order to help protect the front occupants. Because of this, the force of the front air bag inflating can increase the risk of injury if the occupant is too close to, or is against, the air bag module during inflation.

The front air bags deflate quickly after a collision.

The front air bags operate only when the power switch is in the ON position.

After the power switch is placed in the ON position, the supplemental air bag warning light illuminates. The supplemental air bag warning light will turn off after about 7 seconds if the system is operational.

Front passenger air bag and status light:

**WARNING**

The front passenger air bag is designed to automatically turn OFF under some conditions. Read this section carefully to learn how it operates. Proper use of the seat, seat belt and child restraints is necessary for most effective protection. Failure to follow all instructions in this manual concerning the use of seats, seat belts and child restraints can increase the risk or severity of injury in an accident.
Status light:
The front passenger seat is equipped with an occupant classification sensor (weight sensor) that turns the front passenger air bag on or off depending on the weight applied to the front passenger seat. The status of the front passenger air bag (ON or OFF) is indicated by the front passenger air bag status light \( \mathcal{P} \) which is located on the instrument panel.

After the power switch is placed in the “ON” position, the front passenger air bag status light on the instrument panel illuminates for about 7 seconds and then turns off or remains illuminated depending on the front passenger seat occupied status. The light operates as follows:

<table>
<thead>
<tr>
<th>CONDITION</th>
<th>DESCRIPTION</th>
<th>PASSENGER AIR BAG INDICATOR LIGHT (( \mathcal{P} )) RESULT</th>
<th>FRONT PASSENGER AIR BAG STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Empty front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Nobody/Somebody</td>
<td>Bag or Child or Child Restraint or Small Adult in front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Adult</td>
<td>Adult in the front passenger seat</td>
<td>OFF (dark)</td>
<td>ACTIVATED</td>
</tr>
</tbody>
</table>

In addition to the above, certain objects placed on the front passenger seat may also cause the light to operate as described above depending on their weight.

For additional information related to the normal operation and troubleshooting of this occupant classification sensor system, please refer to “Normal operation” and “Troubleshooting” in this section.

Front passenger air bag:
The front passenger air bag is designed to automatically turn OFF when the vehicle is operated under some conditions as described below in accordance with U.S. regulations. If the front passenger air bag is OFF, it will not inflate in a crash. The driver air bag and other air bags in your vehicle are not part of this system.

The purpose of the regulation is to help reduce the risk of injury or death from an inflating air bag to certain front passenger seat occupants, such as children, by requiring the air bag to be automatically turned OFF. Certain sensors are used to meet the requirements.

The occupant classification sensor in this vehicle is a weight sensor. It is designed to detect an occupant and objects on the seat by weight. For example, if a child is in the front passenger seat, the NISSAN Advanced Air Bag System is designed to turn the front passenger air bag OFF in
accordance with the regulations. Also, if a child restraint of the type specified in the regulations is on the seat, its weight and the child’s weight can be detected and cause the air bag to turn OFF.

Front passenger seat adult occupants who are properly seated and using the seat belt as outlined in this manual should not cause the front passenger air bag to be automatically turned OFF. For small adults it may be turned OFF, however if the occupant takes his/her weight off the seat cushion (for example, by not sitting upright, by sitting on an edge of the seat, or by otherwise being out of position), this could cause the sensors to turn the air bag OFF. Always be sure to be seated and wearing the seat belt properly for the most effective protection by the seat belt and supplemental air bag.

NISSAN recommends that pre-teens and children be properly restrained in a rear seat. NISSAN also recommends that appropriate child restraints and booster seats be properly installed in a rear seat. If this is not possible, the occupant classification sensor is designed to operate as described above to turn the front passenger air bag OFF for specified child restraints as required by regulations. Failing to properly secure child restraints and to use the ALR mode may allow the restraint to tip or move in a collision or sudden stop. This can also result in the front passenger air bag inflating in a crash instead of being OFF. For additional information about proper use and installation, refer to “Child restraints” in this section.

If the front passenger seat is not occupied, the front passenger air bag is designed not to inflate in a crash. However, heavy objects placed on the seat could result in air bag inflation, because of the object’s weight being detected by the occupant classification sensor. Other conditions could also result in air bag inflation, such as if a child is standing on the seat, or if two children are on the seat, contrary to the instructions in this manual. Always be sure that you and all vehicle occupants are seated and restrained properly.

Using the front passenger air bag status light, you can monitor when the front passenger air bag is automatically turned OFF.

If an adult occupant is in the seat but the front passenger air bag status light is illuminated (indicating that the air bag is OFF), it could be that the person is a small adult, or is not sitting on the seat properly or not using the seat belt properly.

If a child restraint must be used in the front seat, the front passenger air bag status light may or may not be illuminated, depending on the size of the child and the type of child restraint being used. If the front passenger air bag status light is not illuminated (indicating that the air bag might inflate in a crash), it could be that the child restraint or seat belt is not being used properly. Make sure that the child restraint is installed properly, the seat belt is used properly and the occupant is positioned properly. If the front passenger air bag status light is still not illuminated, reposition the occupant or child restraint in a rear seat.

If the front passenger air bag status light will not illuminate even though you believe that the child restraint, the seat belts and the occupant are properly positioned, it is recommended that you take your vehicle to a NISSAN certified LEAF dealer. A NISSAN certified LEAF dealer can check system status by using a special tool. However, until you have confirmed with a dealer that your air bag is working properly, reposition the occupant or child restraint in a rear seat.

The NISSAN Advanced Air Bag System and front passenger air bag status light will take a few seconds to register a change in the front passenger seat status. For example, if a large adult who
is sitting the front passenger seat exits the vehicle, the front passenger air bag status light will go from OFF to ON for a few seconds and then to OFF. This is normal system operation and does not indicate a malfunction.

If a malfunction occurs in the front passenger air bag system, the supplemental air bag warning light ⚠️, located in the meter and gauges area of the instrument panel, will be illuminated (blinking or steadily lit). Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

Normal operation:
In order for the occupant classification sensor system to classify the front passenger based on weight, please follow the precautions and steps outlined below:

Precautions:
• Make sure that there are no objects weighing over 2.2 lbs (1 kg) hanging on the seat or placed in the seatback pocket.
• Make sure that a child restraint or other object is not pressing against the rear of the seatback.
• Make sure that the rear passenger is not pushing or pulling on the back of the front passenger seat.

Steps:
1. Adjust the seat as outlined in the “Seats” section of this manual. Sit upright, leaning against the seatback, and centered on the seat cushion with your feet comfortably extended to the floor.
2. Make sure there are no objects on your lap.
3. Fasten the seat belt as outlined in the “Seat belts” section of this manual. Front passenger seat belt buckle status is monitored by the occupant classification system, and is used as an input to determine occupancy status. So, it is highly recommended that the front passenger fasten their seat belt.
4. Remain in this position for 30 seconds allowing the system to classify the front passenger before the vehicle is put into motion.
5. Ensure proper classification by checking the front passenger air bag status light.

NOTE:
This vehicle’s occupant classification sensor system generally keeps the classification locked during driving, so it is important that you confirm that the front passenger is properly classified prior to driving. However, the occupant classification sensor may recalculate the weight of the occupant under some conditions (both while driving and when stopped), so front passenger seat occupants should continue to remain seated as outlined above.

Troubleshooting:
If you think the front passenger air bag status light is incorrect:
1. If the light is ON with an adult occupying the front passenger seat:
   • Occupant is a small adult — the air bag light is functioning as intended. The front passenger air bag is suppressed.
   However, if the occupant is not a small adult, then this may be due to the following conditions that may be interfering with the weight sensors:
   • Occupant is not sitting upright, leaning against the seatback, and centered on the seat cushion with his/her feet comfortably extended to the floor.
• A child restraint or other object pressing against the rear of the seatback.
• A rear passenger pushing or pulling on the back of the front passenger seat.
• Forcing the front seat or seatback against an object on the seat or floor behind it.
• An object placed under the front passenger seat.
• An object placed between the seat cushion and center console or between the seat cushion and the door.

If the vehicle is moving, please come to a stop when it is safe to do so. Check and correct any of the above conditions. Restart the vehicle and wait 1 minute.

NOTE:
A system check will be performed during which the front passenger air bag status light will remain lit for about 7 seconds initially.

If the light is still ON after this, the person should be advised not to ride in the front passenger seat and the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

2. If the light is OFF with a small adult, child or child restraint occupying the front passenger seat.

This may be due to the following conditions that may be interfering with the weight sensors:
• Small adult or child is not sitting upright, leaning against the seatback, and centered on the seat cushion with his/her feet comfortably extended to the floor.
• The child restraint is not properly installed, as outlined in the “Child restraints” section of this manual.
• An object weighing over 2.2 lbs (1 kg) hanging on the seat or placed in the seatback pocket.
• A child restraint or other object pressing against the rear or the seatback.
• A rear passenger pushing or pulling on the back of the front passenger seat. Pushing or pulling on the seatback of the front passenger seat.
• Forcing the front seat or seatback against an object on the seat or floor behind it.
• An object placed under the front passenger seat.

If the vehicle is moving, please come to a stop when it is safe to do so. Check and correct any of the above conditions. Restart the vehicle and wait 1 minute.

NOTE:
A system check will be performed during which the front passenger air bag status light will remain lit for about 7 seconds initially.

If the light is still OFF after this, the small adult, child or child restraint should be repositioned in the rear seat and the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

3. If the light is OFF with no front passenger and no objects on the front passenger seat the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
Other supplemental front-impact air bag precautions:

**WARNING**

- Do not place any objects on the steering wheel pad or on the instrument panel. Also, do not place any objects between any occupant and the steering wheel or instrument panel. Such objects may become dangerous projectiles and cause injury if the front airbags inflate.
- Do not place objects with sharp edges on the seat. Also, do not place heavy objects on the seat that will leave permanent impressions in the seat. Such objects can damage the seat or occupant classification sensor (weight sensor). This can affect the operation of the airbag system and result in serious personal injury.
- Do not use water or acidic cleaners (hot steam cleaners) on the seat. This can damage the seat or occupant classification sensor. This can also affect the operation of the airbag system and result in serious personal injury.
- Immediately after inflation, several front airbag system components will be hot. Do not touch them; you may severely burn yourself.
- No unauthorized changes should be made to any components or wiring of the supplemental airbag system. This is to prevent accidental inflation of the supplemental airbag or damage to the supplemental airbag system.
- Do not make unauthorized changes to your vehicle’s electrical system, suspension system or front end structure. This could affect proper operation of the front airbag system.
- Tampering with the front airbag system may result in serious personal injury. Tampering includes changes to the steering wheel and the instrument panel assembly by placing material over the steering wheel pad and above the instrument panel or by installing additional trim material around the airbag system.
- Removing or modifying the front passenger seat may affect the function of the airbag system and result in serious personal injury.
- Modifying or tampering with the front passenger seat may result in serious personal injury. For example, do not change the front seats by placing material on the seat cushion or by installing additional trim material, such as seat covers, on the seat that is not specifically designed to assure proper airbag operation. Additionally, do not stow any objects under the front passenger seat or the seat cushion and seatback. Such objects may interfere with the proper operation of the occupant classification sensor (weight sensor).
- No unauthorized changes should be made to any components or wiring of the seat belt system. This may affect the front airbag system. Tampering with the seat belt system may result in serious personal injury.
It is recommended that you visit a NISSAN certified LEAF dealer for work on and around the front air bag system. It is also recommended that you visit a NISSAN certified LEAF dealer for installation of electrical equipment. The Supplemental Restraint System (SRS) wiring harnesses* should not be modified or disconnected. Unauthorized electrical test equipment and probing devices should not be used on the air bag system.

A cracked windshield should be replaced immediately by a qualified repair facility. A cracked windshield could affect the function of the Supplemental Restraint System.

*The SRS wiring harness connectors are yellow and orange for easy identification.

When selling your vehicle, we request that you inform the buyer about the front air bag system and guide the buyer to the appropriate sections in this Owner’s Manual.

Front seat-mounted side-impact supplemental air bag and roof-mounted curtain side-impact and rollover (if so equipped) supplemental air bag systems

The side air bags are located in the outside of the seatback of the front seats. The curtain air bags are located in the side roof rails. All of the information, cautions, and warnings in this manual apply and must be followed. The side air bags and curtain air bags are designed to inflate in higher severity side collisions, although they may inflate if the forces in another type of collision are similar to those of a higher severity side impact. They are designed to inflate on the side where the vehicle is impacted. They may not inflate in certain side collisions on the side where the vehicle is impacted.

If so equipped the curtain air bags are also designed to inflate in certain types of rollover collisions or near rollovers. As a result, certain vehicle movements (for example, during severe off-roading) may cause the curtain air bags to inflate. Vehicle damage (or lack of it) is not always an indication of proper side air bag and curtain air bag operation.

When the side air bags and curtain air bags inflate, a fairly loud noise may be heard, followed by release of smoke. This smoke is not harmful and does not indicate a fire. Care should be taken not to inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

Side air bags, along with the use of seat belts, help to cushion the impact force on the chest and pelvic area of the front occupants. Curtain air bags help to cushion the impact force to the head of occupants in the front and rear outboard seating positions. They can help save lives and reduce serious injuries. However, side air bags and curtain air bags may cause abrasions or other...
injuries. Side air bags and curtain air bags do not provide restraint to the lower body.

The seat belts should be correctly worn and the driver and passenger seated upright as far as practical away from the side air bags. Rear seat passengers should be seated as far away as practical from the door finishers and side roof rails. The side air bags and curtain air bags inflate quickly in order to help protect the occupants in the outboard seating positions. Because of this, the force of the side air bags and curtain air bags inflating can increase the risk of injury if the occupant is too close to, or is against, these air bag modules during inflation. The side air bags and curtain air bags will deflate quickly after the collision is over.

The side air bags and curtain air bags operate only when the power switch is in the ON position.

After turning the power switch to the ON position, the supplemental air bag warning light illuminates. The supplemental air bag warning light will turn off after about 7 seconds if the systems are operational.

**WARNING**

- Do not place any objects near the seat-back of the front seats. Also, do not place any objects (an umbrella, bag, etc.) between the front door finisher and the front seat. Such objects may become dangerous projectiles and cause injury if a side air bag inflates.
- Right after inflation, several side air bag and curtain air bag system components will be hot. Do not touch them; you may severely burn yourself.
- No unauthorized changes should be made to any components or wiring of the side air bag and curtain air bag systems. This is to prevent damage to or accidental inflation of the side air bag and curtain air bag systems.
- Do not make unauthorized changes to your vehicle's electrical system, suspension system or side panel. This could affect proper operation of the side air bag and curtain air bag systems.

- Tampering with the side air bag system may result in serious personal injury. For example, do not change the front seats by placing material near the seatbacks or by installing additional trim material, such as seat covers, around the side air bag.
- It is recommended that you visit a NISSAN certified LEAF dealer for work around and on the side air bag and curtain air bag systems. It is also recommended that you visit a NISSAN certified LEAF dealer for installation of electrical equipment. The Supplemental Restraint System (SRS) wiring harnesses* should not be modified or disconnected. Unauthorized electrical test equipment and probing devices should not be used on the side air bag and curtain supplemental air bag systems.

*The SRS wiring harness connectors are yellow and orange for easy identification.

When selling your vehicle, we request that you inform the buyer about the side air bag and curtain air bag systems and guide the buyer to the appropriate sections in this Owner’s Manual.
Seat belt with pretensioner(s) (front seats)

**WARNING**

- The pretensioner(s) cannot be reused after activation. They must be replaced together with the retractor and buckle as a unit.
- If the vehicle becomes involved in a collision but pretensioner(s) are not activated, be sure to have the pretensioner system checked and, if necessary, replaced. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- No unauthorized changes should be made to any components or wiring of the pretensioner system. This is to prevent damage to or accidental activation of the pretensioner(s). Tampering with the pretensioner system may result in serious personal injury.

The pretensioner system may activate with the supplemental air bag system in certain types of collisions. Working with the seat belt retractor, the pretensioner(s) help tighten the seat belt when the vehicle becomes involved in certain types of collisions, helping to restrain front seat occupants.

The pretensioner(s) are encased with the seat belt retractor and to the seat belt anchor affixed to the floor of the vehicle. These seat belts are used the same way as conventional seat belts.

It is recommended that you visit a NISSAN certified LEAF dealer for work around and on the pretensioner system. It is also recommended that you visit a NISSAN certified LEAF dealer for installation of electrical equipment. Unauthorized electrical test equipment and probing devices should not be used on the pretensioner system.

If you need to dispose of the pretensioner(s) or scrap the vehicle, it is recommended that you visit a NISSAN certified LEAF dealer for this service. Incorrect disposal procedures could cause personal injury.

When pretensioner(s) activate, smoke is released and a loud noise may be heard. This smoke is not harmful and does not indicate a fire. Care should be taken not to inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

After the pretensioner(s’) activation, load limiters allow the seat belt to release webbing (if necessary) to reduce forces against the chest.

The supplemental air bag warning light is used to indicate malfunctions in the pretensioner system. For additional information, refer to “Supplemental air bag warning light” in this section. If the operation of the supplemental air bag warning light indicates there is a malfunction, have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

When selling your vehicle, we request that you inform the buyer about the pretensioner system and guide the buyer to the appropriate sections in this Owner’s Manual.
SUPPLEMENTAL AIR BAG WARNING LABELS

A. Supplemental front-impact air bag system warning labels

The warning labels are located on the surface of the sun visors.

SUPPLEMENTAL AIR BAG WARNING LIGHT

The supplemental air bag warning light, displaying ⚠️ in the instrument panel, monitors the circuits of the Air bag Control Unit (ACU), satellite sensors, crash zone sensor, occupant classification sensor, the supplemental front-impact air bag, front seat-mounted side-impact supplemental air bag, roof-mounted curtain side-impact supplemental air bag and seat belt pretensioner systems. The monitored circuits include air bag systems, pretensioner(s) and all related wiring.

When the power switch is in the ON position, the supplemental air bag warning light illuminates for about 7 seconds and then turns off. This means the system is operational.

If any of the following conditions occur, the front air bag, side air bag, curtain air bag and pretensioner systems need servicing:

• The supplemental air bag warning light remains on after approximately 7 seconds.
• The supplemental air bag warning light flashes intermittently.
• The supplemental air bag warning light does not come on at all.

Under these conditions, the front air bag, side air bag, curtain air bag and pretensioner systems may not operate properly. They must be checked and repaired. It is recommended that you visit the nearest NISSAN certified LEAF dealer for this service.
WARNING
If the supplemental air bag warning light is on, it could mean that the front air bag, side air bag, curtain air bag and/or pretensioner systems will not operate in an accident. To help avoid injury to yourself or others, have your vehicle checked as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

Repair and replacement procedure
The front air bags, side air bags, curtain air bags and pretensioner(s) are designed to activate on a one-time-only basis. As a reminder, unless it is damaged, the supplemental air bag warning light will remain illuminated after inflation has occurred. Repair and replacement of these systems should be done only by a NISSAN certified LEAF dealer.

When maintenance work is required on the vehicle, the front air bags, side air bags, curtain air bags and pretensioner(s) and related parts should be pointed out to the person performing the maintenance. The power switch should always be in the LOCK position when working under the hood or inside the vehicle.

WARNING
- Once a front air bag, side air bag or curtain air bag has inflated, the air bag module will not function again and must be replaced. Additionally, the activated pretensioner(s) must also be replaced. The air bag module and pretensioner(s) should be replaced. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- The front air bag, side air bag and curtain air bag systems, and pretensioner system should be inspected if there is any damage to the front end or side portion of the vehicle. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- If you need to dispose of a supplemental air bag or pretensioner system or scrap the vehicle, it is recommended that you visit a NISSAN certified LEAF dealer for this service. Correct supplemental air bag and pretensioner system disposal procedures are set forth in the appropriate NISSAN Service Manual. Incorrect disposal procedures could cause personal injury.

- If there is an impact to your vehicle from any direction, your Occupant Classification Sensor (OCS) should be checked. It is recommended that you visit a NISSAN certified LEAF dealer to verify it is still functioning correctly. The OCS should be checked even if no air bags deploy as a result of the impact. Failure to verify proper OCS function may result in an improper air bag deployment resulting in injury or death.

15. Li-ion battery temperature gauge (P. 2-7)
SPEEDOMETER AND ODOMETER

The vehicle is equipped with a speedometer and odometer. The speedometer is located on the top of the meter cluster. The odometer is located within the vehicle information display.

Speedometer

The speedometer indicates the vehicle speed in miles per hour (mph) or kilometers per hour (km/h).

Odometer/twin trip odometer

The odometer 1 and twin trip odometer 2 are displayed on the vehicle information display when the power switch is in the ON or READY to drive position.

The odometer records the total distance the vehicle has been driven.

The twin trip odometer records the distance of individual trips.

Changing the display:

Pushing the TRIP switch 3 located on the left side of the combination meter panel changes the display as follows:

TRIP A → TRIP B → TRIP A

For additional information about the vehicle information display, refer to “Vehicle information display” in this section.

Resetting the trip odometer:

Pushing the TRIP switch 3 for approximately 1 second resets the trip odometer to zero.

2-6 Instruments and controls
LI-ION BATTERY TEMPERATURE GAUGE

The gauge indicates the temperature of the Li-ion battery.

The temperature of the Li-ion battery is within the normal range when the display is within the zone ① shown in the illustration.

The temperature of the Li-ion battery varies according to the outside air temperature and driving conditions.

NOTE:

• If the display indicates that the temperature of the Li-ion battery is near the red zone end of the normal range, reduce vehicle speed to decrease the temperature. If the indicator is over the normal range, the power provided to the traction motor is reduced when the power limitation indicator light is illuminated. Therefore, the vehicle is not as responsive when the accelerator is depressed while the power limitation light is illuminated. For additional information, refer to “Power limitation indicator light” in this section.

• If the outside temperature is extremely low, the Li-ion temperature gauge may not display a temperature reading. The vehicle may not be able to be put in the READY to drive mode. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

POWER METER

This meter displays the actual traction motor power consumption ③ and the regenerative brake power provided to the Li-ion battery ④.

The white dot ① in the display moves right or left depending on demand.

The white dot moves to the right when power is provided to the traction motor (Li-ion battery discharges).

The white dot moves to the left when power is generated and provided to the Li-ion battery by the regenerative brake system (Li-ion battery charging).

Instruments and controls 2-7
The power meter also indicates if the power provided to the motor is limited or if regenerative braking is limited. When power or regenerative braking is limited, the circles on the display change from a double circle to a single circle (2).

Regenerative braking is automatically reduced when the Li-ion battery is fully charged to prevent the Li-ion battery from becoming overcharged. Regenerative braking is also automatically reduced when the Li-ion battery temperature is high/low (indicated by the red/blue zones on the Li-ion battery temperature gauge) to prevent Li-ion battery damage.

The more regenerative braking is reduced, the more double circles change to single circles.

If the Li-ion battery charge is low, power provided to the traction motor is reduced. Motor output is also limited if the Li-ion battery temperature is high/low (indicated by the red/blue zones on the Li-ion battery temperature gauge) or the Li-ion battery charge level is low.

The more power provided to the traction motor is reduced, the more double circles change to single circles.

DRIVING RANGE

The driving range (1) (miles or km) provides an estimated distance that the vehicle can be driven before recharging is necessary. The driving range is constantly being calculated, based on the amount of available Li-ion battery charge and the actual power consumption average.

NOTE:

• The driving range display will flash when the low battery charge warning light illuminates. Additionally, if you continue to drive the vehicle in this state and the Li-ion battery is close to being completely discharged, “---” will be displayed. Charge the Li-ion battery as soon as possible. When the Li-ion battery is charged, the original display will be restored.

• After the vehicle is charged, the displayed driving range is calculated based on the actual average energy consumption of the previous driving. The displayed driving range will vary every time the vehicle is fully charged.

• The driving range increases or decreases when the air conditioner, heater or Li-ion battery warmer (if so equipped) is turned on or off, or when the ECO mode is selected, or when any other accessory is turned on or off based on driving.
LI-ION BATTERY AVAILABLE CHARGE GAUGE

The gauge (1) indicates the approximate available Li-ion battery charge to run the vehicle.

Charge the Li-ion battery before the display reaches the bottom line.

The low battery charge warning light (2) illuminates when the Li-ion battery available charge gauge is getting low. Charge as soon as it is convenient, preferably before the display reaches the bottom line. When the display reaches the bottom line and the low battery charge light illuminates, there is a very small reserve of Li-ion battery charge remaining.

NOTE:

- The number of segments illuminated on the Li-ion battery available charge gauge is determined by the available charge and the amount of charge the Li-ion battery is capable of storing at the current temperature.
- Temperature affects the amount of charge the Li-ion battery is capable of storing. The Li-ion battery is capable of storing less power when the Li-ion battery temperature is cold. The Li-ion battery is capable of storing more power when the Li-ion battery temperature is warm. The number of segments illuminated on the Li-ion battery available charge gauge can change based on the amount of power the Li-ion battery is capable of storing. For example, when the Li-ion battery becomes colder, more segments on the Li-ion battery available charge gauge illuminate because the available charge is a greater percentage of the Li-ion battery's capability of storing power. When the Li-ion battery becomes warmer, less segments on the Li-ion battery available charge gauge illuminate because the remaining energy is a lower percentage of the Li-ion battery's capability of storing power.
LI-ION BATTERY CAPACITY LEVEL GAUGE
This gauge indicates the amount of charge the Li-ion battery is capable of storing.
When the capacity of the Li-ion battery decreases with age and usage, the level of the gauge will also decrease.

OUTSIDE AIR TEMPERATURE
The outside air temperature is displayed in °F or °C.
The display may differ from the actual outside temperature displayed on various signs or billboards.

ECO INDICATOR
The ECO indicator displays how economically the vehicle is being operated.
The meter display is affected by the following conditions:
• Accelerator pedal operation
• Brake pedal operation
• Driving conditions
• Traffic conditions
• Heater and air conditioner usage
• Time the vehicle is not moving while the vehicle is in the READY to drive mode and accessories are on

**Instant ECO driving level**

The instant ECO driving level ① is displayed by the number of bars that increase (more economical driving) or decrease (less economical driving) depending on vehicle operation.

**Long term ECO driving level**

Long term ECO driving is indicated by ECO TREE symbols. The longer the vehicle is operated economically, the more segments of the large ECO TREE symbol ② are displayed. When all of the segments of the large ECO TREE symbol are displayed, a small ECO TREE indicator ③ is also displayed, and the large ECO TREE symbol display is reset. The longer the vehicle is operated economically, the more small ECO TREE symbols are displayed. The ECO TREE symbols that were illuminated while driving will turn off when the vehicle power is turned off. The ECO TREE symbols are stored in the navigation system to show long term efficient vehicle operation.

To increase the ECO driving level and for information about driving the vehicle efficiently, refer to “Improve driving range” in the “EV overview” section of this manual.

---

**CLOCK**

**For models without navigation system:**

Adjust the clock on the setting screen of the vehicle information display. For additional information, refer to “Settings” in this section.

If the power supply (12-volt battery) is disconnected, the clock will not indicate the correct time. Readjust the time.

**For models with navigation system:**

This clock is synchronized with the clock displayed on the navigation system screen. For additional information, refer to the LEAF Navigation System Owner’s Manual.

With all doors closed, apply the parking brake, fasten the seat belts and place the power switch for LEAF to the ON position without starting the engine. The following lights (if so equipped) will come on:

- Headlight warning light
- Low battery charge warning light
- Front fog light indicator light (if so equipped)
- Vehicle Dynamic Control (VDC) OFF indicator light
- Front passenger air bag status light

CHECKING LIGHTS

With all doors closed, apply the parking brake, fasten the seat belts and place the power switch for LEAF to the ON position without starting the engine. The following lights (if so equipped) will come on:

- Headlight warning light
- Low battery charge warning light
- Front fog light indicator light (if so equipped)
- Vehicle Dynamic Control (VDC) OFF indicator light
- Front passenger air bag status light

The following lights (if so equipped) come on briefly and then turn off:

- 12-volt battery charge warning light

The DC/DC converter converts 400 volt Li-ion battery voltage to charge the 12-volt battery. This light illuminates continuously after the bulb is checked when the power switch is in the ON position, and turns off when the power switch is placed in the READY to drive position.

When this warning light illuminates, a chime sounds and the following warnings are also displayed.
- Master warning (red)
- EV system warning light

The following messages also flash on and off on the vehicle information display.

- If the vehicle is being driven; “Stop the vehicle” and if the vehicle is stopped; “When parked apply parking brake”. When these messages flash, immediately stop the vehicle in a safe location, pull the parking brake switch and push the P (Park) position switch on the shift lever to place the vehicle in the P (Park) position. The warning on the meter and the chime stops when the parking brake is operated or the vehicle is in the P (Park) position. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

For additional information, refer to “Vehicle information display” in this section.
CAUTION

- The DC/DC converter system may not be functioning properly if the 12-volt battery charge warning light illuminates continuously when the power switch is in the READY to drive position. Immediately stop the vehicle in a safe location and have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- The DC/DC converter system may not be functioning properly if the 12-volt warning light illuminates continuously when the power switch is in the READY to drive position. Do not charge the 12-volt battery while this warning light is illuminated. It may lead to a malfunction of the DC/DC converter system. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

NOTE:
- If the vehicle does not go into the READY to drive position (when the power switch is pushed and the brake pedal is depressed), jump-start the vehicle to place the power switch in the READY to drive position. For additional information, refer to “Jump starting” in the “In case of emergency” section of this manual.
- Do not jump-start the vehicle. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service:
  - If the 12-volt charge warning light turns off when the vehicle is in the READY to drive mode, the 12-volt battery may be discharged or there may be a malfunction in the 12-volt battery related system.
  - If the 12-volt charge warning light continues to illuminate when the vehicle is in the READY to drive mode, there may be a malfunction in the DC/DC converter. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

ABS or Anti-lock Braking System (ABS) warning light

When the power switch is in the ON or READY to drive position, the Anti-lock Braking System (ABS) warning light illuminates and then turns off. This indicates the ABS is operational.

If the ABS warning light illuminates while the power switch is in the READY to drive position, or while driving, it may indicate the ABS is not functioning properly. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

If an ABS malfunction occurs, the anti-lock function is turned off. The brake system then operates normally, but without anti-lock assistance. For additional information, refer to “Brake system” in the “Starting and driving” section of this manual.

Approaching Vehicle Sound for Pedestrians (VSP) system warning light

The Approaching Vehicle Sound for Pedestrians (VSP) system warning light is located on the instrument panel.
This light comes on if there is a malfunction in the VSP system.

If the VSP system warning light illuminates while the power switch is in the ON position, or in the READY to drive position, it may indicate the VSP system is not functioning properly. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

For additional information, refer to “Approaching Vehicle Sound for Pedestrians (VSP) system” in the “EV overview” section of this manual.

**BRAKE** system warning light (yellow)

This light functions for both the cooperative regenerative brake and the electronically driven intelligent brake systems. When the power switch is placed in the ON position or in the READY to drive position, the light remains illuminated for about 2 or 3 seconds. If the light illuminates at any other time, it may indicate that the cooperative regenerative brake and/or the electronically driven intelligent brake systems are not functioning properly. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service. If the BRAKE warning light (red) also illuminates, stop the vehicle immediately and have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**WARNING**

- Pressing the brake pedal when the power switch position is not in the ON or READY to drive position and/or low brake fluid level may increase the stopping distance and braking will require greater pedal effort as well as pedal travel.
- If the brake fluid level is below the minimum or MIN mark on the brake fluid reservoir, do not drive until the brake system has been checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- The cooperative regenerative brake system may not be working properly if the brake system warning light illuminates when the READY to drive indicator light is ON. If you judge it to be safe, drive carefully to the nearest service station for repairs. Otherwise, have your vehicle towed because driving could be dangerous.

**BRAKE** or **BRAKE** warning light (red)

When the power switch is placed in the ON position or in the READY to drive position, the light remains illuminated for about a few seconds. If the light illuminates at any other time, it may indicate that the hydraulic brake system is not functioning properly. If the BRAKE warning light illuminates, stop the vehicle immediately and have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**PARKING brake indicator:**

When the power switch is placed in the ON position, the light comes on when the parking brake is applied.

**Low brake fluid warning light:**

When the power switch is in the ON position, the light warns of a low brake fluid level. If this warning light illuminates, the Vehicle Dynamic Control (VDC) warning light and the brake system warning light (yellow) also illuminate.

If the light illuminates while the power switch is in the READY to drive position with the parking brake not applied, stop the vehicle and perform the following items.

**Instruments and controls** 2-15
1. Check the brake fluid level. If brake fluid is necessary, add fluid and have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service. For additional information, refer to “Brake fluid” in the “Maintenance and do-it-yourself” section of this manual.

2. If the brake fluid level is correct, have the warning system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**WARNING**

- Your brake system may not be working properly if the warning light is on. Driving could be dangerous. If you judge the brake system to be safe, drive carefully to the nearest service station for repairs. Otherwise, have your vehicle towed because driving it could be dangerous.
- Pressing the brake pedal when the power switch position is not in the ON or READY to drive position and/or low brake fluid level may increase the stopping distance and braking will require greater pedal effort as well as pedal travel.

- If the brake fluid level is below the minimum or MIN mark on the brake fluid reservoir, do not drive until the brake system has been checked at a NISSAN certified LEAF dealer.

**Electric shift control system warning light**

This light illuminates to warn when a malfunction occurs in the electric shift control system. When the master warning light illuminates, the chime sounds and the message, “When parked apply parking brake”, is displayed on the vehicle information display.

When the power switch is in the OFF position, the chime sounds continuously. Make sure the parking brake is applied.

Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**Electric Vehicle (EV) system warning light**

This light illuminates if there is a malfunction in the following systems. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

- Traction motor and inverter system
- Charge port or on board charger
- Li-ion battery system
- Cooling system
- Shift control system
- Emergency shut off system is activated. For additional information, refer to “Emergency shut-off system” in the “EV overview” section of this manual.

**Headlight warning light**

This light illuminates if the LED headlights are malfunctioning. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**Low battery charge warning light**

This light illuminates when the available Li-ion battery charge is getting low. Charge as soon as it is possible, preferably before the Li-ion battery available charge gauge reaches the bottom line.
NOTE:
The low battery charge warning light turns off immediately before the Li-ion battery is completely discharged and the vehicle will stop. If the Li-ion battery becomes completely discharged, the vehicle must be charged in order to be driven.

Low tire pressure warning light
Your vehicle is equipped with a Tire Pressure Monitoring System (TPMS) that monitors the tire pressure of all tires.

The low tire pressure warning light warns of low tire pressure or indicates that the TPMS is not functioning properly.

After the power switch is placed in the ON position, this light illuminates for about 1 second and then turns off.

Low tire pressure warning
If the vehicle is being driven with low tire pressure, the warning light will illuminate. A CHECK TIRE PRESSURE warning also appears on the vehicle information display.

When the low tire pressure warning light illuminates, you should stop and adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label. The low tire pressure warning light does not automatically turn off when the tire pressure is adjusted. After the tire is inflated to the recommended pressure, the vehicle must be driven at speeds above 16 mph (25 km/h) to activate the TPMS and turn off the low tire pressure warning light. Use a tire pressure gauge to check the tire pressure.

The CHECK TIRE PRESSURE warning appears each time the power switch is placed in the ON position as long as the low tire pressure warning light remains illuminated.

For additional information, refer to “Vehicle information display” in this section, “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section and “In case of emergency” section of this manual.

TPMS malfunction
If the TPMS is not functioning properly, the low tire pressure warning light will flash for approximately 1 minute when the power switch is placed in the ON position. The light will remain on after the 1 minute. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service. The CHECK TIRE PRESSURE warning does not appear if the low tire pressure warning light illuminates to indicate a TPMS malfunction.

For additional information, refer to “Vehicle information display” in this section and “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section of this manual.

WARNING
- Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
- If the light does not illuminate when the power switch is placed in the ON position, have the vehicle checked. It is recommended that you visit a NISSAN certified LEAF dealer as soon as possible for this service.
If the light illuminates while driving, avoid sudden steering maneuvers or abrupt braking, reduce vehicle speed, pull off the road to a safe location and stop the vehicle as soon as possible. Driving with under-inflated tires may permanently damage the tires and increase the likelihood of tire failure. Serious vehicle damage could occur and may lead to an accident and could result in serious personal injury or death. Check the tire pressure for all four tires. Adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label to turn the low tire pressure warning light OFF. If the light still illuminates while driving after adjusting the tire pressure, a tire may be flat or the TPMS may be malfunctioning. If you have a flat tire, replace it with a spare tire as soon as possible. If no tire is flat and all tires are properly inflated, have the vehicle checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

When replacing a wheel without the TPMS such as a spare tire, the TPMS will not function and the low tire pressure warning light will flash for approximately 1 minute. The light will remain on after 1 minute. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer as soon as possible for tire replacement and/or system resetting.

Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.

**CAUTION**

- The TPMS is not a substitute for the regular tire pressure check. Be sure to check the tire pressure regularly.
- If the vehicle is being driven at speeds of less than 16 mph (25 km/h), the TPMS may not operate correctly.
- Be sure to install the specified size of tires to the four wheels correctly.

---

Master warning light (red/yellow)

There are two types of master warning lights: yellow and red. These lights illuminate if any warning lights or indicator lights are illuminated or if various vehicle information warnings appear in the vehicle information display.

**Yellow master warning light**

The yellow master warning light is located on the upper display.

This light illuminates when a yellow warning light on the lower display is illuminated or when a message is displayed on the vehicle information display.

**Red master warning light**

The red master warning light is located on the upper display.

This light illuminates when a red warning light on the lower display is illuminated or when a warning is displayed on the vehicle information display.

**Power steering warning light**

When the power switch is in the ON position, the electric power steering warning light illuminates and turns off when the power switch is placed in the READY to drive position. This indicates the electric power steering system is operational.
If the electric power steering warning light illuminates while the READY to drive indicator light is ON, it may indicate the electric power steering system is not functioning properly and may need servicing. Have the electric power steering system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

When the electric power steering warning light illuminates while the READY to drive indicator is ON, the power assist to the steering will cease operation but you will still have control of the vehicle. At this time, greater steering efforts are required to operate the steering wheel, especially in sharp turns and at low speeds.

For additional information, refer to “Power steering system” in the “Starting and driving” section of this manual.

Seat belt warning light

The light and chime remind you to fasten your seat belts. The light illuminates whenever the power switch is placed in the ON position, and will remain illuminated until the driver’s seat belt is fastened. At the same time, the chime will sound for approximately 6 seconds unless the driver’s seat belt is securely fastened.

The seat belt warning light for the front passenger will illuminate if the seat belt is not fastened when the front passenger’s seat is occupied. The front passenger seat belt warning light does not activate until 5 seconds after the power switch is in the ON position.

For additional information, refer to “Seat belts” in the “Safety — Seats, seat belts and supplemental restraint system” section of this manual for precautions on seat belt usage.

Supplemental air bag warning light

After turning the power switch to the ON position, the supplemental air bag warning light will illuminate. The supplemental air bag warning light will turn off after about 7 seconds if the supplemental front air bag and supplemental side air bag, curtain side-impact air bag systems and/or pretensioner seat belt are operational.

If any of the following conditions occur, the front air bag, side air bag, curtain air bag and/or pretensioner systems need servicing and your vehicle must be taken to your nearest NISSAN certified LEAF dealer.

• The supplemental air bag warning light remains on after approximately 7 seconds.

Unless checked and repaired, the Supplemental Restraint Systems and/or the pretensioners may not function properly.

For additional information, refer to “Supplemental restraint system (SRS)” in the “Safety — Seats, seat belts and supplemental restraint system” section of this manual.

WARNING

If the supplemental air bag warning light is on, it could mean that the front air bag, side air bag, curtain air bag and/or pretensioner systems will not operate in an accident. To help avoid injury to yourself or others, have your vehicle checked by a NISSAN certified LEAF dealer as soon as possible.
INDICATOR LIGHTS
For additional information, refer to “Vehicle information display” in this section.

ECO mode switch indicator light
This indicator illuminates within the vehicle information display when the ECO mode has been activated.
The ECO mode is used to help extend that range that the vehicle can be driven by consuming less power.

Exterior light indicator light
This indicator illuminates when the headlight switch is turned to the AUTO, or position and the front parking lights, side marker lights, tail and license plate lights are on. The indicator turns off when these lights are turned off.

Front fog light indicator light (if so equipped)
The front fog indicator light illuminates when the front fog lights are on. For additional information, refer to “Fog light switch” in this section.

Front passenger air bag status light
The front passenger air bag status light (located on the center of the instrument panel) will be lit and the passenger front air bag will be turned off depending on how the front passenger seat is being used.
For front passenger air bag status light operation, refer to “NISSAN Advanced Air Bag System (front seats)” in the “Safety — Seats, seat belts and supplemental restraint system” section of this manual.

High beam indicator light (blue)
This light illuminates when the headlight high beam is on and goes out when the low beam is selected.

Plug-in indicator light
This light illuminates when the charge connector is connected to the vehicle and blinks during charging.

NOTE:
If the charge connector is connected to the vehicle, the power switch can not be placed in the READY to drive position.

Power limitation indicator light
When the power limitation indicator light is illuminated, the power provided to the traction motor is reduced. Therefore the vehicle is not as responsive when the accelerator is depressed while the power limitation light is illuminated.
When this light comes on, the warning display appears on the center display and the vehicle information display. Follow the instructions provided on the center display.
This light illuminates in the following conditions.
• Li-ion battery available charge is extremely low
• Li-ion battery temperature is very low (approximately −4°F (−20°C))
• When the temperature of the EV system is high (motor, inverter, coolant system, Li-ion battery etc.)
• When the EV system has a malfunction.
If the low battery charge warning light is illuminated, charge the Li-ion battery as soon as possible.
If this indicator illuminates because the Li-ion battery is cold due to low outside temperatures, move the vehicle to a warmer location. The Li-ion battery temperature may be increased by charging the Li-ion battery.

If the light illuminates when the EV system becomes hot due to continuous hill climbing, either continue driving at a slower safe speed or stop the vehicle in a safe location. If this indicator does not turn off, have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

The indicator illuminates when a part in the EV system has malfunctioned. If the indicator illuminates in a situation other than those described above, or if it does not turn off, there may be a system malfunction. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**WARNING**

Power limitation mode can result in reduced power and vehicle speed. The reduced speed may be lower than other traffic, which could increase the chance of a collision. Be especially careful when driving. If the vehicle cannot maintain a safe driving speed, pull to the side of the road in a safe area. Charge the Li-ion battery if the charge is low or allow the Li-ion battery to cool.

**READY to drive indicator light**

The READY to drive indicator light illuminates when the EV system is powered and the vehicle may be driven.

The READY to drive indicator light will turn off in the following conditions.

- Certain EV system malfunctions.
- The READY to drive indicator light turns off immediately before the Li-ion battery is completely discharged. If the Li-ion battery becomes completely discharged, the vehicle must be charged in order to be driven. For additional information, refer to “Low battery charge warning light” in this section.

**Security indicator light**

This light blinks when the power switch is in the ACC, OFF or LOCK position. This function indicates the security system equipped on the vehicle is operational.

If the security system is malfunctioning, this light will remain on while the power switch is in the ON position. For additional information, refer to “Security systems” in this section.

**Slip indicator light**

This indicator will blink when the VDC system or the traction control system is operating, thus alerting that the vehicle is nearing its traction limits. The road surface may be slippery.

You may feel or hear the system working; this is normal. The light will blink for a few seconds after the VDC system stops limiting wheel spin.

The indicator light also comes on when you place the power switch in the ON position.

The light will turn off after approximately 2 seconds if the system is operational. If the light does not come on, have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**Instruments and controls  2-21**
Turn signal/hazard indicator lights
This light flashes when the turn signal switch lever or hazard switch is turned on.

Vehicle Dynamic Control (VDC) OFF indicator light
This light illuminates when the Vehicle Dynamic Control (VDC) switch is pushed to OFF. This indicates that the VDC system is not operating. For additional information, refer to “Vehicle Dynamic Control (VDC) system” in the “Starting and driving” section of this manual.

AUDIBLE REMINDERS
Brake pad wear warning
The disc brake pads have audible wear warnings. When a brake pad requires replacement, it will make a high pitched scraping sound when the vehicle is in motion. This scraping sound will first occur only when the brake pedal is depressed. After more wear of the brake pad, the sound will always be heard even if the brake pedal is not depressed. Have the brakes checked as soon as possible if the warning sound is heard.

Electric shift control system reminder chime
If an improper shift operation is performed, for safety reasons a chime will sound and at the same time, depending on the conditions, the operation will be canceled or the shift position will switch to the N (Neutral) position.
For additional information, refer to “Driving the vehicle” in the “Starting and driving” section of this manual.

Key reminder chime
A chime will sound if the driver’s side door is opened while the power switch is pushed to the ON or ACC position.
Make sure that the power switch is pushed to the OFF position, and take the Intelligent Key with you when leaving the vehicle.

Light reminder chime
The light reminder chime will sound when the driver side door is opened with the light switch in the $\text{\textcircled{D}}$ or $\text{\textcircled{D}}$ position, and the power switch is in the ACC, OFF or LOCK position.
Turn the light switch off when you leave the vehicle.

Parking brake reminder chime
A chime sounds if the parking brake is set and the vehicle is driven. The chime will stop if the parking brake is released or the vehicle speed returns to zero.

Power switch reminder chime
The power switch reminder chime will sound when the driver’s door is opened while the power switch is in the ON or READY to drive position. Push the power switch to the OFF position.

Seat belt warning chime
The seat belt warning chime will sound for about 6 seconds unless the driver’s seat belt is securely fastened.

12-volt battery charge warning chime
If the 12-volt battery charge warning light illuminates, the chime will sound when a warning message is displayed on the vehicle information display on the lower display.
When the chime sounds, immediately stop the vehicle in a safe location and push the P (Park) position switch on the shift lever and apply the parking brake. The 12-volt battery charge warning light turns off on the lower display and the chime will stop when the parking brake is applied or the vehicle is placed in the P (Park) position. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service. For additional information, refer to “12-volt battery charge warning light” in this section.

The vehicle information display (1) is located in the lower display, and it displays charging related information, Average electricity consumption/Instant electricity consumption, Average vehicle speed, Driving distance/Driving time (Elapsed time), shift position indicator, the cruise control, the Intelligent Key operation information and other warnings and information.

For additional information about the odometer, refer to “Odometer/twin trip odometer” in this section.

For additional information about the cruise control, refer to “Cruise control” in the “Starting and driving” section of this manual.

For additional information about the NISSAN Intelligent Key® system, refer to “NISSAN Intelligent Key® system” in the “Pre-driving checks and adjustments” section of this manual.
INDICATORS FOR OPERATION

1. READY to drive position operation indicator
   This indicator appears while the vehicle is in the P (Park) position. This indicator means that the EV system will start when the power switch is pressed with the brake pedal depressed.

2. Key is not detected warning
   This warning appears in either of the following conditions.

   **No key inside the vehicle:**
   This warning appears when the door is closed with the Intelligent Key left outside the vehicle and the power switch in the ACC or ON position. Make sure that the Intelligent Key is inside the vehicle.

   **Unregistered Intelligent Key:**
   This warning appears when the power switch is placed in the ON, ACC or READY to drive position and the Intelligent Key cannot be recognized by the system. You cannot place the power switch in the READY to drive position with an unregistered key. Use an Intelligent Key that has been registered.

For additional information, refer to “NISSAN Intelligent Key® system” in the “Pre-driving checks and adjustments” section of this manual.

3. Intelligent Key® battery discharge indicator
   This indicator appears when the Intelligent Key battery is running out of power. If this indicator appears, replace the battery with a new one. For additional information, refer to “NISSAN Intelligent Key® battery replacement” in the “Maintenance and do-it-yourself” section of this manual.
4. EV system operation for discharged Intelligent Key® system indicator
This indicator appears when the Intelligent Key battery is running out of power and when the Intelligent Key system and vehicle are not communicating normally.
If this indicator appears, touch the power switch with the Intelligent Key while depressing the brake pedal. For additional information, refer to “NISSAN Intelligent Key® battery discharge” in the “Starting and driving” section of this manual.

5. Door/rear hatch open warning (power switch is in the ON position)
This warning appears if any of the doors and/or the rear hatch are open or not closed securely. The vehicle icon indicates which door or the rear hatch is open on the display. Make sure that all of the doors and the rear hatch are closed.
This warning also appears alternating with SHIFT “P” warning while the driver’s door is opened with the shift position in any position other than the P (Park) position. For additional information, refer to “SHIFT “P” warning” in this section.

6. Intelligent Key® system warning
This warning appears if there is a malfunction in the Intelligent Key system.
If this warning appears while the power switch position is in the ON position, the power switch can not be switched to the READY to drive position. If this warning appears while the power switch is in the READY to drive position, the vehicle can be driven. However, it is recommended that you visit a NISSAN certified LEAF dealer.

7. Driver alert
This warning appears when the previously set time for a break is reached. You can set the time for up to 6 hours in the setting menu. For additional information, refer to “Trip computer” in this section.

8. Low outside air temperature
The outside air temperature is displayed in °F or °C in the range of −20°F to 140°F (−30°C to 60°C).
The outside air temperature mode includes a low temperature warning feature. If the outside air temperature is below 37°F (3°C), the warning is displayed on the screen.
The outside temperature sensor is located in front side of the vehicle. The sensor may be affected by road, wind directions and other driving conditions. The display may differ from the actual outside temperature or the temperature displayed on various signs or billboards.

9. Low washer warning (if so equipped)
This warning appears when the washer tank fluid is at a low level. Add windshield-washer fluid as necessary. For additional information, refer to “Windshield-washer fluid” in the “Maintenance and do-it-yourself” section of this manual.

10. Light reminder warning
This warning appears when the power switch is turned to the OFF position but the headlight switch is still ON. Turn off the headlight switch.

11. Plug-in indicator
This indicator appears when the charge connector is connected.
If the charge connector is connected to the vehicle, the power switch can not be placed in the READY to drive position.
12. Remove charge connector warning
This warning appears when the power switch is in the ACC or ON position and if the power switch is pushed to the READY to drive position with the brake pedal depressed, while the charge connector is inserted to the vehicle. Remove the charge connector.

13. Electric shift control system warning
This message appears if there is a malfunction in the electric shift control system. This message appears when the parking brake is not applied, even after the vehicle has been parked. The master warning light (red) also illuminates and the chime sounds. If the power switch cannot be placed in the OFF position, apply the parking brake and then place the power switch in the OFF position.

Apply parking brake. The message in the vehicle information display turns off and the chime stops. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

14. Shift control system (T/M) warning
This warning appears if there is a malfunction in the electric shift control system but operation of the electric shift control is still possible. The master warning (yellow) light also illuminates and the chime sounds. When this occurs, check the shift position indicator by the shift lever or vehicle information display in the meter to make sure that shifting has been performed properly. It is recommended that you contact a NISSAN certified LEAF dealer as soon as possible.

15. Shift position warning
This warning appears if the system cannot detect the shift position. Make sure the vehicle is placed in a position properly.

The master warning light (yellow) also illuminates and the chime sounds. Check the shift position of the vehicle.

16. Li-ion battery low charge warning
This indicator appears when the Li-ion battery is getting low. The low battery charge warning light and the master warning light (yellow) also illuminate. Charge the Li-ion battery as soon as possible. The [i] symbol is shown on the vehicle information display, this indicates that further information is available on the navigation display (models with navigation system). Check the navigation display (models with navigation system) for further information and instructions.

17. Power limitation warning
This display appears when the Li-ion battery capacity is getting too low to move the vehicle or if there is any reason to limit traction power (Li-ion battery low or high temperature etc.). The power limitation indicator light and the master warning light (yellow) also illuminate. The [i] symbol is shown on the vehicle information display. This indicates that further information is available on the navigation display (models with navigation system). Check the navigation display (models with navigation system) for further information and instructions.

18. DC/DC converter warning
This warning appears if the DC/DC converter system is not functioning properly. The 12-volt battery charge warning (red) light and the master warning light also illuminate. Stop the vehicle in a safe location and contact a NISSAN certified LEAF dealer.
19. Apply parking brake warning
This warning appears if the DC/DC converter system is not functioning properly after the “Stop the vehicle” message above. If this warning appears on the display, stop the vehicle in a safe location and push the P (Park) position switch on the shift lever. If the parking brake is applied, the display turns off. Contact a NISSAN certified LEAF dealer.

20. Check tire pressure warning
This warning appears when the low tire pressure warning light in the meter illuminates and low tire pressure is detected. The warning appears each time the power switch is placed in the ON position as long as the low tire pressure warning light remains illuminated.

If this warning appears, stop the vehicle and adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label. For additional information, refer to “Low tire pressure warning light” in this section and “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section of this manual.

21. Cruise control indicator
   
   **Cruise main switch indicator**

   This indicator is displayed when the cruise control main switch is pushed. When the main switch is pushed again, the indicator disappears. When the cruise control main switch indicator is displayed, the cruise control system is operational.

   **Cruise set switch indicator**

   This indicator is displayed while the vehicle speed is controlled by the cruise control system. If the indicator blinks while the power switch is in the READY to drive position, it may indicate that the cruise control system is not functioning properly. Have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

   For additional information, refer to “Cruise control” in the “Starting and driving” section of this manual.

22. Shift position indicator

   The shift position indicator shows the vehicle position when the power switch is in the ON or READY to drive position. For additional information, refer to “Driving the vehicle” in the “Starting and driving” section of this manual.

23. SHIFT “P” warning

   This warning appears alternately with door/rear hatch open warning when the driver’s door is opened with the shift position in any position other than the P (Park) position. For additional information, refer to “Door/rear hatch open warning (power switch is in the ON position)” in this section. If this warning appears, push the P (Park) position switch and place in the P (Park) position.

24. Intelligent Key error

   After the power switch is pushed to the ON position, this light comes on for about 2 seconds and then turns off.

   The I-Key System Error message warns of a malfunction with the Intelligent Key system. If the light comes on while the motor is stopped, it may be impossible to start the motor.

   If the light comes on while the motor is running, you can drive the vehicle. However in these cases, it is recommended that you contact a NISSAN certified LEAF dealer for repair as soon as possible.

25. Parking brake release warning

   This warning appears when the vehicle speed is above 4 mph (7km/h) and the parking brake is applied.

   **Instruments and controls** 2-27
TRIP COMPUTER

Switches for the trip computer are located on the left side of the combination meter panel. To operate the trip computer, push the following switches:

- A switch
- B switch

When the power switch is pushed to the ON position, modes of the trip computer can be selected by pushing the A switch. Each time the A switch is pushed, the display will change as follows:

1. Charging time
2. Energy economy
3. State of charge
4. Average speed
5. Driving distance and elapsed time
6. Setting
7. Warning check*

**NOTE:**

* This item is available only when a warning is displayed. Select this menu to see details of warnings.

Charging time → Energy economy → State of charge → Average speed → Driving distance and elapsed time → Setting → Warning check*

**Est. Time**

P

Charging time

Displays the estimated time to a full Li-ion charge based on the Charging Mode selected.

The time needed to charge the Li-ion battery charges based on:

- Outside temperature
- Li-ion battery temperature
- Available electrical power supplied to the charger
NOTE:
• Immediately after charging has finished, the charge time will be displayed as “--:--”.
• The estimated charging time stops updating if the air conditioner is turned on while the Li-ion battery is charging. The estimated charging time updates approximately 15 minutes after the air conditioner is turned off.
• The 6 kW and the 3 kW charging time typically shows different times to reach a full charge.
• However, the same charging time may be shown for both the 6 kW and the 3 kW based on the Li-ion battery state of charge and battery temperature.
• The system may automatically slow the battery charge to prevent the battery from becoming overcharged.
• Charging may finish sooner than the displayed charging time.

Energy economy

Average energy economy:
The average energy economy mode shows the average energy economy since the last reset. Resetting the average energy economy is done by pushing and holding the  button for longer than 1 second. (The average speed is also reset at the same time.)
The display is updated every 30 seconds. At about the first 0.3 mile (500 m) after a reset, the display shows “----”.

Instant energy economy:
The instant energy economy mode shows the instant energy economy via a moving bar graph. When regenerated energy is being stored in the Li-ion battery while driving, the instant energy economy display will show the maximum value.
State of charge (%)
Displays the vehicle's current state of charge.

Average speed
The average speed mode shows the average vehicle speed (mph or km/h) since the last reset. The average speed (mph or km/h) can be reset by pushing the switch for longer than 1 second.
The display is updated every 30 seconds. For the first 30 seconds after a reset, the display shows “----”.

Driving distance and elapsed time
Driving distance:
The driving distance mode shows the total distance (miles or km) the vehicle has been driven since the last reset. The distance can be reset by pushing the switch for longer than 1 second. (The elapsed time is also reset at the same time.)

Elapsed time:
The elapsed time mode shows the time since the last reset. The displayed time can be reset by pushing the switch for longer than 1 second. (The driving distance is also reset at the same time.)
Settings cannot be accessed while driving. The message, “Settings can only be accessed when stationary” is also displayed on the vehicle information display.

- **Switch A** and **Switch B** are used in the settings mode.
  - Push the **Switch A** to select a menu.
  - Push the **Switch B** to scroll through the menus.

**Skip:**
- Push the **Switch A** to move to the warning check mode.
- Push the **Switch B** to select other menus.

**Clock:**
- The clock can be adjusted in this menu.
  - **Back**
    - Select this submenu to return to the top page of the settings mode.
  - **Set Clock**
    - Adjust the time (hour and minute) of the clock.

For models without a center display, the day of the week can also be set to use it for the “Climate Ctrl. Timer” setting. For additional information, refer to “Climate Ctrl. timer” in the “Display screen, heater, air conditioner, audio and phone systems” section of this manual.

- **24/12Hr (24 hours or 12 hours)**
  - Select either the 24-hour clock display or the 12-hour display.

**Maintenance:**
- There are five submenus under the maintenance menu.
  - **Back**
    - Select this submenu to return to the top page of the settings mode.
  - **Tire**
    - Select this submenu to set or reset the distance for replacement of the tires.
  - **Other -1, -2 and -3**
    - Select this submenu to set or reset the distance for replaceable/maintenance items. Up to three other items can be monitored. Set other items if required.

**Alarms:**
- The alarms menu can be set to notify the following items. There are three submenus under the alarms menu.
  - **Back**
    - Select this submenu to return to the top page of the settings mode.
  - **Driver Alert**
    - Select this submenu to set the driver alert period.
Outside temp
Select this submenu to display the low outside temperature (On or Off).

Units:
Units displayed can be set for the following items on this menu.
• Back
  Select this submenu to return to the top page of the settings mode.
• Temperature
• Speed

Language:
Select this submenu to choose the language displayed.
To return to the top page of the settings mode, select “BACK”.

Effects:
The start up sound can be selected or turned off from this menu.
Five submenus under the effects menu.
When a menu item is selected, the selected sound plays.

Back
Select this submenu to return to the top page of the settings mode.
• Sound 1
• Sound 2
• Sound 3
• Off

Factory settings:
Select this menu to reset all values to the factory default settings except for the odometer settings.

NOTE:
When resetting to the factory settings, all previous settings made are restored to the default settings.

To return to the top page of the settings mode, select “BACK”.

Warning check
Skip:
Push the switch to move to the Estimated charge time display.
Push the switch to select another menu.

Detail:
This item is available only when a warning is displayed.
Select this menu to see details of warnings.

2-32 Instruments and controls
WARNING INFORMATION DISPLAYS

Low battery warning

When the low battery charge warning light and the master warning light (yellow) illuminate, the system displays a message on the navigation system screen that warns the driver that the Li-ion battery power level is low.

1. The notification is displayed on the upper left side of the STATUS screen. Touch [Show] to display the screen showing detailed information.

2. The system displays a message screen and announces the contents of the message to warn that the Li-ion battery power level is low. Check the message displayed on the screen. Touch [Nearby Stations] to search all charging stations that are located around the current vehicle position.

3. Touch [BACK] or push the MAP button to return to the vehicle location screen.
NOTE:

- The low battery warning can be set to off. Refer to LEAF Electric Vehicle Information System Owner's Manual.
- When the battery power level is low, the system automatically obtains charging station information.

Limited power warning

When the Li-ion battery power level is extremely low or the Li-ion battery malfunctions, the power limitation indicator \( \) and the master warning light (yellow) \( \) illuminate in the meter and the system displays a message on the navigation system screen in order to inform the driver that power output is restricted.

1. The notification is displayed on the upper left side of the screen. Touch [Show] to display the screen showing detailed information.

2. The system displays a message screen and announces the contents of the message to warn that power output is restricted and inform the driver of the reason for this occurrence and what action is to be taken.
1. Tire replacement indicator

This indicator appears when the customer set distance comes for replacing tires. You can set or reset the distance for replacing tires. For additional information, refer to “Trip computer” in this section.

**WARNING**

The tire replacement indicator is not a substitute for regular tire checks, including tire pressure checks. For additional information, refer to “Changing wheels and tires” in the “Maintenance and do-it-yourself” section of this manual. Many factors including tire inflation, alignment, driving habits and road conditions affect tire wear and when tires should be replaced. Setting the tire replacement indicator for a certain driving distance does not mean your tires will last that long. Use the tire replacement indicator as a guide only and always perform regular tire checks. Failure to perform regular tire checks, including tire pressure checks could result in tire failure. Serious vehicle damage could occur and may lead to a collision, which could result in serious personal injury or death.

2. “Other” indicators

These indicators appear when the customer set distance comes for checking or replacing maintenance items other than the tires. Other maintenance items can include such things as the tire rotation. You can set or reset the distance for checking or replacing the items. For additional information, refer to “Trip computer” in this section. For scheduled maintenance items and intervals, refer to the NISSAN Service and Maintenance Guide.
1. Timer setting status (charging and Climate Ctrl.) and charge connector lock setting status

The timer setting status (ON or OFF) of the charge and the climate control and the charge connector lock setting status (AUTO, LOCK or UNLOCK) can be checked.

2. Charging Timer setting confirmation

The "Charging Timer" starting hours, minutes and days for the next charge time that has been set can be checked.

3. Charging time

Displays the estimated time to charge the Li-ion battery to a full charge. When fully charged, the remaining charging time is displayed as "--:--:--".

NOTE:
Charging may finish sooner than the displayed charging time.

4. Climate Ctrl. Timer setting confirmation

The set time for ending hours and days of the Climate Ctrl. Timer is displayed.

INDICATOR FOR TIMER

When the power switch is turned off, this display appears for 10 seconds. If the switch is pushed within 10 seconds, the display can be selected and each setting information display can be confirmed.

Your vehicle has two types of security systems, as follows:

• Vehicle security system
• NISSAN Vehicle Immobilizer System

The security status is shown by the security indicator light.
VEHICLE SECURITY SYSTEM

The vehicle security system provides visual and audio alarm signals if someone opens the doors, or rear hatch when the system is armed. It is not, however, a motion detection type system that activates when a vehicle is moved or when a vibration occurs.

The system helps deter vehicle theft but cannot prevent it, nor can it prevent the theft of interior or exterior vehicle components in all situations. Always secure your vehicle even if parking for a brief period. Never leave your keys in the vehicle, and always lock it when it is left unattended. Be aware of your surroundings, and park in secure, well-lit areas whenever possible.

Many devices offering additional protection, such as component locks, identification markers, and tracking systems, are available at auto supply stores and specialty shops. A NISSAN certified LEAF dealer may also offer such equipment. Check with your insurance company to see if you may be eligible for discounts for various theft protection features.

How to arm the vehicle security system

1. Close all windows.

   The system can be armed even if the windows are open.

2. Place the power switch in the LOCK or OFF position and remove the Intelligent Key from the vehicle.

3. Close all doors. Lock all doors. The doors can be locked with:
   • the LOCK button on the Intelligent Key
   • any request switch
   • the power door lock switch
   • the mechanical key

4. Confirm that the security indicator light illuminates. The security indicator light stays on for about 30 seconds. The vehicle security system is now pre-armed. After about 30 seconds the vehicle security system automatically shifts into the armed phase. The security light begins to flash once every approximately 3 seconds. If, during this 30-second pre-arm time period, the door is unlocked, or the power switch is placed in the ACC or ON position, the system will not arm.

Even when the driver and/or passengers are in the vehicle, the system will activate with all doors locked and the power switch in the OFF position. When placing the power switch to the ACC or ON position, the system will be released.

Vehicle security system activation

The vehicle security system will give the following alarm:
• The headlights blink and the horn sounds intermittently.
• The alarm automatically turns off after approximately 50 seconds. However, the alarm reacts if the vehicle is tampered with again.

The alarm is activated by:
• Unlocking the door without using the Intelligent Key, the request switch or the key. (Even if the door is opened by releasing the door inside lock knob, the alarm will activate.)
• Opening the hood.
How to stop an activated alarm

The alarm will stop when a door is unlocked by pushing the UNLOCK button on the Intelligent Key, door handle request switch or using the mechanical key, or when the power switch is pushed in the ACC or ON position.

If the system does not operate as described above, have it checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

NISSAN VEHICLE IMMOBILIZER SYSTEM

The NISSAN Vehicle Immobilizer System will not allow the power switch to be placed in the READY to drive position without the use of the registered key.

If the power switch fails to place the vehicle into the READY to drive position using the registered key, it may be due to interference caused by another registered key, an automated toll road device or automated payment device on the key ring. Restart the EV system using the following procedure:

1. Leave the power switch in the ON position for approximately 5 seconds.
2. Place the power switch in the OFF position and wait approximately 10 seconds.
3. Repeat step 1 and 2 again.
4. Place the power switch in the READY to drive position while holding the device (which may have caused the interference) separate from the registered key.

If this procedure allows the power switch to be placed in the READY to drive mode, NISSAN recommends placing the registered key on a separate key ring to avoid interference from other devices.

FCC Notice:

For USA:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation.

NOTE:

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

For Canada:

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation.
Security Indicator Light

The security indicator light is located on the meter panel. It indicates the status of the NISSAN Vehicle Immobilizer System.

The light blinks after the power switch was in the ACC or OFF position. This function indicates the security systems equipped on the vehicle are operational.

If the NISSAN Vehicle Immobilizer System is malfunctioning, this light will remain on while the power switch is in the ON position.

If the light still remains on and/or the power switch cannot be placed in the READY to drive position, have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service as soon as possible. Please bring all registered keys that you have when visiting a NISSAN certified LEAF dealer for service.

WIPER AND WASHER SWITCH

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>In freezing temperatures the washer solution may freeze on the windshield and obscure your vision which may lead to an accident. Warm the windshield with the defroster before you wash the windshield.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Do not operate the washer continuously for more than 30 seconds.</td>
</tr>
<tr>
<td>• Do not operate the washer if the windshield-washer fluid reservoir is empty.</td>
</tr>
<tr>
<td>• Do not fill the windshield-washer fluid reservoir with windshield-washer fluid concentrates at full strength. Some methyl alcohol based windshield-washer fluid concentrates may permanently stain the grille if spilled while filling the windshield-washer fluid reservoir.</td>
</tr>
</tbody>
</table>
• Pre-mix windshield-washer fluid concentrates with water to the manufacturer's recommended levels before pouring the fluid into the windshield-washer fluid reservoir. Do not use the windshield-washer fluid reservoir to mix the windshield-washer fluid concentrate and water.

NOTE:
If the windshield wiper operation is interrupted by snow or ice, the wiper may stop moving to protect its motor. If this occurs, turn the wiper switch to the OFF position and remove the snow or ice that is on and around the wiper arms. In approximately 1 minute, turn the switch on again to operate the wiper.

WASHER OPERATION
To operate the washer, pull the lever toward the back of the vehicle until the desired amount of windshield-washer fluid is spread on the windshield. The wiper will automatically operate several times.

Drip Wipe
A brief period of time after using the washer the wiper will perform a one sweep operation automatically to clear any remaining windshield-washer fluid from the windshield.

The windshield wiper and washer operates when the power switch is in the ON position.

Push the lever down to operate the wiper at the following speed:

1. Intermittent — intermittent operation can be adjusted by turning the knob toward (Slower) or (Faster).
2. Low — continuous low speed operation
3. High — continuous high speed operation
4. MIST — one sweep operation of the wiper

2-40 Instruments and controls
REAR WIPER OPERATION

**WARNING**
In freezing temperatures the windshield-washer fluid may freeze on the rear window glass and obscure your vision. Warm the rear window with the defroster before you wash the rear window.

**CAUTION**
- Do not operate the washer continuously for more than 30 seconds.
- Do not operate the washer if the windshield-washer fluid reservoir is empty.
- Do not fill the windshield-washer fluid reservoir with windshield-washer fluid concentrates at full strength. Some methyl alcohol based windshield-washer fluid concentrates may permanently stain the grille if spilled while filling the windshield-washer fluid reservoir.
- Pre-mix windshield-washer fluid concentrates with water to the manufacturer's recommended levels before pouring the fluid into the windshield-washer fluid reservoir. Do not use the windshield-washer fluid reservoir to mix the windshield-washer fluid concentrate and water.

**NOTE:**
If the rear window wiper operation is interrupted by snow etc., the wiper may stop moving to protect its motor. If this occurs, turn the wiper switch to the OFF position and remove the snow etc. on and around the wiper arms. After about 1 minute, turn the switch ON again to operate the wiper.

The rear window wiper and washer operate when the power switch is in the ON position.

Turn the switch clockwise from the OFF position to operate the wiper.

1. Intermittent (INT) — intermittent operation (not adjustable)
2. Low (ON) — continuous low speed operation

Push the switch forward ③ to operate the washer. Then the wiper will also operate several times.
To defrost the rear window glass and outside mirrors, place the power switch in the ON position and push the switch ① on. The indicator light will illuminate. Push the switch again to turn the defroster off.

It will automatically turn off in approximately 15 minutes.

**CAUTION**

When cleaning the inner side of the rear window, be careful not to scratch or damage the rear window defroster.

Type A (if so equipped)

Type B (if so equipped)

The instrument brightness control switch can be operated when the power switch is in the ON position. When the switch is operated, the vehicle information display switches to the brightness adjustment mode.

Push the switch ① to display the setting menu of the brightness control on the vehicle information display.

Push the ① switch to move the bar to the + side. If the bar reaches the maximum brightness, a chime will sound. If the switch ① is pushed again when the brightness is at the maximum setting, the instrument lights turn off.
If the switch ① is pushed again, the instrument lights are turned on to the lowest brightness setting.

HEADLIGHT AND TURN SIGNAL SWITCH

HEADLIGHT SWITCH

Lighting

① Rotate the switch to the ♂♂♀ position, the front parking, tail, license plate, and instrument panel lights come on.
② Rotate the switch to the ♂♀♂ position, the headlights come on and all the other lights remain on.

Autolight system (if so equipped)

The autolight system allows the headlights to be set so they turn on and off automatically.

To set the autolight system:

1. Make sure the headlight switch is in the AUTO position ①.
2. Place the power switch in the ON position.
3. The autolight system automatically turns the headlights on and off.

To turn the autolight system off, turn the switch to the OFF, ♂♂♀ or ♂♀♂ position.
The autolight system can turn on the headlights automatically when it is dark and turn off the headlights when it is light.

For US models: The headlights will also be turned on automatically at twilight or in rainy weather (when the windshield wiper is operated continuously).

If the power switch is placed in the OFF position and one of the doors is opened and this condition continues, the headlights remain on for 45 seconds.

**Automatic headlights off delay:**
You can keep the headlights on for up to 180 seconds after you push the power switch to OFF and open any door then close all the doors.

You can adjust the period of the automatic headlights off delay from 0 seconds (OFF) to 180 seconds. The factory default setting is 45 seconds.

For automatic headlights off delay setting, refer to the LEAF Navigation System Owner’s Manual (models with navigation system).

Be sure not to put anything on top of the photo sensor ① located on the top of the instrument panel. The photo sensor controls the autolight; if it is covered, the photo sensor reacts as if it is dark and the headlights will illuminate.

Headlight beam select

① To select the low beam, have the lever in the neutral position as shown and rotate the switch to the desired position. For additional information, refer to “Headlight switch” in this section.

② To select the high beam, push the lever forward while the switch is in the ① position. The high beams will come on and the high beam indicator (blue) ③ will illuminate. Pull it back to return to the low beam.
Pulling the lever toward you will flash the headlight high beam even when the headlight switch is in the OFF position.

Battery saver system
- When the headlight switch is in the \[\text{on}\] or \[\text{off}\] position while the power switch is in the ON position, the lights will automatically turn off 45 seconds after the power switch has been placed in the OFF position.
- When the headlight switch remains in the \[\text{on}\] or \[\text{off}\] position after the lights automatically turn off, the lights will turn on when the power switch is placed in the ON position.

**CAUTION**
- When you turn on the headlight switch again after the lights automatically turn off, the lights will not turn off automatically. Be sure to turn the light switch to the OFF position when you leave the vehicle for extended periods of time, otherwise the battery will be discharged.
- Never leave the light switch on when the power switch is in the OFF, ACC or ON position for extended periods of time even if the headlights turn off automatically.

Daytime running light system (for Canada)
The daytime running lights automatically illuminate when the power switch is in the READY to drive position with the parking brake released. The daytime running lights operate with the headlight switch in the OFF position. Turn headlight switch to the \[\text{on}\] position for full illumination when driving at night.

If the parking brake is applied before the power switch is in the READY to drive position, daytime running lights do not operate. The daytime running lights illuminate once the parking brake is released. The daytime running lights will remain on until the power switch is pushed to the OFF position.

**TURN SIGNAL SWITCH**

**Turn signal**
1. Move the lever up or down until it latches to signal the turning direction. When the turn is completed, the turn signal cancels automatically.

**Lane change signal**
2. Move the lever up or down until the turn signal begins to flash, but the lever does not latch, to signal a lane change. Hold the lever until the lane change is completed.
Move the lever up or down until the turn signal begins to flash, but the lever does not latch, and release the lever. The turn signal will automatically flash three times.

Choose the appropriate method to signal a lane change based on road and traffic conditions.

**FOG LIGHT SWITCH (IF SO EQUIPPED)**

To turn the fog lights on, rotate the headlight switch to the position, then rotate the switch to the position. To turn them off, rotate the switch to the OFF position.

The headlights must be on for the fog lights to operate.

**HEATED STEERING WHEEL SWITCH (IF SO EQUIPPED)**

The heated steering wheel system is designed to operate only when the surface temperature of the steering wheel is below approximately 68°F (20°C).

Push the heated steering wheel switch to warm the steering wheel when the power switch is in the ON position. The indicator light on the switch will illuminate.
If the surface temperature of the steering wheel is below approximately 68°F (20°C), the system will heat the steering wheel and cycle off and on to maintain a temperature above 68°F (20°C). The indicator light will remain on as long as the system is on.

Push the switch again to turn the heated steering wheel system off manually. The indicator light turns off.

**NOTE:**

- If the surface temperature of the steering wheel is above 68°F (20°C) when the switch is turned on, the system will not heat the steering wheel. This is not a malfunction.
- If the outside temperature is low (approximately 50°F (10°C) or less) and the Climate Control Timer or Remote Climate Control are used, the steering wheel heater will automatically operate in the following conditions.
  - When using the Climate Control Timer: Operates from approximately 15 minutes before the set departure time until the set departure time.
  - When using Remote Climate Control: Operates 15 minutes after Remote Climate Control starts.
- The heated steering wheel consumes less power than the heater and can be used to either help extend vehicle range by reducing heater use or to maximize comfort by supplementing the heater.

To sound the horn, push the center pad area of the steering wheel.

**WARNING**

Do not disassemble the horn. Doing so could affect proper operation of the supplemental front air bag system. Tampering with the supplemental front air bag system may result in serious personal injury.
To activate the ECO mode, push the ECO switch on the right side of the steering wheel. The “ECO indicator” on the instrument cluster will illuminate.

To deactivate the ECO mode, push the ECO switch again. The “ECO indicator” on the instrument cluster will go out.

For additional information, refer to “Electric shift control system” in the “Starting and driving” section of this manual.

The front seats and the rear outboard seats (if so equipped) can be warmed by built-in heaters. The switches, located on the center console and at the side of the front passenger seatback, can be operated independently of each other.

1. Place the power switch in the ON position.
2. Push the LO or HI position of the switch, as desired, depending on the temperature. The indicator light in the switch will illuminate.
3. To turn off the heater, return the switch to the level position. Make sure the indicator light goes off.
The heater is controlled by a thermostat, automatically turning the heater on and off. The indicator light will remain on as long as the switch is on.

When the vehicle’s interior is warmed, or before you leave the vehicle, be sure to turn the switch off.

**NOTE:**
The heated seats consume less power than the heater and can be used to either help extend vehicle range by reducing heater use or to maximize comfort by supplementing the heater.

### **WARNING**
Do not use or allow occupants to use the seat heater if you or the occupants cannot monitor elevated seat temperatures or have an inability to feel pain in those body parts in contact with the seat. Use of the seat heater by such people could result in serious injury.

### **CAUTION**
- Do not use the seat heater for extended periods or when no one is using the seat.
- Do not put anything on the seat which insulates heat, such as a blanket, cushion, seat cover, etc. Otherwise, the seat may become overheated.
- Do not place anything hard or heavy on the seat or pierce it with a pin or similar object. This may result in damage to the heater.
- Any liquid spilled on the heated seat should be removed immediately with a dry cloth.
- When cleaning the seat, never use gasoline, thinner, or any similar materials.
- If any malfunctions are found or the heated seat does not operate, turn the switch off and have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

---

**VEHICLE DYNAMIC CONTROL (VDC) OFF SWITCH**

The vehicle should be driven with the Vehicle Dynamic Control (VDC) system on for most driving conditions.

If the vehicle is stuck in mud or snow, the VDC system reduces the traction motor output to reduce wheel spin. The traction motor speed will be reduced even if the accelerator is depressed to the floor. If maximum traction motor power is needed to free a stuck vehicle, turn the VDC system off.

To turn off the VDC system, push the VDC OFF switch. The \( \text{\textsuperscript{\text{\textcircled{}}}} \) indicator will illuminate.

---

*Instruments and controls 2-49*
Push the VDC OFF switch again to turn on the VDC system, or the VDC is automatically turned back on when the power switch is placed in the OFF position and then placed back in the READY to drive position. For additional information, refer to “Vehicle Dynamic Control (VDC) system” in the “Starting and driving” section of this manual.

To open the charge port lid, push the charge port lid switch. For additional information, refer to “Charge port lid” in the “Pre-driving checks and adjustments” section of this manual.

To lock or unlock the charge connector, push the charge connector lock switch. For additional information, refer to “Charge connector lock switch” in the “Charging” section of this manual.
To turn off the charge timer, push the charge timer OFF switch. For additional information, refer to “Charging timer” in the “Charging” section of this manual.

The power outlet is located in the instrument panel.

**CAUTION**
- The outlet and plug may be hot during or immediately after use.
- Do not use with accessories that exceed a 12-volt, 120W (10A) power draw.
- Do not use double adapters or more than one electrical accessory.

- Use the power outlet with the power switch in the ON or READY to drive position to avoid discharging the 12-volt battery.
- Avoid using the power outlet when the air conditioner, headlights or rear window defroster are on.
- This power outlet is not designed for use with a cigarette lighter unit.
- Push the plug in as far as it will go. If good contact is not made, the plug may overheat or the internal temperature fuse may open.
- Before inserting or disconnecting a plug, make sure that the electrical accessory being used is turned OFF.
- When not in use, be sure to close the cap. Do not allow water to contact the outlet.
CUP HOLDERS

- Avoid abrupt starting and braking when the cup holder is being used to prevent spilling the drink. If the liquid is hot, it can scald you or your passenger.
- Use only soft cups in the cup holder. Hard objects can injure you in an accident.

STORAGE TRAYS

- Do not use the bottle holder for any other objects that could be thrown about in the vehicle and possibly injure people during sudden braking or an accident.
- Do not use the bottle holder for open liquid containers.

- Do not place sharp objects in the tray(s) to help prevent injury in an accident or sudden stop.
SEATBACK POCKET (IF SO EQUIPPED)

The seatback pocket is located on the back of the passenger’s seat. The pocket can be used to store maps.

WARNING

To ensure proper operation of the passenger’s NISSAN Advanced Air Bag System, please observe the following items:

• Do not allow a passenger in the rear seat to push or pull on the seatback pocket or head restraint.
• Do not place heavy loads heavier than 2.2 lbs. (1 kg) on the seatback, head restraint, or in the seatback pocket.
OVERHEAD SUNGASSES STORAGE
To open the sunglasses holder, push and release. Only store one pair of sunglasses in the holder.

WARNING
Keep the sunglasses holder closed while driving to avoid obstructing the driver's view and to help prevent an accident.

CAUTION
• Do not use for anything other than sunglasses.
• Do not leave sunglasses in the sunglasses holder while parking in direct sunlight. The heat may damage the sunglasses.

GLOVE BOX
To open the glove box, pull the handle. To close, push the lid in until it latches.

WARNING
Keep the glove box lid closed while driving to prevent injury in case of an accident or a sudden stop.
CONSOLE BOX

To open the console box, pull up the lever A and pull up the lid. To close, push the lid down until it is latched.

TONNEAU COVER (IF SO EQUIPPED)

**WARNING**
- Never put anything on the tonneau cover, no matter how small. Any object on it could cause an injury in an accident or sudden stop.

- Do not leave the tonneau cover in the vehicle with it disengaged from the holder.
- Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.
- Properly secure cargo and do not allow it to contact the top tether strap when it is attached to the top tether anchor. Cargo that is not properly secured or cargo that contacts the top tether strap may damage the top tether strap during a collision. If the cargo cover contacts the top tether strap when it is attached to the top tether anchor, remove the cargo cover from the vehicle or secure it on the cargo floor below its attachment location. If the cargo cover is not removed, it may damage the top tether strap during a collision. Your child could be seriously injured or killed in a collision if the child restraint top tether strap is damaged.

- Properly secure cargo and do not allow it to contact the top tether strap when it is attached to the top tether anchor. Cargo that is not properly secured or cargo that contacts the top tether strap may damage the top tether strap during a collision. If the cargo cover contacts the top tether strap when it is attached to the top tether anchor, remove the cargo cover from the vehicle or secure it on the cargo floor below its attachment location. If the cargo cover is not removed, it may damage the top tether strap during a collision. Your child could be seriously injured or killed in a collision if the child restraint top tether strap is damaged.

The tonneau cover keeps the luggage compartment contents hidden from the outside.

To remove the tonneau cover:
1. Remove the straps from the rear hatch.
2. Pull up the tonneau cover.
3. Remove the tonneau cover holders from the rear pillar.

Instruments and controls 2-55
4. Slide down the tonneau cover along the rear seat back.
5. Remove the tonneau cover by pulling either the left or right side backward away from the pillar.

STOWING GOLF BAGS

Normally, two standard golf bags can be stowed in the cargo area. Insert the top of the golf bag into the right side of the cargo area ① then rotate the bag backward ②. Insert the top of the second golf bag into right side of the cargo area ③ and stow the bottom of golf bag forward all the way ④.

In some cases, you may not be able to stow two golf bags in your vehicle, depending on their sizes or types.

POWER WINDOWS

**WARNING**
- Make sure that all passengers have their hands, etc. inside the vehicle while it is in motion and before closing the windows. Use the window lock switch to prevent unexpected use of the power windows.
- To help avoid risk of injury or death through unintended operation of the vehicle or its systems, including entrapment in windows or inadvertent door lock activation, do not leave children, people who require the assistance of others, or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

The power windows operate when the power switch is in the ON position, or for about 45 seconds after the power switch is placed in the OFF position. If the driver’s or front passenger’s door is opened during this period of about 45 seconds, power to the windows is canceled.
Main power window switch (driver’s side)

1. Driver side window
2. Front passenger side window
3. Rear left passenger side window
4. Rear right passenger side window
5. Window lock button

To open or close a window, push down A or pull up B the corresponding switch and hold it. The main switches, on the driver’s side, will open or close all the windows.

Locking passengers’ windows

When the lock button C is pushed in, only the driver side window can be opened or closed. Push it in again to cancel.

Passenger side power window switch

The passenger’s side power window switch will open or close only the corresponding window. To open or close the window, push down or pull up the switch and hold it.
Automatic operation
The automatic operation is available for the switch that has an "A" mark on its surface.

To fully open or close the window, completely push down or pull up the switch and release it; the switch need not be held. The window will automatically open or close all the way. To stop the window, just push or lift the switch in the opposite direction.

A light push or pull on the switch will cause the window to open or close until the switch is released.

Auto-reverse function

**WARNING**
There are some small distances immediately before the closed position which cannot be detected. Make sure that all passengers have their hands, etc., inside the vehicle before closing the window.

If the control unit detects something caught in the window as it is closing, the window will be immediately lowered.

The auto reverse function can be activated when the window is closed by automatic operation when the power switch is in the ON position or for 45 seconds after the power switch is placed in the OFF position.

If the windows do not close automatically

If the power window automatic function (closing only) does not operate properly, perform the following procedure to initialize the power window system.

1. Place the power switch in the ON position.
2. Close the door.
3. Open the window completely by operating the power window switch.
4. Pull the power window switch and hold it to close the window, and then hold the switch more than 3 seconds after the window is closed completely.
5. Release the power window switch. Operate the window by the automatic function to confirm the initialization is complete.

If the power window automatic function does not operate properly after performing the procedure above, have your vehicle serviced. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
INTERIOR LIGHTS

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use for extended periods of time with the power switch in the OFF position. This could result in a discharged 12-volt battery.</td>
</tr>
</tbody>
</table>

MAP LIGHTS
Press the button to turn the map lights on. To turn them off, press the button again.

ROOM LIGHT
The room light switch has three positions: ON, DOOR and OFF.

ON position
When the switch is in the ON position ①, the ceiling light will illuminate.
DOOR position
When the switch is in the DOOR position (2), the ceiling light will illuminate under the following conditions:

• the power switch is placed in the LOCK position – remains on for about 15 seconds.
• doors are unlocked by pushing the UNLOCK button or the request switch, with the power switch in the LOCK position – remains on for about 15 seconds.
• any door is opened and then closed with the power switch in the LOCK position – remains on for about 15 seconds.
• any door is opened while the power switch in the ACC or ON position – remains on while the door is opened. When the door is closed, the light turns off.

The light will automatically turn off after 10 minutes when the light remains illuminated to prevent the battery from becoming discharged.

OFF position
When the switch is in the OFF position (3), the ceiling light will not illuminate, regardless of the condition.

CARGO LIGHT
The light illuminates when the rear hatch is opened. When the rear hatch is closed, the light goes off. For additional information, refer to “Exterior and interior lights” in the “Maintenance and do-it-yourself” section of this manual.

HOMELINK® UNIVERSAL TRANSCEIVER (IF SO EQUIPPED)
The HomeLink® Universal Transceiver provides a convenient way to consolidate the functions of up to three individual hand-held transmitters into one built-in device.

HomeLink® Universal Transceiver:
• Will operate most Radio Frequency (RF) devices such as garage doors, gates, home and office lighting, entry door locks and security systems.
• Is powered by the vehicle’s 12-volt battery. No separate batteries are required. If the vehicle’s 12-volt battery is discharged or is disconnected, HomeLink® will retain all programming.

Once the HomeLink® Universal Transceiver is programmed, retain the original transmitter for future programming procedures (for example, new vehicle purchases). Upon sale of the vehicle, the programmed HomeLink® Universal Transceiver buttons should be erased for security purposes. For additional information, refer to “Programming HomeLink®” in this section.
WARNING

• Do not use the HomeLink® Universal Transceiver with any garage door opener that lacks safety stop and reverse features as required by federal safety standards. (These standards became effective for opener models manufactured after April 1, 1982.) A garage door opener that cannot detect an object in the path of a closing garage door and then automatically stop and reverse, does not meet current federal safety standards. Using a garage door opener without these features increases the risk of serious injury or death.

• During the programming procedure, your garage door or security gate will open or close (if the transmitter is within range). Make sure that people or objects are clear of the garage door, gate, etc. that you are programming.

• Place the power switch in the ACC or ON position while programming the HomeLink® Universal Transceiver.

PROGRAMMING HOMELINK®

If you have any questions or are having difficulty programming your HomeLink® buttons, refer to the HomeLink® web site at: www.homelink.com or call 1-800-355-3515.

NOTE:
Place the power switch in the ACC position when programming HomeLink®. It is also recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink® for quicker programming and accurate transmission of the radio-frequency.

1. Position the end of your hand-held transmitter 1–3 inches (2–8 cm) away from the HomeLink® surface, keeping the HomeLink® indicator light in view.

2. Using both hands, simultaneously press and hold the desired HomeLink® button and hand held transmitter button. DO NOT release until the HomeLink® indicator light flashes slowly and then rapidly. When the indicator light flashes rapidly, both buttons may be released. (The rapid flashing indicates successful programming.)

NOTE:
Some devices may require you to replace Step 2 with the cycling procedure noted in the “Programming HomeLink® for Canadian customers and gate openers” section.
3. Press and hold the programmed HomeLink® button and observe the indicator light.
   • If the indicator light is solid/continuous, programming is complete and your device should activate when the HomeLink® button is pressed and released.
   • If the indicator light blinks rapidly for two seconds and then turns to a solid/continuous light, continue with Steps 4-6 for a rolling code device. A second person may make the following steps easier. Please use a ladder or other device. Do not stand on your vehicle to perform the next steps.

4. At the receiver located on the garage door opener motor in the garage, locate the “learn” or “smart” button (the name and color of the button may vary by manufacturer but it is usually located near where the hanging antenna wire is attached to the unit). If there is difficulty locating the button, reference the garage door opener’s manual.

5. Press and release the “learn” or “smart” button.

6. Return to the vehicle and firmly press and hold the trained HomeLink® button for two seconds and release. Repeat the “press/hold/release” sequence up to three times to complete the training process. HomeLink® should now activate your rolling code equipped device.

7. If you have any questions or are having difficulty programming your HomeLink® buttons, refer to the HomeLink® web site at: www.homelink.com or call 1-800-355-3515.

PROGRAMMING HOMELINK® FOR CANADIAN CUSTOMERS AND GATE OPENERS

Canadian radio-frequency laws require transmitter signals to “time-out” (or quit) after several seconds of transmission – which may not be long enough for HomeLink® to pick up the signal during training. Similar to this Canadian law, some U.S. gate operators are designed to “time-out” in the same manner.

If you live in Canada or you are having difficulties training a gate operator or garage door opener by using the “Training” procedures, replace “Programming HomeLink®” Step 2 with the following:

**NOTE:**
When programming a garage door opener, etc., unplug the device during the “cycling” process to prevent possible damage to the garage door opener components.

1. Refer to “Programming HomeLink®” step 1 in this section.

2. Using both hands, simultaneously press and hold the desired HomeLink® button and the hand-held transmitter button. During training, your hand-held transmitter may automatically
stop transmitting. Continue to press and hold the desired HomeLink® button while you press and re-press ("cycle") your hand-held transmitter every two seconds until the frequency signal has been learned. The HomeLink® indicator light will flash slowly and then rapidly after several seconds upon successful training. DO NOT release until the HomeLink® indicator light flashes slowly and then rapidly. When the indicator light flashes rapidly, both buttons may be released. The rapid flashing indicates successful training.

Proceed with “Programming HomeLink®” step 3 to complete.

If the device was unplugged during the programming procedure, remember to plug it back in when programming is completed.

OPERATING THE HOMELINK® UNIVERSAL TRANSCEIVER

The HomeLink® Universal Transceiver, after it is programmed, can be used to activate the programmed device. To operate, simply press and release the appropriate programmed HomeLink® Universal Transceiver button. The amber indicator light will illuminate while the signal is being transmitted.

For convenience, the hand-held transmitter of the device may also be used at any time.

PROGRAMMING TROUBLE-DIAGNOSIS

If HomeLink® does not quickly learn the hand-held transmitter information, perform the following steps.

• Replace the hand-held transmitter batteries with new batteries.
• Position the hand-held transmitter with its battery area facing away from the HomeLink® surface.
• Push and hold both the HomeLink® and hand-held transmitter buttons without interruption.
• Position the hand-held transmitter 1 to 3 inches (2 to 8 cm) away from the HomeLink® surface. Hold the transmitter in that position for up to 15 seconds. If HomeLink® is not programmed within that time, try holding the transmitter in another position while keeping the indicator light in view at all times.

If you continue to have programming difficulties, please contact the NISSAN Consumer Affairs Department. The phone numbers are located in the Foreword of this Owner's Manual.

CLEARING THE PROGRAMMED INFORMATION

The following procedure clears the programmed information from both buttons. Individual buttons cannot be cleared. However, individual buttons can be reprogrammed. For additional information, refer to “Reprogramming a single HomeLink® button” in this section.

To clear all programming:

1. Press and hold the two outer HomeLink® buttons until the indicator light begins to flash in approximately 10 seconds. Do not hold for longer than 20 seconds.
2. Release both buttons.

HomeLink® is now in the programming mode and can be programmed at any time beginning with “Programming HomeLink®” - Step 1.
REPROGRAMMING A SINGLE HOMELINK® BUTTON

To reprogram a HomeLink® Universal Transceiver button, complete the following:

1. Press and hold the desired HomeLink® button. **DO NOT** release the button.
2. The indicator light will begin to flash after 20 seconds. Without releasing the HomeLink® button, proceed with “Programming HomeLink®” - Step 1.

For questions or comments, contact HomeLink® at: www.homelink.com or 1–800–355–3515.

The HomeLink® Universal Transceiver button has now been reprogrammed. The new device can be activated by pushing the HomeLink® button that was just programmed. This procedure will not affect any other programmed HomeLink® buttons.

IF YOUR VEHICLE IS STOLEN

If your vehicle is stolen, you should change the codes of any non-rolling code device that has been programmed into HomeLink®. Consult the Owner’s Manual of each device or call the manufacturer or dealer of those devices for additional information.

When your vehicle is recovered, you will need to reprogram the HomeLink® Universal Transceiver with your new transmitter information.

FCC notice:

For USA:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

For Canada:

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

NOTE:

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

KEYS
A key number plate is supplied with your keys. Record the key number and keep it in a safe place (such as your wallet), not in the vehicle. If you lose your keys, it is recommended that you visit a NISSAN certified LEAF dealer for duplicates by using the key number. NISSAN does not record any key numbers so it is very important to keep track of your key number plate.

A key number is only necessary when you have lost all keys and do not have one to duplicate from. If you still have a key, it can be duplicated without knowing the key number.

NOTE:
Do not leave the keys inside the vehicle when leaving the vehicle.

NISSAN INTELLIGENT KEY®
1. Intelligent Key (two sets)
2. Mechanical key (inside Intelligent Key)
3. Key number plate (one plate)

Your vehicle can only be driven with the Intelligent Keys which are registered to your vehicle’s Intelligent Key system components and NISSAN Vehicle Immobilizer System components.

As many as four Intelligent Keys can be registered and used with one vehicle. The new keys must be registered by a NISSAN certified LEAF dealer prior to use with the Intelligent Key system and NISSAN Vehicle Immobilizer System of your vehicle. Since the registration process requires erasing all memory in the Intelligent Key components when registering new keys, be sure to take all Intelligent Keys that you have to the NISSAN certified LEAF dealer.

CAUTION
Be sure to carry the Intelligent Key with you when driving. The Intelligent Key is a precision device with a built-in transmitter. To avoid damaging it, please note the following.
• The Intelligent Key is water resistant; however, wetting may damage the Intelligent Key. If the Intelligent Key gets wet, immediately wipe until it is completely dry.
• Do not bend, drop or strike it against another object.
• If the outside temperature is below 14°F (-10°C) degrees, the battery of the Intelligent Key may not function properly.
• Do not place the Intelligent Key for an extended period in a place where temperatures exceed 140°F (60°C).
• Do not change or modify the Intelligent Key.
• Do not use a magnet key holder.
• Do not place the Intelligent Key near an electric appliance such as a television set, personal computer or cellular phone.
• Do not allow the Intelligent Key to come into contact with water or salt water, and do not wash it in a washing machine. This could affect the system function.

If an Intelligent Key is lost or stolen, NISSAN recommends erasing the ID code of that Intelligent Key. This will prevent the Intelligent Key from unauthorized use to unlock the vehicle. For information regarding the erasing procedure, it is recommended that you visit a NISSAN certified LEAF dealer.

Mechanical key
To remove the mechanical key, release the lock knob at the back of the Intelligent Key.

To install the mechanical key, firmly insert it into the Intelligent Key until the lock knob returns to the lock position.

Use the mechanical key to lock or unlock the doors. For additional information, refer to “Doors” in this section.

CAUTION
Always carry the mechanical key installed in the Intelligent Key.

NISSAN VEHICLE IMMOBILIZER SYSTEM KEYS
You can only drive your vehicle using the master keys which are registered to the NISSAN Vehicle Immobilizer System components in your vehicle. These keys have a transponder chip in the key head.

The master key can be used for all the locks.

To protect belongings when you leave a key with someone, give them the Intelligent Key only, not the mechanical key.

Never leave these keys in the vehicle.

Additional or replacement keys:
If you still have a key, the key number is not necessary when you need extra NISSAN Vehicle Immobilizer System keys. A NISSAN certified LEAF dealer can duplicate your existing key. As many as four NISSAN Vehicle Immobilizer System keys can be used with one vehicle. You should bring all NISSAN Vehicle Immobilizer System keys that you have to the NISSAN certified

Pre-driving checks and adjustments  3-3
LEAF dealer for registration. This is because the registration process will erase the memory of all key codes previously registered into the NISSAN Vehicle Immobilizer System. After the registration process, these components will only recognize keys coded into the NISSAN Vehicle Immobilizer System during registration. Any key that is not given to the dealer at the time of registration will no longer be able to start your vehicle.

**CAUTION**
Do not allow the immobilizer system key, which contains an electrical transponder, to come into contact with water or salt water. This could affect system function.

**WARNING**
- Always have the doors locked while driving. Along with the use of seat belts, this provides greater safety in the event of an accident by helping to prevent persons from being thrown from the vehicle. This also helps keep children and others from unintentionally opening the doors, and will help keep out intruders.
- Before opening any door, always look for and avoid oncoming traffic.
- To help avoid risk of injury or death through unintended operation of the vehicle and or its systems, including entrapment in windows or inadvertent door lock activation, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

When the doors are locked using one of the following methods, the doors cannot be opened using the inside or outside door handles. The doors must be unlocked to open the doors.

**DOORS**

![Diagram of door locking mechanism]

**LOCKING WITH MECHANICAL KEY (DRIVER’S SIDE ONLY)**
The power door lock system allows you to lock or unlock all doors simultaneously using the mechanical key.
- Turning the driver’s door key cylinder towards the front of the vehicle ① will lock all doors and the rear hatch.

3-4  Pre-driving checks and adjustments
• Turning the driver’s door key cylinder, once towards the rear of the vehicle ②, will unlock the driver’s door. After returning the key to the neutral position, turning it towards the rear again within five seconds will unlock all doors and the rear hatch.
• For models equipped with navigation, you can switch the lock system to the mode that allows you to open all the doors when the key is turned once. For additional information, refer to the LEAF Navigation System Owner’s Manual.

LOCKING WITH INSIDE LOCK KNOB
To lock the door without the key, move the inside lock knob to the lock position ① then close the door.
To unlock, move the inside lock knob to the unlock position ②.

When locking the door without a key, be sure not to leave the key inside the vehicle.

LOCKING WITH POWER DOOR LOCK SWITCH
Operating the power door lock switch will lock or unlock all the doors. The switches are located on the driver’s and front passenger’s door armrests.
To lock the doors, push the power door lock switch to the lock position ① with the driver’s or front passenger’s door open, then close the door.
When locking the door this way, be sure not to leave the key inside the vehicle.
To unlock the doors, push the power door lock switch to the unlock position ②.

Pre-driving checks and adjustments  3-5
Lockout protection
When the power door lock switch is moved to the lock position while any door is open, all doors will unlock automatically and a chime will sound after the door is closed.
This function help to prevent the Intelligent Key from being accidentally locked inside the vehicle.

AUTOMATIC DOOR LOCKS
• All doors lock automatically when the vehicle speed reaches 15 mph (24 km/h).
• All doors unlock automatically when the power switch is placed in the OFF position.

CHILD SAFETY REAR DOOR LOCK
Child safety rear door locks help prevent the rear doors from being opened accidentally, especially when small children are in the vehicle.
When the levers are in the lock position ①, the rear doors can be opened only from the outside.
To disengage, move the levers to the unlock position ②.

NISSAN INTELLIGENT KEY® SYSTEM

WARNING
• Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
• The Intelligent Key transmits radio waves when the buttons are pressed. The FAA advises that the radio waves may affect aircraft navigation and communication systems. Do not operate the Intelligent Key while on an airplane. Make sure the buttons are not operated unintentionally when the unit is stored during a flight.

The Intelligent Key system can operate all the door and the rear hatch locks by using the remote control function or pushing the request switch on the vehicle without taking the key out from a pocket or purse. The operating environment and/or conditions may affect the Intelligent Key system operation.
Be sure to read the following items before using the Intelligent Key system.
In such cases, correct the operating conditions before using the Intelligent Key function or use the mechanical key.

Although the life of the battery varies depending on the operating conditions, the battery’s life is approximately two years. If the battery is discharged, replace it with a new one.

When the Intelligent Key battery is almost discharged, firmly apply the foot brake and touch the power switch with the Intelligent Key. Then push the power switch while depressing the brake pedal within 10 seconds after the chime sound.

Since the Intelligent Key is continuously receiving radio waves, if the key is left near equipment that transmits strong radio waves, such as signals from a TV or personal computer, the battery life may become shorter.

For additional information, refer to “NISSAN Intelligent Key® battery replacement” in the “Maintenance and do-it-yourself” section of this manual.

Pay special attention that the vehicle battery is not completely discharged.

As many as four Intelligent Keys can be registered and used with one vehicle. For information about the purchase and use of additional Intelligent Keys, it is recommended that you visit a NISSAN certified LEAF dealer.

CAUTION

• Do not allow the Intelligent Key, which contains electrical components, to come into contact with water or salt water. This could affect the functioning of the system.

• Do not drop the Intelligent Key.

• Do not strike the Intelligent Key sharply against another object.

• Do not change or modify the Intelligent Key.

• The Intelligent Key may be damaged if it gets wet. If the Intelligent Key gets wet, immediately wipe until it is completely dry.

• If the outside temperature is below 14°F (~10°C), the battery of the Intelligent Key may not function properly.

• Do not place the Intelligent Key for an extended period in an area where temperatures exceed 140°F (60°C).

• Do not attach the Intelligent Key to a key holder that contains a magnet.

• Do not place the Intelligent Key near equipment that produces a magnetic field, such as a TV, audio equipment, personal computer or cellular phone.
If an Intelligent Key is lost or stolen, NISSAN recommends erasing the ID code of that Intelligent Key from the vehicle. This may prevent the unauthorized use of the Intelligent Key to operate the vehicle. For additional information, it is recommended that you visit a NISSAN certified LEAF dealer.

The Intelligent Key function can be disabled. For additional information, it is recommended that you visit a NISSAN certified LEAF dealer.

NISSAN INTELLIGENT KEY® OPERATING RANGE OF THE DOOR LOCK/UNLOCK FUNCTION

The Intelligent Key functions can only be used when the Intelligent Key is within the specified operating range from the request switch ①.

When the Intelligent Key battery is discharged or strong radio waves are present near the operating location, the Intelligent Key system’s operating range becomes narrower, and the Intelligent Key may not function properly.

The operating range is within 31.50 in (80 cm) from each request switch ①.

If the Intelligent Key is too close to the door glass, handle or rear bumper, the request switches may not function.

When the Intelligent Key is within the operating range, it is possible for anyone who does not carry the Intelligent Key to push the request switch to lock/unlock the doors including the rear hatch.
DOOR LOCKS/UNLOCKS

PRECAUTION

- Do not push the door handle request switch with the Intelligent Key held in your hand as illustrated. The close distance to the door handle will cause the Intelligent Key system to have difficulty recognizing that the Intelligent Key is outside the vehicle.
- After locking with the door handle request switch, verify the doors are securely locked by testing them.
- To prevent the Intelligent Key from being left inside the vehicle, make sure you carry the key with you and then lock the doors.

- Do not pull the door handle before pushing the door handle request switch. The door will be unlocked but will not open. Release the door handle once and pull it again to open the door.
You can lock or unlock the doors without taking the key out from your pocket or bag.

When you carry the Intelligent Key with you, you can lock or unlock all doors by pushing the door handle request switch (driver’s or front passenger’s) \( A \) or the rear hatch request switch \( B \) within the range of operation.

When you lock or unlock the doors or the rear hatch, the hazard indicator will flash and the horn (or the outside chime) will sound as a confirmation. For additional information, refer to “Hazard warning flasher switch” in the “In case of emergency” section of this manual and “Horn” in the “Instruments and controls” section of this manual.

Locking doors

1. Push the power switch into the OFF position and make sure you carry the Intelligent Key with you.
2. Close all the doors and the rear hatch.
3. Push the door handle request switch (driver’s or front passenger’s) \( A \) or the rear hatch request switch \( B \) while carrying the Intelligent Key with you.*1
4. All the doors and the rear hatch will lock.
5. The hazard indicator flashes twice and the outside chime sounds twice.

*1: Doors will not lock by pushing the door handle request switch when the Intelligent Key is left inside the vehicle. A chime sounds to alert that the Intelligent Key is in the vehicle. However, when an Intelligent Key is inside the vehicle, doors can be locked with another registered Intelligent Key.

Unlocking doors

1. Push the door handle request switch \( A \) or the rear hatch request switch \( B \) once while carrying the Intelligent Key with you.
2. The hazard indicator flashes once and the outside chime sounds once. The corresponding door or the rear hatch will unlock.
3. Push the door handle request or the rear hatch request switch again within one minute.
4. The hazard indicator flashes once and the outside chime sounds once again. All the doors and the rear hatch will unlock.
All doors will be locked automatically unless one of the following operations is performed within one minute after pushing the request switch while the doors are locked.

• Opening any door.
• Pushing the power switch.

During this one minute time period, if the UN-LOCK button on the Intelligent Key is pressed, all doors will be locked automatically after another one minute.

Opening rear hatch
1. Carry the Intelligent Key.
2. Push the rear hatch opener switch (C).
3. The rear hatch will unlock and open.

12-VOLT BATTERY SAVER SYSTEM
When all the following conditions are met for a period of time, the battery saver system will cut off the power supply to prevent 12-volt battery discharge.

• The power switch is in the ACC or ON position,
• All doors are closed, and
• The vehicle is in the P (Park) position.

WARNING SIGNALS
To help prevent the vehicle from moving unexpectedly by erroneous operation of the Intelligent Key listed on the following chart or to help prevent the vehicle from being stolen, chime or beep sounds inside and outside the vehicle and a warning displays in the vehicle information display.

When a chime or beep sounds or the warning displays, be sure to check the vehicle and Intelligent Key.

For additional information, refer to the “Troubleshooting guide” in this section and “Vehicle information display” in the “Instruments and controls” section of this manual.
TROUBLESHOOTING GUIDE

Verify the location of all Intelligent Keys that are programmed for the vehicle. If another Intelligent Key is in range or inside the vehicle, the vehicle system may respond differently than expected.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Action to take</th>
</tr>
</thead>
<tbody>
<tr>
<td>When opening the driver’s door to get out of the vehicle</td>
<td>The inside warning chime sounds continuously. The power switch is pushed to the OFF position while the driver’s door is open. The power switch is in the ACC position.</td>
<td>Close the driver’s door. Push the power switch to the OFF position then close the driver’s door.</td>
</tr>
<tr>
<td>When closing the door after getting out of the vehicle</td>
<td>The Key is not detected warning appears on the display, the outside chime sounds three times and the inside warning chime sounds for a few seconds. The power switch is in the ACC or ON position. The power switch is in the ACC or OFF position, the electric shift control system has malfunctioned and the vehicle cannot be placed in the P (Park) position when the parking brake is not applied.</td>
<td>Push the power switch to the OFF position. Make sure the parking brake is applied.</td>
</tr>
<tr>
<td>When closing the door with the inside lock knob turned to LOCK</td>
<td>The outside chime sounds for a few seconds and all the doors unlock. The Intelligent Key is inside the vehicle or cargo area.</td>
<td>Carry the Intelligent Key with you.</td>
</tr>
<tr>

HOW TO USE REMOTE KEYLESS ENTRY FUNCTION

WARNING
• Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
• The Intelligent Key transmits radio waves when the buttons are pressed. The FAA advises that the radio waves may affect aircraft navigation and communication systems. Do not operate the Intelligent Key while on an airplane. Make sure the buttons are not operated unintentionally when the unit is stored during a flight.

CAUTION
• Do not allow the Intelligent Key, which contains electrical components, to come into contact with water or salt water. This could affect the system function.
• Do not drop the Intelligent Key.
• Do not strike the Intelligent Key sharply against another object.
• Do not change or modify the Intelligent Key.
• Wetting may damage the Intelligent Key. If the Intelligent Key gets wet, immediately wipe until it is completely dry.
• Do not place the Intelligent Key for an extended period in an area where temperatures exceed 140°F (60°C).
• Do not attach the Intelligent Key with a key holder that contains a magnet.
• Do not place the Intelligent Key near equipment that produces a magnetic field, such as a TV, audio equipment, personal computers or cellular phone.

The remote keyless entry function can operate all door locks using the remote keyless entry function of the Intelligent Key. The remote keyless entry function can operate at a distance of approximately 33 ft (10 m) from the vehicle. The operating distance depends upon the conditions around the vehicle.

The remote keyless entry function will not operate:
• When the Intelligent Key is not within the operational range.
• When the doors are open or not closed securely.
• When the Intelligent Key battery is discharged.

CAUTION
When locking the doors using the Intelligent Key, be sure not to leave the key in the vehicle.
Locking doors

1. Push the power switch to the OFF position and make sure you carry the Intelligent Key with you.
2. Carry the Intelligent Key with you.
3. Close all the doors.
4. Press the LOCK button on the Intelligent Key.
5. All the doors and the rear hatch will lock.
6. The hazard indicator flashes twice and the horn chirps once.

Operate the door handles to confirm that the doors have been securely locked.

Unlocking doors

1. Press the UNLOCK button on the Intelligent Key once.
2. The hazard indicator flashes once. The driver's door will unlock.
3. Press the UNLOCK button on the Intelligent Key again within one minute.
4. The hazard indicator flashes once again. All the doors and the rear hatch will unlock.

All doors will be locked automatically unless one of the following operations is performed within one minute after pressing the UNLOCK button while the doors are locked.
• Opening any door (including the rear hatch).
• Pushing the power switch.

During this one minute time period, if the UNLOCK button on the Intelligent Key is pressed, all doors will be locked automatically after another one minute.

Opening charge port lid

The charge port lid may be opened by pressing and holding the charge port unlock button.

For additional information, refer to “Opening charge port lid” in this section.
Using panic alarm

If you are near your vehicle and feel threatened, you may activate the alarm to call attention as follows:

1. Push the PANIC button on the Intelligent Key for more than 1 second.
2. The theft warning alarm and headlights will stay on for a period of time.
3. The panic alarm stops when:
   • It has run for a period of time, or
   • Any of the buttons on the Intelligent Key is pushed. (Note: The PANIC button must be pushed for more than 1 second.)

Setting hazard indicator and horn mode

This vehicle is set in hazard indicator and horn mode when you first receive the vehicle.

In hazard indicator and horn mode, when the LOCK button is pressed, the hazard indicator flashes twice and the horn chirps once. When the UNLOCK button is pressed, the hazard indicator flashes once.

If horns are not necessary, the system can be switched to the hazard indicator mode.

In hazard indicator mode, when the LOCK button is pressed, the hazard indicator flashes twice. When the UNLOCK button is pressed, neither the hazard indicator nor the horn operates.
Hazard indicator and horn mode:

<table>
<thead>
<tr>
<th>Operation</th>
<th>DOOR LOCK</th>
<th>DOOR UNLOCK</th>
</tr>
</thead>
</table>
| Pushing door handle request switch or rear hatch request switch | HAZARD - twice  
OUTSIDE CHIME - twice | HAZARD - once  
OUTSIDE CHIME - once |

Pressing ⚖ or ⚖ button | HAZARD - twice  
HORN - once | HAZARD - once  
HORN - none |

Hazard indicator mode:

<table>
<thead>
<tr>
<th>Operation</th>
<th>DOOR LOCK</th>
<th>DOOR UNLOCK</th>
</tr>
</thead>
</table>
| Pushing door handle request switch or rear hatch request switch | HAZARD - twice  
OUTSIDE CHIME - none | HAZARD - none  
OUTSIDE CHIME - none |

Pressing ⚖ or ⚖ button | HAZARD - twice  
HORN - none | HAZARD - none  
HORN - none |

Switching procedure:

To switch the hazard indicator and horn (chime) operation, press the LOCK ⚖ ① and UN-LOCK ⚖ ② buttons on the Intelligent Key simultaneously for more than two seconds.

- When the hazard indicator mode is set, the hazard indicator flashes three times.
- When the hazard indicator and horn mode is set, the hazard indicator flashes once and the horn chirps once.

3-16 Pre-driving checks and adjustments
WARNING

- Make sure that the hood is completely closed and latched before driving. Failure to do so could cause the hood to open during driving and result in an accident.
- If steam or smoke is emitting from the motor compartment, do not open the hood. Doing so could cause an injury.

When opening the hood:
1. Securely close the charge port door.
2. Pull the hood lock release handle ① located below the instrument panel. The hood will then spring up slightly.
3. Locate the lever ② in between the hood and charge port lid, and push the lever upward with your fingertips.
4. Raise the hood ③.
5. Remove the support rod ④ from the hood and insert it into the slot ⑤.

Hold the coated part ⑥ when removing or resetting the support rod. Avoid direct contact with the metal parts because they may be hot immediately after the EV system has been stopped.

When closing the hood:
1. Return the support rod to its original position.
2. Slowly move the hood down to latch the lock.
3. Push the hood down to lock the hood securely into place.
REAR HATCH

WARNING
• Always make sure that the rear hatch has been closed securely to prevent it from opening while driving.
• Do not drive with the rear hatch open.
• Make sure that all passengers have their hands, etc. inside the vehicle before closing the rear hatch.

To open the rear hatch, unlock it and push the rear hatch opener switch A. Pull up the rear hatch to open.

The rear hatch can be unlocked by:
• Pushing the rear hatch request switch. For additional information, refer to “NISSAN Intelligent Key® system” in this section.
• Pressing the UNLOCK button on the Intelligent Key. For additional information, refer to “NISSAN Intelligent Key® system” in this section.
• Pressing the UNLOCK button on the remote control. For additional information, refer to “NISSAN Intelligent Key® system” in this section.
• Pushing the power door lock switch to the “UNLOCK” position.
SECONDARY REAR HATCH RELEASE

The secondary rear hatch release mechanism allows the rear hatch to be opened in the event of a discharged battery, etc.

Push the lever to the right to open the rear hatch with a suitable tool.

If you had to open the rear hatch using this lever, have the vehicle checked as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

CHARGE PORT LID
OPENING CHARGE PORT LID

**CAUTION**

Make sure that the charge port lid is completely closed and latched before driving. Failure to do so could cause the lid to open suddenly during driving.
When opening the charge port lid perform one of the following:
• Push the charge port lid opener switch located on the instrument panel, or
• Press and hold the charge port lid unlock button on the Intelligent Key for more than one second.

When opening the charge port lid:
1. The charging status indicator lights flash and a chime sounds three times and the charge port lid will then spring up slightly.
2. Put your hand into the under side of the lid and open until it is in the fully open position.

When closing the charge port lid:
1. Slowly move the lid down.
2. Lock it securely into place.

3-20 Pre-driving checks and adjustments

**CHARGE PORT CAP**

When opening the charge port cap, press the tab inward and the cap will spring open.

When the charge port cap is closed to its previous position, it will lock automatically.
CAUTION

- When charging is finished, be sure to close the charge port cap. If water or dust gets inside the charge port, this may cause a malfunction.
- Pay particular attention when using the normal charge port as the charge port lid can be closed even when the normal charge port cap is open.
- Close the quick charge (if so equipped) port cap before closing the charging lid. The quick charge port cap can be damaged if it is open when closing the charge port lid.

WARNING

- Do not adjust the steering wheel while driving. You could lose control of your vehicle and cause an accident.
- Do not adjust the steering wheel any closer to you than is necessary for proper steering operation and comfort. The driver’s air bag inflates with great force. If you are unrestrained, leaning forward, sitting sideways or out of position in any way, you are at greater risk of injury or death in a crash. You may also receive serious or fatal injuries from the air bag if you are up against it when it inflates. Always sit back against the seatback and as far away as practical from the steering wheel. Always use the seat belts.

### STEERING WHEEL

**TILT OPERATION**

Push the lock lever down \( \textcircled{1} \) and adjust the steering wheel up or down \( \textcircled{2} \) to the desired position.

Pull the lock lever up \( \textcircled{3} \) to lock the steering wheel in place.
1. To block out glare from the front, swing down the sun visor ①.
2. To block glare from the side, remove the sun visor from the center mount and swing it to the side ②.
3. Slide the extension sun visor in or out as needed ③.

**CAUTION**
- Do not store the sun visor before returning the extension to its original position.
- Do not pull the extension sun visor forcedly downward.

**VANITY MIRROR**
To use the front vanity mirror, pull down the sun visor and pull up the cover.
CARD HOLDER (DRIVER’S SIDE ONLY)
To access the card holder, slide card in the card holder. Do not view information while operating the vehicle.

INSIDE REARVIEW MIRROR
Adjust the angle of the inside rearview mirror to the preferred position.

MANUAL ANTI-GLARE REARVIEW MIRROR (IF SO EQUIPPED)
The night position reduces glare from the headlights of vehicles behind you at night. Use the day position when driving in daylight hours.

WARNING
Use the night position only when necessary, because it reduces rearview clarity.

Pre-driving checks and adjustments 3-23
The inside mirror is designed so that it automatically changes reflection based on the intensity of the headlights of the vehicle behind.

When the system is turned on, the indicator light A will illuminate and excessive glare from the headlights of the vehicle behind you will be reduced.

Type A (if so equipped): The anti-glare system automatically turns on when the power switch is moved to the ON position.

**Do not hang any objects on the mirror or apply glass cleaner to it. Doing so will reduce the sensitivity of the sensor B, resulting in improper operation.**

Type B (if so equipped): Push the “C” switch C to make the inside rearview mirror operate normally. The indicator light will turn off. Push the “I” switch D to turn the system on.

**Do not allow any object to cover the sensors E or apply glass cleaner on them. Doing so will reduce the sensitivity of the sensor, resulting in improper operation.**

3-24 Pre-driving checks and adjustments
OUTSIDE MIRRORS
Adjusting outside mirrors

The outside mirror control switch is located on the armrest.
The outside mirror will operate only when the power switch is in the ACC or ON position.
Turn the switch right or left to select the right or left side mirror ①, then adjust the mirror using the control switch ②.

Defrosting outside mirrors (if so equipped)
The outside mirrors will be heated when the rear window defroster switch is operated. For additional information, refer to “Rear window and outside mirror (if so equipped) defroster switch” in the “Instruments and controls” section of this manual.

Folding outside mirrors
Fold the outside mirror by pushing it toward the rear of the vehicle.

WARNING
Objects viewed in the outside mirror on the passenger side are closer than they appear. Be careful when moving to the right. Using only this mirror could cause an accident. Use the inside mirror or glance over your shoulder to properly judge distances to other objects.

1. CAMERA button (if so equipped)
Failure to follow the warnings and instructions for proper use of the RearView Monitor system could result in serious injury or death.

- RearView Monitor is a convenience feature and is not a substitute for proper backing. Always turn and look out the windows and check mirrors to be sure that it is safe to move before operating the vehicle. Always back up slowly.
- The system is designed as an aid to the driver in showing large stationary objects directly behind the vehicle, to help avoid damaging the vehicle.
- The distance guide line and the vehicle width line should be used as a reference only when the vehicle is on a level paved surface. The distance viewed on the monitor is for reference only and may be different than the actual distance between the vehicle and displayed objects.

Do not scratch the camera lens when cleaning dirt or snow from the front of the camera.

The RearView Monitor system automatically shows a rear view of the vehicle when the shift lever is shifted into the R (Reverse) position or when the CAMERA button (if so equipped) is pressed. The radio can still be heard while the RearView Monitor is active.

To display the rear view, the RearView Monitor system uses a camera located just above the vehicle's license plate 1.

REARVIEW MONITOR SYSTEM OPERATION

With the power switch in the ON position, move the shift lever to the R (Reverse) position or press the CAMERA button (if so equipped) to operate the RearView Monitor.
HOW TO READ THE DISPLAYED LINES

Guiding lines which indicate the vehicle width and distances to objects with reference to the vehicle body line (A) are displayed on the monitor.

Distance guide lines
Indicate distances from the vehicle body.
- Red line 1: approx. 1.5 ft (0.5 m)
- Yellow line 2: approx. 3 ft (1 m)
- Green line 3: approx. 7 ft (2 m)
- Green line 4: approx. 10 ft (3 m)

Vehicle width guide lines (5)
Indicate the vehicle width when backing up.

Predicted course lines (models with navigation) (6)
Indicate the predicted course when backing up. The predicted course lines will be displayed on the monitor when the shift lever is in the R (Reverse) position and the steering wheel is turned. The predicted course lines will move depending on how much the steering wheel is turned and will not be displayed while the steering wheel is in the straight-ahead position.

The vehicle width guide lines and the width of the predicted course lines are wider than the actual width and course.

DIFFERENCE BETWEEN PREDICTED AND ACTUAL DISTANCES

The displayed guidelines and their locations on the ground are for approximate reference only. Objects on uphill or downhill surfaces or projecting objects will be actually located at distances different from those displayed in the monitor relative to the guidelines (refer to illustrations). When in doubt, turn around and view the objects as you are backing up, or park and exit the vehicle to view the positioning of objects behind the vehicle.

Backing up on a steep uphill
When backing up the vehicle up a hill, the distance guide lines and the vehicle width guide lines are shown closer than the actual distance. Note that any object on the hill is further than it appears on the monitor.
Backing up on a steep downhill
When backing up the vehicle down a hill, the distance guide lines and the vehicle width guide lines are shown farther than the actual distance. Note that any object on the hill is closer than it appears on the monitor.

4-6 Display screen, heater, air conditioner, audio and phone systems
HOW TO PARK WITH PREDICTED COURSE LINES (MODELS WITH NAVIGATION)

**WARNING**

- If the tires are replaced with different sized tires, the predicted course lines may be displayed incorrectly.
- On a snow-covered or slippery road, there may be a difference between the predicted course line and the actual course line.
- If the battery is disconnected or becomes discharged, the predicted course lines may be displayed incorrectly. If this occurs, please perform the following procedures:
  - Turn the steering wheel from lock to lock while the EV (electric vehicle) system is running.
  - Drive the vehicle on a straight road for more than 5 minutes.
- When the steering wheel is turned with the power switch in the ACC position, the predicted course lines may be displayed incorrectly.

1. Visually check that the parking space is safe before parking your vehicle.
2. The rear view of the vehicle is displayed on the screen A when the shift lever is moved to the R (Reverse) position.
3. Slowly back up the vehicle adjusting the steering wheel so that the predicted course lines enter the parking space.

4. Maneuver the steering wheel to make the vehicle width guide lines parallel to the parking space while referring to the predicted course lines.

5. When the vehicle is parked in the space completely, move the shift lever to the P (Park) position and apply the parking brake.

NOTE:
Do not adjust any of the display settings of the RearView Monitor while the vehicle is moving. Make sure the parking brake is firmly applied.

Models without navigation

ADJUSTING THE SCREEN

1. While on a RearView Monitor screen, press the ENTER/SETTING button until the Brightness or Contrast setting bar is displayed below the RearView Monitor screen.

2. Turn the TUNE/SCROLL knob to adjust the level.

3. To complete the adjustment, press the ENTER/SETTING button until the Brightness or Contrast setting bar disappears from the RearView Monitor screen.

4-8 Display screen, heater, air conditioner, audio and phone systems
1. While on a RearView Monitor screen, touch the touch-screen display. The Camera Setting screen will come up.
2. Touch the Display Settings key.
3. Touch the “Brightness,” “Contrast,” “Tint,” “Color,” or “Black Level” key.
4. Adjust the item by touching the + or - key on the touch-screen display.

HOW TO TURN ON AND OFF PREDICTED COURSE LINES (MODELS WITH NAVIGATION)
To toggle ON and OFF the predicted course lines while in the P (Park) position:
1. Touch the Settings key.
2. Touch the Camera key.
3. Touch the Predicted Course Lines key to turn the feature ON or OFF.
To toggle ON and OFF the predicted course lines while in the R (Reverse) position:
1. Touch the touch-screen display.
2. Touch the Predicted Course Lines key to turn the feature ON or OFF.

REARVIEW MONITOR SYSTEM LIMITATIONS

**WARNING**
Listed below are the system limitations for RearView Monitor. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.

- The system cannot completely eliminate blind spots and may not show every object.
- Underneath the bumper and the corner areas of the bumper cannot be viewed on the RearView Monitor because of its monitoring range limitation. The system will not show small objects below the bumper, and may not show objects close to the bumper or on the ground.
- Objects viewed in the RearView Monitor differ from actual distance because a wide-angle lens is used.
- Objects in the RearView Monitor will appear visually opposite compared to when viewed in the rearview and outside mirrors.
- Use the displayed lines as a reference. The lines are highly affected by the number of occupants, fuel level, vehicle position, road conditions and road grade.
- Make sure that the rear hatch is securely closed when backing up.
- Do not put anything on the rearview camera. The rearview camera is installed above the license plate.
When washing the vehicle with high pressure water, be sure not to spray it around the camera. Otherwise, water may enter the camera unit causing water condensation on the lens, a malfunction, fire or an electric shock.

Do not strike the camera. It is a precision instrument. Otherwise, it may malfunction or cause damage resulting in a fire or an electric shock.

The following are operating limitations and do not represent a system malfunction:

• When the temperature is extremely high or low, the screen may not clearly display objects.
• When strong light directly shines on the camera, objects may not be displayed clearly.
• Vertical lines may be seen in objects on the screen. This is due to strong reflected light from the bumper.
• The screen may flicker under fluorescent light.
• The colors of objects on the RearView Monitor may differ somewhat from the actual color of objects.
• Objects on the monitor may not be clear in a dark environment.

There may be a delay when switching between views.

If dirt, rain or snow accumulate on the camera, RearView Monitor may not display objects clearly. Clean the camera.

Do not use wax on the camera lens. Wipe off any wax with a clean cloth dampened with a diluted mild cleaning agent, then wipe with a dry cloth.

SYSTEM MAINTENANCE

CAUTION

• Do not use alcohol, benzine or thinner to clean the camera. This will cause discoloration.
• Do not damage the camera as the monitor screen may be adversely affected.

If dirt, rain or snow accumulates on the camera ①, the RearView Monitor may not display objects clearly. Clean the camera by wiping it with a cloth dampened with a diluted mild cleaning agent and the wiping it with a dry cloth.
1. CAMERA button

AROUND VIEW® MONITOR (IF SO EQUIPPED)

Display screen, heater, air conditioner, audio and phone systems 4-11
A WARNING
Failure to follow the warnings and instructions for proper use of the Around View® Monitor system could result in serious injury or death.
• The Around View® Monitor is a convenience feature and is not a substitute for proper vehicle operation because it has areas where objects cannot be viewed. The four corners of the vehicle in particular, are areas where objects do not always appear in the bird’s-eye, front, or rear views. Always check your surroundings to be sure that it is safe to move before operating the vehicle. Always operate the vehicle slowly.
• The driver is always responsible for safety during parking and other maneuvers.

A CAUTION
Do not scratch the camera lens when cleaning dirt or snow from the front of the camera.

The Around View® Monitor system is designed as an aid to the driver in situations such as slot parking or parallel parking. The monitor displays various views of the position of the vehicle in a split screen format. Not all views are available at all times.

Available views:
• Front View
  An approximately 150–degree view of the front of the vehicle.
• Rear View
  An approximately 150–degree view of the rear of the vehicle.
• Bird’s-Eye View
  The surrounding views of the vehicle from above.
• Front-Side View
  The view around and ahead of the front passenger’s side wheel.

To display the multiple views, the Around View® Monitor system uses cameras located in the front grille, on the vehicle’s outside mirrors and one just above the vehicle’s license plates ①.

AROUND VIEW® MONITOR SYSTEM OPERATION
With the power switch in the ON position, move the shift lever to the R (Reverse) position or press the CAMERA button to operate the Around View® Monitor. The screen displayed on the Around View® Monitor will automatically return to the previous screen 3 minutes after the CAMERA button has been pressed with the shift lever in a position other than the R (Reverse) position.
Available views

**WARNING**

- The distance guide lines and the vehicle width lines should be used as a reference only when the vehicle is on a paved, level surface. The apparent distance viewed on the monitor may be different than the actual distance between the vehicle and displayed objects.
- Use the displayed lines and the bird’s eye view as a reference. The lines and the bird’s-eye view are greatly affected by the number of occupants, cargo, fuel level, vehicle position, road condition and road grade.
- If the tires are replaced with different sized tires, the predicted course lines and the bird’s-eye view may be displayed incorrectly.
- When driving the vehicle up a hill, objects viewed in the monitor are further than they appear. When driving the vehicle down a hill, objects viewed in the monitor are closer than they appear.
- Objects in the rear view will appear visually opposite compared to when viewed in the rear view and outside mirrors.
- Use the mirrors or actually look to properly judge distances to other objects.
- On a snow-covered or slippery road, there may be a difference between the predicted course lines and the actual course line.
- The vehicle width and predicted course lines are wider than the actual width and course.
- The displayed lines will appear slightly off to the right, because the rearview camera is not installed in the rear center of the vehicle.

**Front view**

Guiding lines that indicate the approximate vehicle width and distance to objects with reference to the vehicle body lines are displayed on the monitor.

**Distance guide lines:**

Indicate distances from the vehicle body:
- Red line: approximately 1.5 ft (0.5 m)
- Yellow lines: approximately 3 ft (1 m)
- Green lines: approximately 7 ft (2 m)
- Green lines: approximately 10 ft (3 m)
Vehicle width guide lines (5):
Indicate the approximate vehicle width when backing up.

Predicted course lines (6):
Indicate the predicted course when operating the vehicle. The predicted course lines will be displayed on the monitor when the steering wheel is turned. The predicted course lines will move depending on how much the steering wheel is turned and will not be displayed while the steering wheel is in the straight-ahead position. The front view will not be displayed when the vehicle speed is above 6 mph (10 km/h).

NOTE:
When the monitor displays the front view and the steering wheel turns about 90 degrees or less from the straight-ahead position, both the right and left predicted course lines (6) are displayed. When the steering wheel turns about 90 degrees or more, a line is displayed only on the opposite side of the turn.

Rear view

Birds-eye view:
The bird’s-eye view shows the overhead view of the vehicle, which helps confirm the vehicle position and the predicted course to a parking space. The vehicle icon (1) shows the position of the vehicle. Note that the apparent distance between objects viewed in the bird’s-eye view may differ somewhat from the actual distance to the vehicle. The areas that the cameras cannot covers (2) are indicated in black. The non-viewable areas (2) is highlighted in yellow for several seconds after the bird’s-eye view is displayed. It will be shown only the first time after the power switch is placed in the ON position.

4-14 Display screen, heater, air conditioner, audio and phone systems
**WARNING**

- Objects in the bird’s-eye view will appear further than the actual distance.
- Tall objects, such as a curb or vehicle, may be misaligned or not displayed at the seam of the views.
- Objects that are above the camera cannot be displayed.
- The view for the bird’s-eye view may be misaligned when the camera position alters.
- A line on the ground may be misaligned and is not seen as being straight at the seam of the views. The misalignment will increase as the line proceeds away from the vehicle.

**Front-side view:**

**Guiding lines**

Guiding lines that indicate the approximate width and the front end of the vehicle are displayed on the monitor.

The front-of-vehicle line ① shows the front part of the vehicle.

The side-of-vehicle line ② shows the approximate vehicle width including the outside mirrors.

The extensions ③ of both the front ① and side ② lines are shown with a green dotted line.

**DIFFERENCE BETWEEN PREDICTED AND ACTUAL DISTANCES**

The displayed guidelines and their locations on the ground are for approximate reference only. Objects on uphill or downhill surfaces or projecting objects will be actually located at distances different from those displayed in the monitor relative to the guidelines (refer to illustrations). When in doubt, turn around and view the objects as you are backing up, or park and exit the vehicle to view the positioning of objects behind the vehicle.

Display screen, heater, air conditioner, audio and phone systems 4-15
Backing up on a steep uphill
When backing up the vehicle up a hill, the distance guide lines and the vehicle width guide lines are shown closer than the actual distance. Note that any object on the hill is further than it appears on the monitor.

Backing up on a steep downhill
When backing up the vehicle down a hill, the distance guide lines and the vehicle width guide lines are shown farther than the actual distance. Note that any object on the hill is closer than it appears on the monitor.

Backing up near a projecting object
The predicted course lines do not touch the object in the display. However, the vehicle may hit the object if it projects over the actual backing up course.

Display screen, heater, air conditioner, audio and phone systems
The position $C$ is shown farther than the position $B$ in the display. However, the position $C$ is actually at the same distance as the position $A$. The vehicle may hit the object when backing up to the position $A$ if the object projects over the actual backing up course.

**WARNING**

- If the tires are replaced with different sized tires, the predicted course lines may be displayed incorrectly.
- On a snow-covered or slippery road, there may be a difference between the predicted course line and the actual course line.
- If the battery is disconnected or becomes discharged, the predicted course lines may be displayed incorrectly. If this occurs, please perform the following procedures:
  - Turn the steering wheel from lock to lock while the EV (electric vehicle) System is running.
  - Drive the vehicle on a straight road for more than 5 minutes.
- When the steering wheel is turned with the power switch in the ACC position, the predicted course lines may be displayed incorrectly.

Display screen, heater, air conditioner, audio and phone systems  4-17
1. Visually check that the parking space is safe before parking your vehicle.

2. The rear view of the vehicle is displayed on the screen A when the shift lever is moved to the R (Reverse) position.

3. Slowly back up the vehicle adjusting the steering wheel so that the predicted course lines B enter the parking space C.

4. Maneuver the steering wheel to make the vehicle width guide lines D parallel to the parking space C while referring to the predicted course lines.

5. When the vehicle is parked in the space completely, move the shift lever to the P (Park) position and apply the parking brake.

HOW TO SWITCH THE DISPLAY

With the power switch in the ON position, press the CAMERA button or move the shift lever to the R (Reverse) position to operate the Around View® Monitor.

The Around View® Monitor displays different split screen views depending on the position of the shift lever. Press the CAMERA button to switch between the available views.

If the shift lever is in the R (Reverse) position, the available views are:
- Rear view/bird’s-eye view split screen
- Rear view/front-side view split screen

If the shift lever is in the P (Park) position, the available views are:
- Front view/bird’s-eye view split screen
- Front view/front-side view split screen

The display will switch from the Around View® Monitor screen when:

If the shift lever is in the D (Drive) position, the only available view is front view/front-side view split screen.

- The shift lever is in the D (Drive) position and the vehicle speed increases above approximately 6 mph (10 km/h).
- A different screen is selected.

4-18 Display screen, heater, air conditioner, audio and phone systems
ADJUSTING THE SCREEN
1. Touch the touch-screen display with the Around View® Monitor on.
2. Touch the “Brightness,” “Contrast,” “Tint,” “Color,” or “Black Level” key.
3. Adjust the item by touching the + or — key on the touch-screen display.

NOTE:
Do not adjust any of the display settings of the Around View® Monitor while the vehicle is moving. Make sure the parking brake is firmly applied.

AROUND VIEW® MONITOR SYSTEM LIMITATIONS

WARNING
Listed below are the system limitations for Around View® Monitor. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.

• Do not use the Around View® Monitor with the outside mirrors in the stored position, and make sure that the rear hatch is securely closed when operating the vehicle using the Around View® Monitor.
• The apparent distance between objects viewed on the Around View® Monitor differs from the actual distance.
• The cameras are installed on the front grille, the outside mirrors and above the rear license plate. Do not put anything on the vehicle that covers the cameras.
• When washing the vehicle with high pressure water, be sure not to spray it around the cameras. Otherwise, water may enter the camera unit causing water condensation on the lens, a malfunction, fire or an electric shock.
• Do not strike the cameras. They are precision instruments. Doing so could cause a malfunction or cause damage resulting in a fire or an electric shock.

There are some areas where the system will not show objects and the system does not warn of moving objects. When in the front or rear view display, an object below the bumper or on the ground may not be viewed ①. When in the bird's-eye view, a tall object near the seam ② of the camera viewing areas will not appear in the monitor.

The following are operating limitations and do not represent a system malfunction:
• There may be a delay when switching between views.
• When the temperature is extremely high or low, the screen may not display objects clearly.
• When strong light directly shines on the camera, objects may not be displayed clearly.
• The screen may flicker under fluorescent light.
• The colors of objects on the Around View® Monitor may differ somewhat from the actual color of objects.

• Objects on the Around View® Monitor may not be clear and the color of the object may differ in a dark environment.
• There may be differences in sharpness between each camera view of the bird’s-eye view.
• Do not use wax on the camera lens. Wipe off any wax with a clean cloth that has been dampened with a diluted mild cleaning agent, then wipe with a dry cloth.

System temporarily unavailable
When the “!” icon is displayed on the screen, there are abnormal conditions in the Around View® Monitor. This will not hinder normal driving operation but the system should be inspected. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
When the “[X]” icon is displayed on the screen, the camera image may be receiving temporary electronic disturbances from surrounding devices. This will not hinder normal driving operation but the system should be inspected if it occurs frequently. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**SYSTEM MAINTENANCE**

- **CAUTION**
  - Do not use alcohol, benzine or thinner to clean the camera. This will cause discoloration.
  - Do not damage the cameras as the monitor screen may be adversely affected.

If dirt, rain or snow accumulates on any of the cameras ①, the Around View® Monitor may not display objects clearly. Clean the camera by wiping with a cloth dampened with a diluted mild cleaning agent and then wiping with a dry cloth.

**CENTER VENTS**

Open/close the vents by moving the control to either direction.

- : This symbol indicates that the vents are closed. Moving the side control to this direction will close the vents.

- : This symbol indicates that the vents are open. Moving the side control to this direction will open the vents.

Adjust the air flow direction of the vents by moving the vent slide (up/down) until the desired position is achieved.

Display screen, heater, air conditioner, audio and phone systems  4-21
SIDE VENTS
Open/close the vents by moving the control to either direction.

- This symbol indicates that the vents are closed. Moving the side control to this direction will close the vents.
- This symbol indicates that the vents are open. Moving the side control to this direction will open the vents.

Adjust the air flow direction of the vents by moving the vent slide (up/down, left/right) until the desired position is achieved.

HEATER AND AIR CONDITIONER (AUTOMATIC)

WARNING
- The air conditioning cooling function operates only when the power switch is in the ON position or when the READY to drive indicator light is ON.
- Do not leave children or adults who would normally require the assistance of others alone in your vehicle. Pets should also not be left alone. They could accidentally injure themselves or others through inadvertent operation of the vehicle. Also, on hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
- Do not use the recirculation mode for long periods as it may cause the interior air to become stale and the windows to fog up.
NOTE:
- Odors from inside and outside the vehicle can build up in the air conditioner unit. Odor can enter the passenger compartment through the vents.
- When parking, set the heater or air conditioner controls to turn off air recirculation to allow fresh air into the passenger compartment. This should help reduce odors inside the vehicle.

The climate control system (air conditioner and heater functions) can be operated when the READY to drive indicator light is illuminated. However, while charging, the climate control system can be used when the power switch is in the ON position.

The fan, heater and air conditioning can be turned on manually, using the timer function and using the remote climate control function. These functions operate in the following conditions.

<table>
<thead>
<tr>
<th>Power switch position</th>
<th>LOCK/OFF</th>
<th>ACC</th>
<th>ON</th>
<th>READY to drive</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Remote control*3</td>
<td>Available</td>
<td>Available</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

*1: The climate control system will only start when charging is being performed. After charging is complete, it will continue to operate if the EVSE (Electric Vehicle Supply Equipment) is connected.
*2: The EVSE (Electric Vehicle Supply Equipment) must be connected.
*3: Models with navigation system.

NOTE:
- A series of operation sounds may be heard immediately after climate control ON/OFF operation. This is not a malfunction.
- Compressor and motor fan may suddenly start to operate during charging operation. This is not a malfunction.
- Condensation forms inside the air conditioning unit when the air conditioner is running, and is safely discharged underneath your vehicle. Traces of water on the ground are therefore normal. Water may drop underneath the vehicle when climate control is operating.
NOTE:

- If the READY to drive indicator light is illuminated and the EVSE (Electric Vehicle Supply Equipment) is connected to the vehicle, the power switch will change to the ON position. At the same time, the climate control system will stop operating. However, the fan will continue to operate. If you want to turn on climate control again, place the power switch in the OFF position and then place it in the ON position again after confirming that the vehicle has started charging.

- When the power switch is in the ON position, if the power supply from the EVSE (Electric Vehicle Supply Equipment) is interrupted due to an electrical outage, etc., the system will operate in the following ways.
  - If it occurs while charging is being performed:
    - The climate control system will stop once. If the power supply is restored within approximately 5 minutes, the climate control system will restart. However, if more than 5 minutes have elapsed, the climate control system will not restart.
  - If it occurs after charging has finished:
    - The climate control system will stop.

OPERATING TIPS

- The automatic climate control is equipped with sensors as illustrated. The sensors A and B help maintain a constant temperature. Do not put anything on or around these sensors.

- Power consumption of the climate control system varies depending on the outside temperature and the temperature set for the climate control system. Power consumption increases if the interior temperature is cooled down too much in summer or if it warmed up too much in winter. This will result in a reduced driving range.
• Using the AUTO mode will help reduce the power consumption of the climate control.
• When the AUTO button is pressed, the AUTO indicator illuminates. The HEAT button indicator or the A/C button indicator illuminates according to the operation of the climate control system.
• If any of the MODE, A/C, HEAT, fan speed control, front defroster, intake air control is pushed when the AUTO indicator illuminates, the AUTO indicator will be turned off.

• If the charger is connected to the vehicle when it is in the READY to drive mode and the air conditioner or heater is on, the power switch automatically changes to the ON position. The climate control system automatically turns off the heater or air conditioner and switches to the air recirculation mode. Place the power switch in the off position to begin charging. Turn on the desired climate control function.
• For normal charge, the climate control system is operative when charging operation is complete. For quick charge however, the climate control system stops operating when charging operation stops.
• The climate control timer or remote climate control (for models with Navigation) may fog up windows depending on the set temperature (for models with Navigation) or outside temperature.
• When turning on the seat heater switch prior to operating the climate control timer or the remote climate control (for models with Navigation), the seat heater will also turn on automatically when the outside temperature is low.

IN-CABIN MICROFILTER
The climate control system is equipped with an in-cabin microfilter which collects dirt, dust etc. To make sure the air conditioner heats defogs, and ventilates efficiently, replace the filter regularly. To replace the filter, it is recommended that you visit a NISSAN certified LEAF dealer.

The filter should be replaced if the air flow decreases significantly or if windows fog up easily when operating the climate control system.
AUTOMATIC CLIMATE CONTROL (MODELS WITHOUT NAVIGATION SYSTEM)

1. (fan speed control) dial
2. (intake air control) button
3. (front defroster) button
4. Climate Ctrl. display
5. Rear window and outside mirror (if so equipped) defroster switch
6. Temperature control dial
7. AUTO climate control ON button
8. A/C (air conditioner) button
9. MODE (manual air flow control) button
10. HEAT button
11. Climate control system OFF button

Automatic operation (AUTO)

The AUTO mode may be used year-round as the system automatically controls constant temperature, air flow distribution and fan speed.

1. Press the AUTO button. The AUTO indicator will be illuminated.
2. Turn the temperature control dial to set the desired temperature.

When any of the following functions are operated, the AUTO indicator will turn off.
- The HEAT or A/C button is pressed.
- The fan speed control or ventilator air flow control is operated.
- The intake air control is switched.

However, the functions that were not operated continue operating in AUTO mode.
NOTE:

• If the fan speed control dial, MODE button, or intake air control button is operated while AUTO is in use, all the other buttons operate in AUTO mode.

• While the AUTO indicator is illuminated, electric power consumption of the air conditioner can be economized compared to the amount consumed while the AUTO indicator is not illuminated.

The HEAT indicator light and the A/C indicator light illuminates according to the operation modes of the climate control system.

<table>
<thead>
<tr>

</tbody>
</table>

Manual operation

The manual mode can be used to control the heater and air conditioner to your desired temperature.

The HEAT indicator light and the A/C indicator light illuminates according to the operation modes.

**Display screen, heater, air conditioner, audio and phone systems** 4-27
NOTE:
- The ventilation mode requires a lower power consumption, so cruising distance will increase.
- In ventilation mode, temperature is not indicated on the air conditioner display.

Dehumidified defrosting/defogging:
Press the front defroster button (the indicator light will illuminate).
- To remove moisture or fog on the front window quickly, set the temperature to the high temperature and the fan speed to their maximum level.
- After the windshield is cleared, press the front defroster button again (the indicator light will turn off).
- When the front defroster button is pressed, the air conditioner will automatically turn on to defog the windshield. The outside air recirculation mode will be selected to improve the defogging performance.

Fan speed control:
Turn the fan speed control dial to manually control the fan speed.
Press the AUTO button to change the fan speed to the automatic mode.

Air flow control:
Press the MODE button to change the air flow mode.
- Air flows from the center and side ventilators.
- Air flows from the center and side ventilators and foot outlets.
- Air flows mainly from the foot outlets.
- Air flows from the defroster outlets and foot outlets.

Temperature control:
Turn the temperature control dial to set the desired temperature.

Air recirculation:
Press the intake air control button to change the air circulation mode. When the indicator light illuminates, the flowing air is recirculated inside the vehicle.

Outside air circulation:
Press the intake air control button to change the air circulation mode. When the indicator light does not illuminate, the flowing air is drawn from outside the vehicle.

Automatic air intake control:
To set the automatic control mode, press and hold the intake air control button. The indicator light will blink twice and the inside/outside circulation will then be controlled automatically. When in automatic mode, the indicator light will come on when inside air recirculation is active.

Rear window and outside mirror (if so equipped) defroster switch:
For additional information, refer to “Rear window and outside mirror (if so equipped) defroster switch” in the “Instruments and controls” section of this manual.
To turn the system off

To turn off the climate control, press the Climate control system OFF button. The same operating mode (Heater or A/C) that was active when the system is turned off is active when system is turned back on.

Climate Ctrl. Timer

While the charger is connected to the vehicle, this function pre-heats or pre-cools the passenger compartment of the vehicle to the temperature set by default before driving. This helps reduce power consumption from the Li-ion battery.

As the temperature is set to the factory default setting, the user cannot adjust the temperature.

The Climate Ctrl. Timer operates the air conditioner using power from the charger. Electric power from the Li-ion battery is not used.

Once the Climate Ctrl. Timer is set, it automatically starts so the vehicle compartment will be cooled/heated to the temperature set by default by the registered departure time. It is therefore not necessary to set the Climate Ctrl. Timer everyday.

**WARNING**

Even if the Climate Ctrl. Timer is set, the temperature in the passenger compartment may become high or low if the system automatically stops. Do not leave children or adults who would normally require the support of others alone in your vehicle. Pets should not be left alone either. On hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals. Also on cold days, temperature in a vehicle could become low enough to cause severe or possible fatal injuries to people or animals.

1. Push the switch A on the left side of the combination meter panel.

2. Push the switch B until “Climate Ctrl. Timer” is highlighted on the vehicle information display and then push the switch A.

Display screen, heater, air conditioner, audio and phone systems 4-29
3. The “Climate Ctrl. Timer” screen is displayed. To change the time of day and the day of the week that the climate control timer turns on or off, or to turn the climate control timer on or off, push the switch.

4. To turn the timer on or off, use the switch to highlight “On” or “Off” and then push the switch. If “On” is selected, an additional screen is displayed that allows you to change the time or the climate control timer.

4-30 Display screen, heater, air conditioner, audio and phone systems
5. The hour portion of the time is highlighted on the screen. Push the switch to change the hour field in increments of one hour. Push and hold the switch to move to the minutes field.

6. Push the switch to change the minute field in increments of ten minutes. Push and hold the switch to move to fast forward the minutes. Push the switch to move to the day of the week setting.

7. Push the switch to set the day to on or off. increments of ten minutes. Push the switch and then set the next day with the same procedure. When all days of the week have been set, push the switch.
8. The settings confirmation screen will be displayed. To confirm and finish setting the climate control timer, push the switch.
AUTOMATIC CLIMATE CONTROL
(MODELS WITH NAVIGATION SYSTEM)

1. Temperature control button
2. HEAT button
3. Climate Ctrl. Timer indicator
4. (front defroster) button
5. (fan speed control) button
6. Rear window and outside mirror de-froster switch
7. (intake air control) button
8. Climate control system ON-OFF button
9. AUTO climate control ON button

10. MODE (manual air flow control) button
11. A/C (air conditioner) ON-OFF button

Automatic operation (AUTO)
The AUTO mode may be used year-round as the system automatically controls constant temperature, air flow distribution and fan speed.

1. Press the AUTO button. The AUTO indicator will be illuminated.
2. Press the temperature control button to set the desired temperature.

When any of the following functions are operated, the AUTO indicator will turn off.
• The HEAT or A/C button is pressed.
• The fan speed control or ventilator air flow control is operated.
• The intake air control is switched.

However, the functions that were not operated continue operating in AUTO mode.
NOTE:

- If the fan speed control button, MODE button, or intake air control button is operated while AUTO is in use, all the other buttons operate in AUTO mode.
- While the AUTO indicator is illuminated, electric power consumption of the air conditioner can be economized compared to the amount consumed while the AUTO indicator is not illuminated.

The HEAT indicator light and the A/C indicator light illuminates according to the operation modes of the climate control system.

### Operation mode

<table>
<thead>
<tr>
<th>Operation mode</th>
<th>A/C indicator</th>
<th>HEAT indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cooling</td>
<td>ON</td>
<td>OFF</td>
</tr>
<tr>
<td>Dehumidified heating</td>
<td>ON</td>
<td>ON</td>
</tr>
<tr>
<td>Heating (A/C off)</td>
<td>OFF</td>
<td>ON</td>
</tr>
<tr>
<td>Ventilation</td>
<td>OFF</td>
<td>OFF</td>
</tr>
</tbody>
</table>

Manual operation

The manual mode can be used to control the heater and air conditioner to your desired temperature.

### Cooling:

1. Press the A/C button to illuminate the A/C indicator light.
2. Press the HEAT button to turn off the HEAT indicator light.
- Do not set the temperature higher than the outside air temperature. Doing so may prevent the temperature from being controlled properly.
- A visible mist may be seen coming from the ventilators in hot, humid conditions as the air is cooled rapidly. This does not indicate a malfunction.

### Dehumidified heating:

1. Press the A/C button to illuminate the A/C indicator light.
2. Press the HEAT button to illuminate the HEAT indicator light

NOTE:

Electric power consumption of climate control increases while A/C button indicator and HEAT button indicator simultaneously illuminate. As a result, the driving range may be decreased.

### Heating (A/C off):

1. Press the HEAT button to illuminate the HEAT indicator light.
2. Press the A/C button to turn off the A/C indicator light.
- Do not set temperature lower than the outside air temperature. Doing so may prevent the temperature from being controlled properly.
- If the windows fog up, use dehumidified heating instead of the A/C off heating.

### Ventilation:

Press the HEAT button and A/C button if the indicator lights are on so that both indicator lights turn off.
NOTE:
• The ventilation mode requires a lower power consumption, so cruising distance will increase.
• In ventilation mode, temperature is not indicated on the navigation monitor or on the air conditioner display.

Dehumidified defrosting/defogging:
Press the front defroster button (the indicator light will illuminate).
• To remove moisture or fog on the front window quickly, set the temperature to the high temperature and the fan speed to their maximum level.
• After the windshield is cleared, press the front defroster button again (the indicator light will turn off).
• When the front defroster button is pressed, the air conditioner will automatically turn on to defog the windshield. The outside air recirculation mode will be selected to improve the defogging performance.

Fan speed control:
Press the fan speed control button to manually control the fan speed.
Press the AUTO button to change the fan speed to the automatic mode.

Air flow control:
Press the MODE button to change the air flow mode.

Temperature control:
Press the temperature control buttons to set the desired temperature.

Air recirculation:
Press the intake air control button to change the air circulation mode. When the indicator light illuminates, the flowing air is recirculated inside the vehicle.

Outside air circulation:
Press the intake air control button to change the air circulation mode. When the indicator light does not illuminate, the flowing air is drawn from outside the vehicle.

Automatic air intake control:
To set the automatic control mode, press and hold the intake air control button. The indicator light will blink twice and the inside/outside circulation will then be controlled automatically. When in automatic mode, the indicator light will come on when inside air recirculation is active.

Rear window and outside mirror defroster switch:
For additional information, refer to “Rear window and outside mirror (if so equipped) defroster switch” in the “Instruments and controls” section of this manual.

To turn the system off
To turn off the climate control, press the Climate control system ON-OFF button. The same operating mode (Heater or A/C) that was active when the system is turned off is active when system is turned back on.

Display screen, heater, air conditioner, audio and phone systems 4-35
Climate Ctrl. Timer

While the charging connector is connected to the vehicle, this function pre-heats or pre-cools the passenger compartment of the vehicle to the temperature before driving. This helps reduce power consumption from the Li-ion battery.

The Climate Ctrl. Timer operates the air conditioner using power from the charger. Electric power from the Li-ion battery is not used.

The Climate Ctrl. Timer function allows two different timer settings. Each timer charge function can be set to activate on a different day of the week.

Once the Climate Ctrl. Timer is set, it will complete air conditioning by the time that is set. It is not necessary to set the Climate Ctrl. Timer everyday.

WARNING

Even if the Climate Ctrl. Timer is set, the temperature in the passenger compartment may become high or low if the system automatically stops. Do not leave children or adults who would normally require the support of others alone in your vehicle. Pets should not be left alone either. On hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals. Also on cold days, temperature in a vehicle could become low enough to cause severe or possible fatal injuries to people or animals.

How to set Climate Ctrl. Timer

1. Push the (Zero Emission menu) button.
2. Touch “Climate Ctrl. Timer”.

3. Touch “Edit Schedule”. The Climate Ctrl. Timer setting screen is displayed. Set preferred time and day of the week for Climate Ctrl. Timer.

4. After the setting is complete, place the power switch in the OFF position, and then connect the charge connector to the vehicle.

Climate Ctrl. Timer setting screen

1. Touch to turn on/off the timer. The indicator light will turn on when the timer setting is turned on.

2. Indicates the departure time. Climate Control Timer will be activated in order that the vehicle compartment will be cooled/heated to set temperature and turn off itself by the departure time.

Display screen, heater, air conditioner, audio and phone systems 4-37
3 Touch corresponding keys to adjust the time setting.
[\(-\)]: Touch or touch and hold to decrease the value.
[\(\pm\)]: Touch or touch and hold to increase the value.
[\(\bigcirc\)]: Touch to delete the numbers entered.
4 Touch the keys to set the days of the week you wish to activate the Climate Control system.
5 Touch to save the setting.

Priority setting between timer charge and Climate Ctrl. Timer
If the timer charge function and the Climate Ctrl. Timer function are in operation at the same time due to an overlap of the timer settings, either function can be set to be preferentially provided with electric power.

1. Push < and touch [Climate Ctrl. Timer].
2. Touch [Timer With Priority]. Priority setting screen is displayed.
3. Select the preferred setting.

<table>

</table>

Operating tips for using Climate Ctrl. Timer
- Temperature setting for the Climate Ctrl. can be changed from [Timer/ Remote —Set Climate Temp].
- The Climate Ctrl. Timer will only start when the power switch is in the OFF position. Always turn the power switch to the OFF position after the Climate Ctrl. Timer is set.
- To turn off the Climate Ctrl. Timer function, touch [ON] until the indicator turns off. The start and stop time settings will not be deleted even if the Climate Ctrl. Timer function is turned off.
- While the Climate Ctrl. Timer is operating, the Climate Ctrl. indicator lights flash. If the Climate Ctrl. Timer is set to activate, the Climate Ctrl. Timer indicator illuminates.
- If the timer charge function and the Climate Ctrl. Timer function are in operation at the same time due to an overlap of the timer settings, either function can be set to be preferentially provided with electric power.
- If the Climate Ctrl. Timer starts operating while the vehicle is being charged, the time required for charging will be longer.
- Operating the Climate Ctrl. Timer or remote climate control in an environment where the temperature is low may decrease the rate of battery charge.
- Timer setting can also be changed while Climate Ctrl. Timer is operated. When the power
position is switched to OFF, the air conditioner starts or enters waiting mode depending on the new timer settings.

- When the difference in temperature between the air conditioner setting temperature and the temperature outside the vehicle is large, the temperature inside the vehicle may not be maintained at the setting temperature.
- The charging status indicator lights illuminate in a specific pattern when the Li-ion battery warmer operates. The charging status indicator lights use the same pattern to indicate 12-volt battery charging, Climate Ctrl. Timer operation or Remote Climate Control operation. The charging status indicator lights do not change if the Li-ion battery warmer operates at the same time as the above features.
- The temperature in the passenger compartment may not be comfortable if entering the vehicle too soon before or too long after the scheduled time of departure.
- Air conditioning is limited to the capacity of the electric power when the charge connector is connected. Therefore, the temperature may not reach the set temperature due to limitations in air conditioning performance, if ambient temperature is excessively high or low, or if the charge connector is connected to a 120-volt plug outlet.
- The Climate Ctrl. Timer operates the climate control function so that a comfortable temperature is provided in the passenger compartment at the scheduled time of departure. The climate control is set to stop at the scheduled time of departure.

Remote climate control
This vehicle incorporates a communication device that is called a TCU (Telematics Communication Unit). The communication connection between this unit and Nissan Data Center allows for various remote function services.

Even when away from the vehicle, climate control can be started by accessing the Nissan Data Center website using a cellular phone or a personal computer.

When operation is started, or at the set start time, the Nissan Data Center accesses the vehicle. When the vehicle receives a command for remote operation, the climate control immediately turns ON and operates for the specified period of time. Confirmation of the ON/OFF of the climate control operation can be checked by accessing the website or by e-mail.

Completing registration for the NissanConnectSM Mobile Apps service is necessary before using the service. For additional information, refer to the separate LEAF Navigation System Owner’s Manual.

**WARNING**

- Radio waves could adversely affect electric medical equipment. For additional information, refer to your electric medical equipment manufacturer for the possible effect on pacemakers before using the remote climate control.
- Even if the remote climate control is set, the temperature in the passenger room may become high if the system automatically stops. Do not leave children or adults who would normally require the support of others alone in your vehicle. Pets should not be left alone either. On hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
NOTE:

- To check the Li-ion battery charging status using an internet enabled smart phone or personal computer.
  - The vehicle must be located in a cellular phone coverage area.
  - The cellular phone must be located in an area with cellular phone coverage.
  - The computer must be connected to the internet.
- Some cellular phones are not compatible with this system and cannot be used to check the Li-ion battery charging status. Confirm this beforehand.

Operating tips:

- When the charge connector is connected, the climate control operates using electric power. When the charge connector is disconnected from the vehicle, the climate control operates using vehicle battery electric power.
- The climate control can be operated for a maximum of 2 hours when the charge connector is connected to the vehicle, or a maximum of 15 minutes when the charge connector is disconnected.
- The remote climate control will only start to operate when the power switch is in the OFF position. Be sure to check that the power switch is in the OFF position.
- Remote climate control operation is not available when the vehicle is in an area of cellular communication range.
- Communication becomes unavailable when the vehicle is not used for two weeks or more. When the power switch is placed in the ON position, communication with the Nissan Data Center can be restored.
- Air conditioning is limited to the capacity of the electric power when the charge connector is connected to the vehicle. Therefore, the temperature may not reach a comfortable level due to performance of the air conditioning being limited, if the outside temperature is excessively high or low, or if the charge connector is connected to a 120-volt outlet.
- If the power switch is in the ON position or the charge connector is disconnected, while the remote climate control is being operated, remote climate control operation is automatically stopped and an e-mail is sent.
- If remote climate control operation is started while the vehicle is in normal charge mode, the climate control operates in climate control priority mode and charging is continued.
- If remote climate control operation is started and charging is stopped while the vehicle is in quick charge mode, climate control operation is also stopped.
- If the quick charge connector is connected and charging is not performed, remote climate control operation starts using the battery electric power of the vehicle.

Temperature settings

This procedure sets the temperature of Climate Ctrl. timer and remote climate control.
1. Press the Zero Emission menu key. Touch “Zero Emission Settings”.
2. Touch “Timer/Remote – Set Climate Temp”.
3. Set the temperature and the touch “OK”.

**NOTE:**
- The temperature in the passenger compartment may not be comfortable if entering the vehicle too soon before or too long after the scheduled time of departure.
- Air conditioning is limited to the capacity of the electric power when the charge connector is connected. Therefore, the temperature may not reach the set temperature due to limitations in air conditioning performance, if ambient temperature is excessively high or low, or if the charge connector is connected to a 120-volt plug outlet.
- The Climate Ctrl. Timer operates the climate control function so that a comfortable temperature is provided in the passenger compartment at the scheduled time of departure. The climate control is set to stop at the scheduled time of departure.

**SERVICING CLIMATE CONTROL**

The climate control system in your NISSAN is charged with a refrigerant designed with the environment in mind. This refrigerant will not harm the earth’s ozone layer. Special charging equipment and lubricant are required when servicing your NISSAN climate control. Using improper refrigerants or lubricants will cause severe damage to your climate control system. For additional information, refer to “Recommended fluids/lubricants and capacities” in the “Technical and consumer information” section.

It is recommended that you visit a NISSAN certified LEAF dealer to service your environmentally friendly climate control system.
RADIO

Push the power switch to the ACC or ON position and press the radio band select button to turn on the radio. If you listen to the radio while the READY to drive indicator light is off, the power switch should be pushed to the ACC position.

Radio reception is affected by station signal strength, distance from radio transmitter, buildings, bridges, mountains and other external influences. Intermittent changes in reception quality normally are caused by these external influences.

Using a cellular phone in or near the vehicle may influence radio reception quality.

Radio reception

Your NISSAN radio system is equipped with state-of-the-art electronic circuits to enhance radio reception. These circuits are designed to extend reception range, and to enhance the quality of that reception.

However, there are some general characteristics of both FM and AM radio signals that can affect radio reception quality in a moving vehicle, even when the finest equipment is used. These characteristics are completely normal in a given reception area and do not indicate any malfunction in your NISSAN radio system.

Reception conditions will constantly change because of vehicle movement. Buildings, terrain, signal distance and interference from other vehicles can work against ideal reception. Described below are some of the factors that can affect your radio reception.

Some cellular phones or other devices may cause interference or a buzzing noise to come from the audio system speakers. Storing the device in a different location may reduce or eliminate the noise.

FM RADIO RECEPTION

Range: FM range is normally limited to 25 – 30 mi (40 – 48 km), with monaural (single channel) FM having slightly more range than stereo FM. External influences may sometimes interfere with FM station reception even if the FM station is within 25 mi (40 km). The strength of the FM signal is directly related to the distance between the transmitter and receiver. FM signals follow a line-of-sight path, exhibiting many of the same characteristics as light. For example, they will reflect off objects.
Fade and drift: As your vehicle moves away from a station transmitter, the signals will tend to fade and/or drift.

Static and flutter: During signal interference from buildings, large hills or due to antenna position (usually in conjunction with increased distance from the station transmitter), static or flutter can be heard. This can be reduced by adjusting the treble control to reduce treble response.

Multipath reception: Because of the reflective characteristics of FM signals, direct and reflected signals reach the receiver at the same time. The signals may cancel each other, resulting in momentary flutter or loss of sound.

AM RADIO RECEPTION

AM signals, because of their low frequency, can bend around objects and skip along the ground. In addition, the signals can be bounced off the ionosphere and bent back to earth. Because of these characteristics, AM signals are also subject to interference as they travel from transmitter to receiver.

Fading: Occurs while the vehicle is passing through freeway underpasses or in areas with many tall buildings. It can also occur for several seconds during ionospheric turbulence even in areas where no obstacles exist.

Static: Caused by thunderstorms, electrical power lines, electric signs and even traffic lights.

SATELLITE RADIO RECEPTION

When the satellite radio is used for the first time or the battery has been replaced, the satellite radio may not work properly. This is not a malfunction. Wait more than 10 minutes with satellite radio ON and the vehicle outside of any metal or large building for satellite radio to receive all of the necessary data.

No satellite radio reception is available and “NO SAT” is displayed when the SAT band option is selected unless optional satellite receiver and antenna are installed and a SiriusXM® Satellite Radio service subscription is active. Satellite radio is not available in Alaska, Hawaii and Guam.

Satellite radio performance may be affected if cargo carried on the roof blocks the satellite radio signal.

If possible, do not put cargo over the satellite antenna.

A build up of ice on the satellite radio antenna can affect satellite radio performance. Remove the ice to restore satellite radio reception.
Compact disc (CD) player

**CAUTION**

- Do not force a compact disc into the CD insert slot. This could damage the CD and/or CD player.
- Trying to load a CD with the CD door closed could damage the CD and/or CD player.
- Only one CD can be loaded into the CD player at a time.
- Only use high quality 4.7 in (12 cm) round discs that have the “COMPACT disc DIGITAL AUDIO” logo on the disc or packaging.
- During cold weather or rainy days, the player may malfunction due to the humidity. If this occurs, remove the CD and dehumidify or ventilate the player completely.
- The player may skip while driving on rough roads.
- The CD player sometimes cannot function when the compartment temperature is extremely high or low. Decrease/increase the temperature before use.
- Do not expose the CD to direct sunlight.
- CDs that are in poor condition or are dirty, scratched or covered with fingerprints may not work properly.
- The following CDs may not work properly.
  - Copy control compact discs (CCCD)
  - Recordable compact discs (CD-R)
  - Rewritable compact discs (CD-RW)
- Do not use the following CDs as they may cause the CD player to malfunction:
  - 3.1 in (8 cm) discs with an adapter
  - CDs that are not round
  - CDs with a paper label
  - CDs that are warped, scratched, or have abnormal edges
- This audio system can only play prerecorded CDs. It has no capability to record or burn CDs.
- If the CD cannot be played, one of the following messages will be displayed.
  **CHECK DISC:**
  - Confirm that the CD is inserted correctly (the label side is facing up, etc.).
  - Confirm that the CD is not bent or warped and it is free of scratches.
PRESS EJECT:
This is an error due to excessive temperature inside the player. Remove the CD by pressing the EJECT button. After a short time, reinsert the CD. The CD can be played when the temperature of the player returns to normal.

UNPLAYABLE:
The file is unplayable in this audio system (only MP3 or WMA (if so equipped) CD).

Compressed audio files (MP3/WMA)

Terms

• MP3 — MP3 is short for Moving Pictures Experts Group Audio Layer 3. MP3 is the most well-known compressed digital audio file format. This format allows for near “CD quality” sound, but at a fraction of the size of normal audio files. MP3 conversion of an audio track from CD-ROM can reduce the file size by approximately a 10:1 ratio with virtually no perceptible loss in quality. MP3 compression removes the redundant and irrelevant parts of a sound signal that the human ear doesn’t hear.

• WMA — Windows Media Audio (WMA)* is a compressed audio format created by Microsoft as an alternative to MP3. The WMA codec offers greater file compression than the MP3 codec, enabling storage of more digital audio tracks in the same amount of space when compared to MP3s at the same level of quality.

• Bit rate — Bit rate denotes the number of bits per second used by a digital music file. The size and quality of a compressed digital audio file is determined by the bit rate used when encoding the file.

• Sampling frequency — Sampling frequency is the rate at which the samples of a signal are converted from analog to digital (A/D conversion) per second.

• Multisession — Multisession is one of the methods for writing data to media. Writing data once to the media is called a single session, and writing more than once is called a multisession.

• ID3/WMA Tag — The ID3/WMA tag is the part of the encoded MP3 or WMA file that contains information about the digital music file such as song title, artist, encoding bit rate, track time duration, etc. ID3 tag information is displayed on the Artist/song title line on the display.

* Windows® and Windows Media® are registered trademarks and trademarks in the United States of America and other countries of Microsoft Corporation of the USA.
**Playback order**

Musical playback order of a CD with MP3 or WMA files is as illustrated.

- The names of folders not containing MP3 or WMA files are not shown in the display.
- If there is a file in the top level of the disc, “Root Folder” is displayed.
- The playback order is the order in which the files were written by the writing software. Therefore, the files might not play in the desired order.

## Troubleshooting guide

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Countermeasure</th>
</tr>
</thead>
</table>
| Cannot play                   | - Check if the disc was inserted correctly.  
- Check if the disc is scratched or dirty.  
- Check if there is condensation inside the player. If there is, wait until the condensation is gone (about 1 hour) before using the player.  
- If there is a temperature increase error, the CD player will play correctly after it returns to the normal temperature.  
- If there is a mixture of music CD files (CD-DA data) and MP3/WMA files on a CD, only the music CD files (CD-DA data) will be played.  
- Files with extensions other than ".MP3", ".WMA", ".mp3" or ".wma" cannot be played. In addition, the character codes and number of characters for folder names and file names should be in compliance with the specifications.  
- Check if the finalization process, such as session close and disc close, is done for the disc.  
- Check if the disc is protected by copyright. |
| Poor sound quality            | - Check if the disc is scratched or dirty.  
- Bit rate may be too low.  
- If there are many folders or file levels on the MP3/WMA disc, or if it is a multisession disc, some time may be required before the music starts playing.  
- The writing software and hardware combination might not match, or the writing speed, writing depth, writing width, etc., might not match the specifications. Try using the slowest writing speed.  
- Skipping may occur with large quantities of data, such as for high bit rate data. |
| It takes a relatively long time before the music starts playing. | - If there are many folders or file levels on the MP3/WMA disc, or if it is a multisession disc, some time may be required before the music starts playing. |
| Music cuts off or skips       | - The writing software and hardware combination might not match, or the writing speed, writing depth, writing width, etc., might not match the specifications. Try using the slowest writing speed. |
| Skipping with high bit rate files | - Skipping may occur with large quantities of data, such as for high bit rate data. |
| Moves immediately to the next song when playing | - When a non-MP3/WMA file has been given an extension of ".MP3", ".WMA", ".mp3" or ".wma", or when play is prohibited by copyright protection, there will be approximately 5 seconds of no sound and then the player will skip to the next song. |
| Songs do not play back in the desired order | - The playback order is the order in which the files were written by the writing software. Therefore, the files might not play in the desired order. |

4-48  Display screen, heater, air conditioner, audio and phone systems
USB (Universal Serial Bus) connection port

**WARNING**
Do not connect, disconnect or operate the USB device while driving. Doing so can be a distraction. If distracted you could lose control of your vehicle and cause an accident or serious injury.

**CAUTION**
- Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.
- Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.
- Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.

The vehicle is not equipped with a USB device. USB devices should be purchased separately as necessary. This system cannot be used to format USB devices. To format a USB device, use a personal computer. In some states/area, the USB device for the front seats plays only sound without images for regulatory reasons, even when the vehicle is parked.

This system supports various USB memory devices, USB hard drives and iPod® players. Some USB devices may not be supported by this system.

Partitioned USB devices may not play correctly.

Some characters used in other languages (Chinese, Japanese, etc.) may not appear properly in the display. Using English language characters with a USB device is recommended.

**General notes for USB use:**
For additional information refer to your device manufacturer's owner information regarding the proper use and care of the device.

**Notes for iPod® use:**
- iPod® is a trademark of Apple Inc., registered in the U.S. and other countries.
- Improperly plugging in the iPod® may cause a checkmark to be displayed on and off (flickering). Always make sure that the iPod® is connected properly.
- An iPod® nano (1st Generation) may remain in fast forward or rewind mode if it is connected during a seek operation. In this case, please manually reset the iPod®.
- An iPod® nano (2nd Generation) will continue to fast-forward or rewind if it is disconnected during a seek operation.
- An incorrect song title may appear when the Play Mode is changed while using an iPod® nano (2nd Generation).
- Audiobooks may not play in the same order as they appear on an iPod®.
- Large video files cause slow responses in an iPod®. The vehicle center display may momentarily black out, but will soon recover.
- If an iPod® automatically selects large video files while in the shuffle mode, the vehicle center display may momentarily black out, but will soon recover.

**Bluetooth® streaming audio**
- Some Bluetooth® audio devices may not be recognized by the in-vehicle audio system.
- It is necessary to set up the wireless connection between a compatible Bluetooth® audio device and the in-vehicle Bluetooth® module before using the Bluetooth® audio.

Display screen, heater, air conditioner, audio and phone systems   4-49
• Operating procedure of the Bluetooth® audio will vary depending on the devices. Make sure how to operate your audio device before using it with this system.

• The Bluetooth® audio may be stopped under the following conditions:
  – Receiving a call on the Hands-Free Phone System.
  – Checking the connection to the hands-free phone.

• Do not place the Bluetooth® audio device in an area surrounded by metal or far away from the in-vehicle Bluetooth® module to prevent tone quality degradation and wireless connection disruption.

• While an audio device is connected through the Bluetooth® wireless connection, the battery power of the device may discharge quicker than usual.

• This system supports the Bluetooth® Audio Distribution Profile (A2DP, AVRCP).

  Bluetooth® is a trademark owned by Bluetooth SIG, Inc. and licensed to Visteon.

12. DISP button
13. MEDIA button
14. XM button
15. FM·AM button

For additional information, refer to “Audio operation precautions” in this section.

- No satellite radio reception is available when the SAT band option is selected unless a SiriusXM® Satellite Radio subscription is active.
- The satellite radio is not available in Alaska, Hawaii and Guam.

Audio main operation

○ (Power)/VOL (Volume) control knob
Place the power switch in the ACC or ON position, and then press the ○ button while the system is off to turn on the last audio source, which was playing immediately before the system was turned off. While the system is on, pressing the ○ button turns the system off.
Turn the VOL control knob to adjust the volume.
This vehicle may be equipped with speed sensitive volume. When this feature is active, the audio volume changes as the driving speed changes.

ENTER/SETTING button
When the audio screen is displayed, press the ENTER/SETTING button to show the Settings screen on the display. Turn the TUNE/SCROLL knob to navigate the options and then press the ENTER/SETTING button to make a selection.

</tbody>
</table>

4-52 Display screen, heater, air conditioner, audio and phone systems
Bass, treble, balance and fade can also be adjusted by pressing the ENTER/SETTING button and turning the TUNE/SCROLL control knob to select the item to adjust. When the desired item is shown on the display, turn the tuning to adjust and then press the ENTER/SETTING button until the display returns to the main audio screen. If the button is not pressed for approximately 10 seconds, the radio or CD display will automatically reappear.

**DISP button**
Display of the screen can be canceled by pressing the DISP button. You can then listen to music that is being played back. If you want to display the screen again, either press the DISP button once more or press the FM•AM, XM Satellite Radio or CD•AUX button.

**MEDIA button**
Pressing the MEDIA button will switch the displays as follows:

- iPod®/USB → Bluetooth
- Audio → AUX → CD → iPod®/USB

**BACK button**
When the BACK button is pressed, it returns to the previous display.

**iPod MENU button**
Press the iPod MENU button while the iPod® is connected to show the iPod® operation menu on the audio display. Scroll through the menu list using the TUNE/SCROLL knob. Press the ENTER/SETTING button to select a menu item. For additional information, refer to the iPod® Owner’s Manual.

**FM/AM/SAT radio operation**

- **FM•AM band select**
  Pressing the radio band select button will change the band as follows:
  - AM → FM1 → FM2 → AM

- **XM band select**
  Pressing the XM band select button will change the band as follows:
  - XM1 → XM2 → XM3 → XM1
  When the XM band select button is pressed while the power switch is in the ACC or ON position, the radio will come on at the channel last played.
  The last station played will also come on when the button is pressed to radio ON.

  *When the XM button is pressed, the satellite radio mode will be skipped unless a SiriusXM® Satellite Radio service subscription is active. Satellite radio is not available in Alaska, Hawaii and Guam.

  If a compact disc is playing when the XM button is pressed, the compact disc will automatically be turned off and the last radio station played will come on.

- **TUNE/SCROLL knob (Tuning)**
  Turn the TUNE/SCROLL knob to the left or right for manual tuning.

- **SEEK tuning**
  Press the SEEK/CAT or button or to tune from low to high or high to low frequencies and to stop at the next broadcasting station.

- **SCAN tuning**
  Press the SCAN button to stop at each broadcasting station for 5 seconds. SCAN will appear on the screen while the radio is scan tuning.
  Pressing the button again during this 5 second period will stop SCAN tuning and the radio will remain tuned to that station. If the SCAN button is not pressed within 5 seconds, SCAN tuning moves to the next station.

*Display screen, heater, air conditioner, audio and phone systems* 4-53
1 to 6 Station memory operations
Six stations can be set for the AM band. Twelve stations can be set for the FM band (6 for FM1, 6 for FM2). Eighteen channels can be set for the satellite radio (6 for XM1, 6 for XM2, 6 for XM3).

1. Choose the radio band AM, FM1 or FM2 using the FM·AM select button, or choose the satellite band XM1, XM2 or XM3 using the XM button.

2. Tune to the desired station using manual, SEEK or SCAN tuning. Press and hold any of the desired station memory buttons (1 – 6) until the preset number is updated on the display and the sound is briefly muted.

3. The channel indicator will then come on and the sound will resume. Programming is now complete.

4. Other buttons can be set in the same manner. If the battery cable is disconnected, or if the fuse opens, the radio memory will be canceled. In that case, reset the desired stations.

Compact disc (CD) player operation
Place the power switch in the ACC or ON position and insert the Compact Disc (CD) into the slot with the label side facing up. The CD will be guided automatically into the slot and start playing.

After loading the CD, the number of tracks on the CD and the play time will appear on the display. If the radio is already operating, it will automatically turn off and the CD will play.

If the system has been turned off while the CD was playing, pressing the (power) button will start the CD.

Do not use 3.1 in (8 cm) discs.

SEEK/CAT buttons
When the FF or REW button is pressed for more than 1.5 seconds while the CD is being played, the CD will play while fast forwarding or rewinding. When the button is released, the CD will return to normal play speed.

When the FF or REW button is pressed for less than 1.5 seconds while the CD is being played, the next track or the beginning of the current track on the CD will be played.

Repeat (RPT)
When the RPT play button is pressed while the CD is played, the play pattern can be changed as follows:

(CD)
Normal → 1 Track Repeat

(CD with compressed audio files)
Normal → 1 Folder Repeat → 1 Track Repeat → Normal

Random (RDM)
When the RDM play button is pressed while a CD is being played, the play pattern can be changed as follows:

(CD)
Normal → 1 Disc Random

(CD with compressed audio files)
Normal → 1 Disc Random → 1 Folder Random → Normal

CD EJECT
When the CD EJECT button is pressed with a compact disc loaded, the CD will be ejected.

When this button is pressed while the CD is being played, the CD will be ejected.
If the CD comes out and is not removed, it will be pulled back into the slot to protect it.

AUX IN jack
The AUX IN jack is located under the control panel. The AUX IN audio jack accepts any standard analog audio input such as from a portable cassette tape/CD player, MP3 player or laptop computer.

MEDIA
With a CD loaded, press the MEDIA button until the CD mode is displayed on the screen. Pressing the MEDIA button repeatedly will maneuver through CD, USB, Bluetooth® Audio and AUX modes.

For additional information, refer to “NissanConnect SM Mobile Apps” in this section regarding “My Apps” key.

CD/MP3 display mode
While listening to an MP3/WMA CD, certain text may be displayed on the screen if the CD has been encoded with the text information. Depending on how the MP3/WMA CD is encoded, information such as artist, song and folder will be displayed.

The track number and total number of tracks in the current folder or on the current disc are displayed on the screen as well.

TUNE/SCROLL knob (MP#/WMA CD only)
If a MP3/WMA CD with multiple folders is playing, turn the TUNE/SCROLL knob to change folders. Turn the knob to the left to skip back a folder. Turn the knob to the right to skip ahead a folder.

Additional features
For additional information about the iPod® player available with this system, refer to “iPod® player operation (models without Navigation System)” in this section.

For additional information about the USB (Universal Serial Bus) Connection Port available with this system, refer to “USB (Universal Serial Bus) Connection Port Operation (models without Navigation System)” in this section.

For additional information about the Bluetooth® audio interface available with this system, refer to “Bluetooth® streaming audio (models without Navigation System)” in this section.

USB (UNIVERSAL SERIAL BUS) CONNECTION PORT (MODELS WITHOUT NAVIGATION SYSTEM)
Connecting a device to the USB (Universal Serial Bus) connection port

WARNING
Do not connect, disconnect or operate the USB device while driving. Doing so can be a distraction. If distracted you could lose control of your vehicle and cause an accident or serious injury.
CAUTION

- Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.
- Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.
- Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.

For additional information, refer to your device manufacturer's owner information regarding the proper use and care of the device.

The USB connection port is located in the center console. Insert the USB device into the port.

When a compatible storage device is plugged into the port, compatible audio files on the storage device can be played through the vehicle’s audio system.

Audio file operation

MEDIA button

Place the power switch in the ON or ACC position and press the MEDIA button to switch to the USB input mode. If a CD is playing or another audio source is plugged in through the AUX input jack, the MEDIA button toggles among four sources.

SEEK/CAT buttons

When the or button is pressed for more than 1.5 seconds while a USB memory is being played, the USB memory will play while fast forwarding or rewinding. When the button is released, the USB memory will return to normal play speed.

When the or button is pressed for less than 1.5 seconds while the USB memory is being played, the next track or the beginning of the current track on the USB memory will be played.

The multi-function controller can also be used to select tracks when the USB memory is being played.

REPEAT (RPT)

When the RPT button is pressed while the USB memory is being played, the play pattern can be changed as follows:

To change the play mode, press the RPT button repeatedly and the mode will change as follows:

Normal→1 Folder Repeat→1 Track Repeat→Normal

RANDOM (RDM)

When the RDM button is pressed while a USB memory device is being played, the play pattern can be changed as follows:

To change the play mode, press the RDM button repeatedly and the mode will change as follows:

Normal→All Random→1 Folder Random→Normal

TUNE/SCROLL knob

If there are multiple folders with audio files on the USB device, turn the TUNE/SCROLL knob to change folders. Turn the knob to the left to skip back a folder. Turn the knob to the right to skip ahead a folder. If there is only one folder of audio files on the USB device, turning the TUNE/SCROLL knob in either direction will return to the first track on the USB device.
When the BACK button is pressed, it returns to the previous display.

IPOD® PLAYER OPERATION
(MODELS WITHOUT NAVIGATION SYSTEM)

Connecting iPod®

WARNING
Do not connect, disconnect or operate the USB device while driving. Doing so can be a distraction. If distracted you could lose control of your vehicle and cause an accident or serious injury.

CAUTION
- Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.
- Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.
- Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.

For additional information, refer to your device manufacturer’s owner information regarding the proper use and care of the device.

To connect an iPod® to the vehicle so that the iPod® can be controlled with the audio system controls and display screen, use the USB connection port located in the center console. Connect the iPod®-specific end of the cable to the iPod® and the USB end of the cable to the USB connection port on the vehicle. If your iPod® supports charging via a USB connection, its battery will be charged while connected to the vehicle with the power switch in the ACC or ON position.

While connected to the vehicle, the iPod® can only be operated by the vehicle audio controls.

To disconnect the iPod® from the vehicle, remove the USB end of the cable from the USB connection port on the vehicle, then remove the cable from the iPod®.

iPod® is a trademark of Apple Inc, registered in the U.S. and other countries.

Compatibility
The following models are available:
- Third generation iPhone® (firmware version IOS 2.1–4.2.1)
- Fourth generation iPhone® (firmware version IOS 4.0–6.1.3)
- Fifth generation iPhone® (firmware version IOS6/6.0)
- Fifth generation iPod® (firmware version iOS6/6.0)
- First generation iPod Classic® (firmware version 1.1.1 or 2.0.1)
- Second generation iPod Classic® (Firmware version 2.0.1)
- First generation iPod touch® (Firmware version 1.1–2.2.1)
- Second generation iPod touch® (Firmware version IOS 2.1.1–2.2.1)
- Third generation iPod touch® (Firmware version IOS 3.1–3.1.3)
- Fourth generation iPod touch® (Firmware version IOS 4.1–6.1.3)
- Fifth generation iPod touch® (Firmware version IOS 6.0.0–6.1.3)
- First generation iPod nano® (Firmware version 1.3.1)
- Second generation iPod nano® (Firmware version 1.1.3)
- Third generation iPod nano® (Firmware version 1.0.0–1.1.3)
- Fourth generation iPod nano® (Firmware version 1.0.2–1.0.4)
- Fifth generation iPod nano® (Firmware version 1.0.1–1.0.2)
- Sixth generation iPod nano® (Firmware version 1.0–1.2)
- Seventh generation iPod nano® (Firmware version 1.0.0–1.0.1)

The iPod touch® may not respond quickly with the system in some cases. Make sure that the iPod® firmware is updated.

**Audio main operation**

Place the power switch in the ACC or ON position. Then, press the MEDIA button repeatedly to switch to the iPod® mode.

If the system has been turned off while the iPod® was playing, pressing the (power) button will start the iPod®.

**iPod MENU button**

Press the iPod MENU button while the iPod® operation menu on the audio display. Scroll through the menu list using the TUNE/SCROLL knob. Press the ENTER button to select a menu item. Items in the iPod® menu appear on the display in the following order:

- Now playing
- Playlists
- Artists
- Albums
- Songs
- Podcasts
- Genres
- Composers
- Audiobooks
- Shuffle songs

For additional information about each item, refer to the iPod® Owner’s Manual.

**MEDIA button**

Place the power switch in the ACC or ON position. Then, press the MEDIA button to switch to the iPod® mode.

If another audio source is playing and the iPod® is connected, pressing the MEDIA button changes to the iPod® mode.

If the system has been turned off while the iPod® was playing, pressing the (power) button will start the iPod®.

When the MEDIA button is pressed while the iPod® is connected, the interface for iPod® operation is shown on the audio display. The items on the menu list can be scrolled by turning the TUNE/SCROLL dial while the iPod® is operational. To select an item, press ENTER/SETTING. Items in the iPod® menu appear on the display in the following order:

- Now Playing
- Playlists

**Display screen, heater, air conditioner, audio and phone systems**
For additional information, refer to the iPod® Owner's Manual.

SEEK/CAT buttons

When the or button is pressed for more than 1.5 seconds while the iPod® is playing, the iPod® will play while fast forwarding or rewinding. When the button is released, the iPod® will return to the normal play speed.

When the or button is pressed for less than 1.5 seconds while the iPod® is playing, the next track or the beginning of the current track on the iPod® will be played.

REPEAT (RPT)

When the RPT play button is pressed while a track is being played, the play pattern can be changed as follows:

Repeat Off → 1 Track Repeat → All Repeat → Repeat Off

RANDOM (RDM)

When the RDM play button is pressed while a track is being played, the play pattern can be changed as follows:

Shuffle Off → Track Shuffle → Album Shuffle → Shuffle Off

BACK button

When the BACK button is pressed, it returns to the previous display.

BLUETOOTH® STREAMING AUDIO (MODELS WITHOUT NAVIGATION SYSTEM)

If you have a compatible Bluetooth® audio device that is capable of playing audio files, the device can be connected to the vehicle’s audio system so that the audio files on the device play through the vehicle’s speakers. For additional information, refer to “FM-AM-SAT radio with compact disc (CD) player” in this section.

NOTE:
For additional information regarding Bluetooth® Streaming Audio, refer to the Cellular Phone Owner’s Manual.

Connecting Bluetooth® audio

To connect your Bluetooth® audio device to the vehicle, follow the procedure below:

1. Press the ENTER/SETTING button.
2. Select “Bluetooth”.
3. Select “Add Phone”. This same screen can be accessed to remove, replace or select a different Bluetooth® device.
4. The system acknowledges the command and asks you to initiate connecting from the phone handset. The connecting procedure of the cellular phone varies according to each cellular phone model. For additional information, refer to the cellular phone’s Owner’s Manual. You can also visit www.NissanUSA.com/bluetooth for instructions on connecting NISSAN-recommended cellular phones.

Audio main operation:

To switch to the Bluetooth® audio mode, press the MEDIA button repeatedly until the
Bluetooth® audio mode is displayed on the screen. Use the vehicle audio controls or the Bluetooth® device's controls to play, pause, skip or reverse tracks.

**AUX DEVICE PLAYER OPERATION**

The AUX input jack is located in the center console. The AUX input jack accepts any standard analog audio input such as from a portable cassette tape/CD player, MP3 player or laptop computer.

NISSAN strongly recommends using a stereo mini plug when connecting your music device to the audio system. Music may not play properly when monaural cable is used.

To switch the AUX mode, press the MEDIA button until the AUX mode is selected, while the power switch is in the “ON” or “ACC” position.

**CD CARE AND CLEANING**

- Handle a CD by its edges. Do not bend the disc. Never touch the surface of the disc.
- Always place the discs in the storage case when they are not being used.
- To clean a disc, wipe the surface from the center to the outer edge using a clean, soft cloth. Do not wipe the disc using a circular motion.
- Do not use a conventional record cleaner or alcohol intended for industrial use.
- A new disc may be rough on the inner and outer edges. Remove the rough edges by rubbing the inner and outer edges with the side of a pen or pencil as illustrated.

4-60  Display screen, heater, air conditioner, audio and phone systems
These modes are only available when compatible media storage is inserted into the device or connected to the system.

Volume control switch
Push the volume control switch to increase or decrease the volume.

Tuning switch
While the display is showing an audio screen, tilt the tuning switch upward or downward to select a station, track, CD or folder. For most audio sources, tilting the switch up/down for more than 1.5 seconds provides a different function than a tilting up/down for less than 1.5 seconds.

AM and FM:
- Tilt up/down for less than 1.5 seconds to increase or decrease the preset station.
- Tilt up/down for more than 1.5 seconds to seek up or down to the next station.

XM:
- Tilt up/down for less than 1.5 seconds to increase or decrease the preset station.
- Tilt up/down for more than 1.5 seconds to go to the next or previous category.

iPod®:
- Tilt up/down for less than 1.5 seconds to increase or decrease the track number.

CD:
- Tilt up/down for less than 1.5 seconds to increase or decrease the track number.
- Tilt up/down for more than 1.5 seconds to increase or decrease the folder number (if playing compressed audio files).

USB:
- Tilt up/down for less than 1.5 seconds to increase or decrease the track number.
- Tilt up/down for more than 1.5 seconds to increase or decrease the folder number.

ANTENNA
Removing antenna
The antenna cannot be shortened, but can be removed. When you need to remove the antenna, turn the antenna rod counterclockwise.

To install the antenna rod, turn the antenna rod clockwise and hand tighten.

CAUTION
- To avoid damaging or deforming the antenna, be sure to remove the antenna under the following conditions.
– The vehicle enters an automatic car wash.
– The vehicle enters a garage with a low ceiling.
– The vehicle is covered with a car cover.
• Always properly tighten the antenna rod during installation. Otherwise, the antenna rod may break during vehicle operation.

• If you must make a call while your vehicle is in motion, the hands free cellular phone operational mode is highly recommended. Exercise extreme caution at all times so full attention may be given to vehicle operation.
• If you are unable to devote full attention to vehicle operation while talking on the phone, pull off the road to a safe location and stop your vehicle.

CAR PHONE OR CB RADIO

When installing a CB, ham radio or car phone in your vehicle, be sure to observe the following precautions; otherwise, the new equipment may adversely affect the EV control system and other electronic parts.

A cellular phone should not be used for any purpose while driving so full attention may be given to vehicle operation. Some jurisdictions prohibit the use of cellular phones while driving.

CAUTION
• Keep the antenna as far away as possible from the electronic control modules.
• Keep the antenna wire more than 20 cm (8 in) away from the electronic control system harnesses. Do not route the antenna wire next to any harness.
• Adjust the antenna standing-wave ratio as recommended by the manufacturer.
• Connect the ground wire from the CB radio chassis to the body.
• For additional information, it is recommended that you visit a NISSAN certified LEAF dealer.

BLUETOOTH® HANDS-FREE PHONE SYSTEM WITHOUT NAVIGATION SYSTEM (IF SO EQUIPPED)

WARNING
• Use a phone after stopping your vehicle in a safe location. If you have to use a phone while driving, exercise extreme caution at all times so full attention may be given to vehicle operation.
• If you are unable to devote full attention to vehicle operation while talking on the phone, pull off the road to a safe location and stop your vehicle.

CAUTION
To avoid draining the vehicle battery, use a phone after the READY to drive indicator light is on.
Your NISSAN is equipped with the Bluetooth® Hands-Free Phone System. If you have a compatible Bluetooth® enabled cellular phone, you can set up the wireless connection between your cellular phone and the in-vehicle phone module. With Bluetooth® wireless technology, you can make or receive a hands-free telephone call with your cellular phone in the vehicle.

Once your cellular phone is connected to the in-vehicle phone module, no other phone connecting procedure is required. Your phone is automatically connected with the in-vehicle phone module when the power switch is placed in the ON position with the previously connected cellular phone turned on and carried in the vehicle.

NOTE:
Some devices require the user to accept specific connections for certain features (such as phonebook download). If your phone does not connect automatically to the system, consult the phone’s Owner’s Manual for details on device operation.

You can connect up to five different Bluetooth® cellular phones to the in-vehicle phone module. However, you can talk on only one cellular phone at a time.

Before using the Bluetooth® Hands-Free Phone System, refer to the following notes:
• Set up the wireless connection between a compatible cellular phone and the in-vehicle phone module before using the hands-free phone system.
• Some Bluetooth® enabled cellular phones may not be recognized or work properly. Please visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for a recommended phone list and connecting instructions.
• You will not be able to use a hands-free phone under the following conditions:
  – Your vehicle is outside of the cellular service area.
  – Your vehicle is in an area where it is difficult to receive a cellular signal; such as in a tunnel, in an underground parking garage, near a tall building or in a mountainous area.
  – Your cellular phone is locked to prevent it from being dialed.
• When the radio wave condition is not ideal or ambient sound is too loud, it may be difficult to hear the other person’s voice during a call.
• Do not place the cellular phone in an area surrounded by metal or far away from the in-vehicle phone module to prevent tone quality degradation and wireless connection disruption.
• While a cellular phone is connected through the Bluetooth® wireless connection, the battery power of the cellular phone may discharge quicker than usual. The Bluetooth® Hands-Free Phone System cannot charge cellular phones.
• For additional information, refer to “Troubleshooting guide” in this section. You can also visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for troubleshooting help if the hands-free phone system seems to be malfunctioning.
• Some cellular phones or other devices may cause interference or a buzzing noise to come from the audio system speakers. Storing the device in a different location may reduce or eliminate the noise.
• For additional information, refer to the cellular phone Owner’s Manual regarding the telephone charges, cellular phone antenna and body, etc.

REGULATORY INFORMATION
FCC Regulatory information
CAUTION: To maintain compliance with FCC’s RF exposure guidelines, use only the supplied antenna. Unauthorized antenna, modification, or attachments could damage the transmitter and may violate FCC regulations.
Operation is subject to the following two conditions:
1. This device may not cause interference and
2. this device must accept any interference, including interference that may cause undesired operation of the device.

IC Regulatory information
• Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

USING THE SYSTEM
The NISSAN Voice Recognition system allows hands-free operation of the Bluetooth® Hands-Free Phone System.
If the vehicle is in motion, some commands may not be available so full attention may be given to vehicle operation.

Initialization
When the power switch is placed in the ON position, NISSAN Voice Recognition is initialized, which takes a few seconds. If the START button is pressed before the initialization completes, the
system will announce “Hands-free phone system not ready” and will not react to voice commands.

Operating tips
To get the best performance out of the NISSAN Voice Recognition system, observe the following:
• Keep the interior of the vehicle as quiet as possible. Point all vents away from the microphone area and close the windows to eliminate surrounding noises (traffic noises, vibration sounds, etc.), which may prevent the system from recognizing voice commands correctly.
• Wait until the tone sounds before speaking a command. Otherwise, the command will not be received properly.
• Start speaking a command within 5 seconds after the tone sounds.
• Speak in a natural voice without pausing between words.

Giving voice commands
To operate NISSAN Voice Recognition, press and release the button located on the steering wheel. After the tone sounds, speak a command.

The command given is picked up by the microphone, and voice feedback is given when the command is accepted.
• If you need to hear the available commands for the current menu again, say “Help” and the system will repeat them.
• If a command is not recognized, the system announces, “Command not recognized. Please try again.” Make sure the command is said exactly as prompted by the system and repeat the command in a clear voice.
• If you want to go back to the previous command, you can say “Go back” or “Correction” any time the system is waiting for a response.
• You can cancel a command when the system is waiting for a response by saying, “Cancel” or “Quit.” The system announces “Cancel” and ends the Voice Recognition session. You can also press and hold the button on the steering wheel for 5 seconds at any time to end the Voice Recognition session. Whenever the Voice Recognition session is canceled, a double beep is played to indicate you have exited the system.
• If you want to adjust the volume of the voice feedback, press the volume control switches (+ or -) on the steering wheel while being provided with feedback. You can also use the radio volume control knob.

Voice Prompt Interrupt
In most cases you can interrupt the voice feedback to speak the next command by pressing the button on the steering wheel. After interrupting the system, wait for a beep before speaking your command.

One Shot Call
To use the system faster, you may speak the second level commands with the main menu command on the main menu. For example, press the button and after the tone say “Call Redial”.

Display screen, heater, air conditioner, audio and phone systems 4-65
CONTROL BUTTONS

The control buttons for the Bluetooth® Hands-Free Phone System are located on the steering wheel.

1. Phone/send button
2. Phone/end button
3. Tuning switch

Phone/send

Press the button to initiate a Voice Recognition session or answer an incoming call.

You can also use the button to interrupt the system feedback and give a command at once. For additional information, refer to “Voice commands” and “During a call” in this section.

Phone/end

While the Voice Recognition system is active, press and hold the button for 5 seconds to quit the Voice Recognition system at any time.

Tuning switch

While using the Voice Recognition system, tilt the tuning switch up or down to manually control the phone system.
CONNECTING PROCEDURE

NOTE: The connecting procedure must be performed when the vehicle is stationary. If the vehicle starts moving during the procedure, the procedure will be canceled.

1. Press the ENTER/SETTING button.
2. Use the TUNE/SCROLL knob to select “Bluetooth” and then press the ENTER/SETTING button.
Menu Item | Result
--- | ---
Bluetooth ON/OFF | Allows user to switch Bluetooth® on and off. Bluetooth® must be turned on in order to connect device.
On | Turns Bluetooth® functionality on.
Off | Turns Bluetooth® functionality off.
Add Phone or Device | Upon pressing this button, a message with a PIN appears on the screen. Operate the Bluetooth® phone to enter the PIN and complete the connection process.
Replace Phone | Replace the phone currently connected to the system. This option allows the user to keep any voicetags that were recorded using the previous phone if vehicle is equipped with voice recognition.

The connecting procedure varies according to each phone. For additional information, refer to the phone’s Owner’s Manual. You can also visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth or call the NISSAN Consumer Affairs Department for instructions on connecting recommended cellular phones.

VOICE COMMANDS

Voice commands can be used to operate the Bluetooth® Hands-Free Phone System. Press the button and say “Phone” to bring up the phone command menu. The available options are:

• Call
• Phonebook
• Recent Calls
• Messaging (if so equipped)

• Show Applications (if so equipped)
• Select Phone or Device
  “Call”
For additional information, refer to “Making a call” in this section.

“Phonebook”
The following commands are available under “Phonebook”:

• (a name)
Say a name in the phonebook to bring up a list of options for a list of options for that phonebook entry. The system will say the name it interpreted based on the voice command provided. If the name is incorrect, say “Correction” to hear another name.

Once the correct phonebook entry is identified, say “Dial” to dial the number or “Send Text” to send a text message to that number. Say “Record Name” to record a name for the phonebook entry. Say “Delete Recording” to delete a recorded name for the phonebook entry.

• List Names
Speak this command to have the system list the names in the phonebook one by one alphabetically. Say “Dial” to dial the number of the current name or “Send Text” to send a text message to that number. Say “Next Entry”, “Previous Entry” or Help to move through the list alphabetically. Say “Record Name” to record a name for the current phonebook entry. Say “Delete Recording” to delete a recorded name for the current phonebook entry.
“Recent Calls”
The following commands are available under “Recent Calls”:

- **Incoming**
  Speak this command to list the last five incoming calls to the vehicle. If the call is from an entry in the phonebook, the name will be displayed. Otherwise, the phone number of the incoming call will be displayed.
  Say “Dial” to call the number or “Send Text” to send a text message to that number. Say “Next Entry”, “Previous Entry” or Help to move through the list of incoming calls.

- **Missed**
  Speak this command to list the last five missed calls to the vehicle. If the call is from an entry in the phonebook, the name will be displayed. Otherwise, the phone number of the missed call will be displayed.
  Say “Dial” to call the number or “Send Text” to send a text message to that number. Say “Next Entry”, “Previous Entry” or Help to move through the list of missed calls.

- **Outgoing**
  Speak this command to list the last five outgoing calls from the vehicle. If the call was to an entry in the phonebook, the name will be displayed. Otherwise, the phone number of the outgoing call will be displayed.
  Say “Dial” to call the number or “Send Text” to send a text message to that number. Say “Next Entry”, “Previous Entry” or Help to move through the list of outgoing calls.

- **Redial**
  Speak this command to call the last number dialed.

- **Call back**
  Speak this command to call the number of the last incoming call to the vehicle.

“Messaging” (if so equipped)
Speak this command to access text messaging functions. For additional information, refer to “Text messaging” in this section.

“Show Applications (if so equipped)”
Speak this command to display list of smartphone apps available.

“Select Phone or Device”
Speak this command to select a phone to use from a list of those phones connected to the vehicle.

**MAKING A CALL**
To make a call from a phone connected to the vehicle’s Bluetooth® Hands-Free Phone System:

1. Press the button.
2. The system will prompt you for a command. Say “Call”.
3. Select on of the available voice commands to continue:
   - “(a name)” — Speak the name of a phonebook entry to place a call to that entry. The system will respond with the name it interpreted from your command and will prompt you to confirm that the name is correct. Say “Yes” to initiate the call or “No” to hear another name from the phonebook.
   - “Number” — Speak this command to place a call by inputting numbers.
   - For 7- and 10-digit phone numbers, speak the numbers. When finished, say “Dial” to initiate the call. Say “Correction” at any time
in the process to correct a misspoken or misinterpreted number.

• For phone numbers with more digits or special characters, say “Special Number”, then speak the digits. Up to 24 digits can be entered. Available special characters are “star”, “pound”, “plus” and “pause”. When finished, say “Dial” to initiate the call. Say “Correction” at any time in the process to correct a misspoken or misinterpreted number or character.

• “Redial” — Speak this command to dial the number of the last outgoing call. The system will display “Redialing <name/number>”. The name of the phonebook entry will be displayed if it available, otherwise the number being redialed will be displayed.

• “Call Back” — Speak this command to dial the number of the last incoming call. The system will display “Calling back <name/number>”. The name of the phonebook entry will be displayed if it available, otherwise the number being called back will be displayed.

RECEIVING A CALL
When a call is received by the phone connected to the vehicle’s Bluetooth® Hands-Free Phone System, the call information is displayed on the control panel display.

Press the button to accept the call. Press the button to reject the call.

DURING A CALL
When a call is active, press the button to access additional options. Speak one of the following commands.

• “Send” — Speak this command followed by the digits to enter digits during the phone call.

• “Mute On” or “Mute Off” — Speak the command to mute or unmute the system.

• “Transfer Call” — Speak this command to transfer the call to the handset. To transfer the call back from the handset to the Bluetooth® Hands-Free Phone System, press the button and confirm when prompted.

If supported by the phone, the Bluetooth® Hands-Free Phone System allows for call waiting functionality. If a call is received while another call is already active, a message will be displayed on the screen. Press the button to hold the active call and switch to the second call. Press the button to reject the second call.

While the second call is active, pressing the button will allow the same commands that are available during any calls as well as two additional commands:

• “Switch Call” — Speak this command to hold the second call and switch back to the original call.

• “End Other Call” — Speak this command to stay with the second call and end the original call.

Press the button to accept the call. Press the button to reject the call.

ENDING A CALL
To end an active call, press the button.
TEXT MESSAGING (IF SO EQUIPPED)

WARNING

- Laws in some jurisdictions may restrict the use of “Text-to-Speech”. Check local regulations before using this feature.
- Laws in some jurisdictions may restrict the use of some of the applications and features, such as social networking and texting. Check local regulations for any requirements.
- Use the text messaging feature after stopping your vehicle in a safe location. If you have to use the feature while driving, exercise extreme caution at all times so full attention may be given to vehicle operation.
- If you are unable to devote full attention to vehicle operation while using the text messaging feature, pull off the road to a safe location and stop your vehicle.

NOTE:
Many phones may require special permission to enable text messaging. Check the phone’s screen during Bluetooth® pairing. For some phones, you may need to enable ‘Notifications’ in the phone’s Bluetooth® menu for text messages to appear on the headunit. Please consult your phone’s Owner’s manual. Text message integration requires that the phone support MAP (Message Access Profile) for both receiving and sending text messages. Some phones may not support all text messaging features. For additional information about compatibility, please visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth, as well as your device’s Owner’s manual.

The system allows for the sending and receiving of text messages through the vehicle interface.

Sending a text message:
1. Press the \button on the steering wheel.
2. Say “Phone” after the tone.
3. Say “Send Text” after the tone.
4. The system will provide a list of available commands in order to determine the recipient of the text message. Choose from the following:
   - (a name)
   - Missed Calls
   - Incoming Calls
   - Outgoing Calls

For additional information, refer to “Voice commands” in this section.

5. Once a recipient is chosen, the system prompts for which message to send. Five predefined messages are available as well as three custom messages. To choose one of the predefined messages, speak one of the following after the tone:
   - “Driving, can’t text”
   - “Call me”
   - “On my way”
   - “Running late”
   - “Custom message”

To send one of the custom messages, say “Custom Messages”. If more than one custom message is stored, the system will prompt for the number of the desired custom message.
For additional information on setting and managing custom text messages, refer to “Bluetooth® settings” in this section.

**Reading a received text message:**
1. Press the button on the steering wheel.
2. Say “Messaging” after the tone.
3. Say “Read Text” after the tone.

The text message, sender and delivery time are shown on the screen. Use the tuning switch to scroll through all text messages if more than one are available. Press the button to exit the text message screen. Press the button to access the following options for replying to the text message:

- **Call Back**
  Speak this command to call the sender of the text message using the Bluetooth® Hands-Free Phone System.

- **Send Text**
  Speak this command to send a text message response to the sender of the text message.

- **Read Text**
  Speak this command to read the text message again.

- **Previous Text**
  Speak this command to move to the previous text message.

- **Next Text**
  Speak this command to move to the next text message.

**NOTE:**
Text messages are only displayed if the vehicle speed is less than 5 mph (8 km/h).

---

**Setting Bluetooth**

<table>

<td></td>
</tr>
</tbody>
</table>

**BLUETOOTH® SETTINGS**

To access and adjust the settings for the Bluetooth® Hands-Free Phone System:
1. Press the ENTER/SETTING button.
2. Use the TUNE/SCROLL knob to select “Bluetooth®” and then press the ENTER/SETTING button:

- **Bluetooth**
  Select “On” or “Off” to turn the vehicle’s Bluetooth® system on or off.
• Add Phone or Device
  For additional information, refer to “Connecting procedure” in this section.
• Delete Phone or Device
  Select to delete a phone from the displayed list. The system will ask to confirm before deleting the phone.
• Replace Phone
  Select to replace a phone from the displayed list. When a selection is made, the system will ask to confirm before proceeding. The recorded phonebook for the phone being deleted will be saved as long as the new phone’s phonebook is the same as the old phone’s phonebook.
• Select Phone or Device
  Select to connect to a previously connected phone from the displayed list.
• Phonebook Download
  Select to turn on or off the automatic download of a connected phone’s phonebook.
• Show Incoming Calls
  Select “Driver Only” to have incoming call information displayed only in the vehicle information display. Select “Both” to have incoming call information displayed in both the vehicle information display and the center display screen.
• Text Message (if so equipped)
  Select to adjust the volume of the sound that plays when a new text is received by a phone connected to the Bluetooth® Hands-Free Phone System. The setting all the way to the left indicates that the new text sound will be muted.
• Show Incoming Text
  Select “Driver Only” to have incoming text messages displayed only in the vehicle information display. Select “Both” to have incoming text messages displayed in both the vehicle information display and the center display screen. Select “None” to have no display of incoming text messages.
• Edit Custom Messages
  Select to set a custom message that will be available with the standard options when sending a text message. To set a custom message, send a text message to your own phone number while the phone is connected to the system. Three custom messages can be set. Custom messages can only be set while the vehicle is stationary.
• Auto Reply
  Select to turn on or off the Auto Reply function. When enabled, the vehicle will automatically send a predefined text message to the sender when a text message is received while driving.
• Auto Reply Message
  Select to choose the message that is sent when the Auto Reply function is enabled. Choose from “I’m Driving” or one of the three custom messages stored in the system.
• Vehicle Signature On/Off
  Select to choose whether or not the vehicle signature is added to outgoing text messages from the vehicle. This message cannot be changed or customized.

MANUAL CONTROLS
While using the Voice Recognition system, it is possible to select menu options by using the steering wheel controls instead of speaking voice commands. This can be especially helpful if the
noise of driving makes it difficult for Voice Recognition system to accurately interpret commands. The manual control mode does not allow dialing a phone number by digits. The user may select an entry from the Phonebook or Recent Calls lists. To re-activate Voice Recognition, exit the manual control mode by pressing and holding the PHONE/END ( ) button. At the time, pressing the PHONE/SEND ( ) button will start the Hands Free Phone System.

Operating tips
• To enter manual control mode, start the Voice Recognition system and tilt the tuning ( ) switch up or down. The system will speak “Showing Manual Options” when manual controls are initially activated.
• To browse the menu options, tilt the tuning ( ) switch up or down. The system will always speak the current menu option. Depending on the audio display, it will also show the current menu option.
• To select the current menu option, press the PHONE/SEND ( ) button.
• To go back to the previous menu, press the PHONE/END ( ) button. If the current menu is the Main Menu, pressing the PHONE/END ( ) button will exit the Phone system.
• To exit the manual control mode, press and hold the PHONE/END ( ) button for 5 seconds.

TROUBLESHOOTING GUIDE
The system should respond correctly to all voice commands without difficulty. If problems are encountered, try the following solutions.
Where the solutions are listed by number, try each solution in turn, starting with number 1, until the problem is resolved.

4-74  Display screen, heater, air conditioner, audio and phone systems
<table>
<thead>
<tr>
<th>Symptom</th>
<th>Solution</th>
</tr>
</thead>
</table>
| System fails to interrupt the command correctly. | 1. Ensure that the command is valid. For additional information, refer to “Voice commands” in this section.  
2. Ensure that the command is spoken after the tone.  
3. Speak clearly without pausing between words and at a level appropriate to the ambient noise level in the vehicle.  
4. Ensure that the ambient noise level is not excessive (for example, windows open or defroster on). NOTE: if it is too noisy to use the phone, it is likely that the voice commands will not be recognized.  
5. If more than one command was said at a time, try saying the commands separately.  
6. If the system consistently fails to recognize commands, the voice training procedure should be carried out to improve the recognition response for the speaker. |
| The system consistently selects the wrong entry from the phone book. | 1. Ensure that the phone book entry name requested matches what was originally stored. This can be confirmed by using the “List Names” command. For additional information, refer to “Phonebook” in this section.  
2. Replace one of the names being confused with a new name.  
3. Say First Name and Last Name of the desired contact to improve recognition. |
For additional information, refer to the separate LEAF Navigation System Owner's Manual.

WARNING

- Do not leave children or adults who would normally require the support of others alone in your vehicle. Pets should not be left alone either. They could accidentally injure themselves or others through inadvertent operation of the vehicle. Also, on hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
- Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

TIRE PRESSURE MONITORING SYSTEM (TPMS)

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a Tire Pressure Monitoring System (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces power efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

Additional information
- The TPMS will activate only when the vehicle is driven at speeds above 16 mph (25 km/h). Also, this system may not detect a sudden drop in tire pressure (for example, a flat tire while driving).
- The low tire pressure warning light does not automatically turn off when the tire pressure is adjusted. After the tire is inflated to the recommended pressure, the vehicle must be driven at speeds above 16 mph (25 km/h) to active the TPMS and turn off the low tire pressure warning.
light. Use a tire pressure gauge to check the tire pressure.

- The CHECK TIRE PRESSURE warning also appears on the vehicle information display when the low tire pressure warning light is illuminated and low tire pressure is detected. The CHECK TIRE PRESSURE warning turns off when the low tire pressure warning light turns off.
- The CHECK TIRE PRESSURE warning appears each time the power switch is placed in the ON position as long as the low tire pressure warning light remains illuminated.
- The CHECK TIRE PRESSURE warning does not appear if the low tire pressure warning light illuminates to indicate a TPMS malfunction.
- The pressure of all tires can also be checked on the display screen. The order of the tire pressure figures displayed on the screen does not correspond with the actual order of the tire position.

For additional information, refer to “Low tire pressure warning light” in the “Instruments and controls” section and “Tire Pressure Monitoring System (TPMS)” in the “In case of emergency” section of this manual.

**WARNING**

- Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
- If the low tire pressure warning light illuminates while driving, avoid sudden steering maneuvers or abrupt braking, reduce vehicle speed, pull off the road to a safe location and stop the vehicle as soon as possible. Driving with under-inflated tires may permanently damage the tires and increase the likelihood of tire failure. Serious vehicle damage could occur and may lead to an accident and could result in serious personal injury. Check the tire pressure for all four tires. Adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label to turn the low tire pressure warning light OFF. If the tire is flat, repair it as soon as possible. (For additional information, refer to “Flat tire” in the “In case of emergency” section of this manual.)
- When replacing a wheel without the TPMS such as the spare tire, TPMS will not function and the low tire pressure warning light will flash for approximately 1 minute. The light will remain on after 1 minute. Have your tires replaced and/or TPMS system reset as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
- Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.
- Do not inject any tire liquid or aerosol tire sealant into the tires, as this may cause a malfunction of the tire pressure sensors.
CAUTION

- The TPMS may not function properly when the wheels are equipped with tire chains or the wheels are buried in snow.
- Do not place metalized film or any metal parts (antenna, etc.) on the windows. This may cause poor reception of the signals from the tire pressure sensors, and the TPMS will not function properly.

Some devices and transmitters may temporarily interfere with the operation of the TPMS and cause the low tire pressure warning light to illuminate. Some examples are:
- Facilities or electric devices using similar radio frequencies that are near the vehicle.
- If a transmitter set to similar frequencies is being used in or near the vehicle.
- If a computer (or similar equipment) or a DC/AC converter is being used in or near the vehicle.
- The low tire pressure warning light may illuminate in the following cases:
  - If the vehicle is equipped with a wheel and tire without TPMS.
  - If the TPMS has been replaced and the ID has not been registered.

FCC Notice:

For USA:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

For Canada:
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

TPMS with Easy-Fill Tire Alert

When tire pressure is low, the low tire pressure warning light illuminates.

This vehicle provides visual and audible signals to help you inflate the tires to the recommended COLD tire pressure.

Vehicle set-up:
1. Park the vehicle in a safe and level place.
2. Apply the parking brake and push the P (Park) position switch on the shift lever.
3. Place the power switch in the ON position. Do not place in the READY to drive mode.

Operation:
1. Add air to the tire.
2. After a few seconds, the hazard indicators will start flashing.
3. When the designated pressure is reached, the horn beeps once and the hazard indicators stop flashing.
4. Perform the above steps for each tire.
   - If the tire is over-inflated more than approximately 4 psi (30 kPa), the horn beeps and the hazard indicators flash three times. To correct the pressure, push the core of the valve stem on the tire briefly to release pressure. When the
pressure reaches the designated pressure, the horn beeps once.

• If the hazard indicator does not flash within approximately 15 seconds after starting to inflate the tire, it indicates that the Easy-Fill Tire Alert is not operating.

• The TPMS will not activate the Easy-Fill Tire Alert under the following conditions:
  – If there is interference from an external device or transmitter.
  – The air pressure from the inflation device is not sufficient to inflate the tire, such as those using a power socket.
  – If electrical equipment is being used in or near the vehicle.
  – There is a malfunction in the TPMS system.
  – There is a malfunction in the horn or hazard indicators.
  – If the Easy-Fill Tire Alert does not operate due to TPMS interference, move the vehicle about 3 ft (1 m) backward or forward and try again.

If the Easy-Fill Tire Alert is not working, use a tire pressure gauge.

AVOIDING COLLISION AND ROLLOVER

**WARNING**

Be alert and drive defensively at all times. Obey all traffic regulations. Avoid excessive speed, high speed cornering, or sudden steering maneuvers, because these driving practices could cause you to lose control of your vehicle. **As with any vehicle, a loss of control could result in a collision with other vehicles or objects, or cause the vehicle to rollover, particularly if the loss of control causes the vehicle to slide sideways.** Be attentive at all times, and avoid driving when tired. Never drive when under the influence of alcohol or drugs (including prescription or over-the-counter drugs which may cause drowsiness). Always wear your seat belt as outlined in “Seat belts” in the “Safety — Seats, seat belts and supplemental restraint system” section of this manual, and also instruct your passengers to do so.

Seat belts help reduce the risk of injury in collisions and rollovers. **In a rollover crash, an unbelted or improperly belted person is significantly more likely to be injured or killed than a person properly wearing a seat belt.**

OFF-ROAD RECOVERY

While driving, the right side or left side wheels may unintentionally leave the road surface. If this occurs, maintain control of the vehicle by following the procedure below. Please note that this procedure is only a general guide. The vehicle must be driven as appropriate based on the conditions of the vehicle, road and traffic.

1. Remain calm and do not overreact.
2. Do not apply the brakes.
3. Maintain a firm grip on the steering wheel with both hands and try to hold a straight course.
4. When appropriate, slowly release the accelerator pedal to gradually slow the vehicle.
5. If there is nothing in the way, steer the vehicle to follow the road while the vehicle speed is reduced. Do not attempt to drive the vehicle back onto the road surface until vehicle speed is reduced.

Starting and driving 5-5
6. When it is safe to do so, gradually turn the steering wheel until both tires return to the road surface. When all tires are on the road surface, steer the vehicle to stay in the appropriate driving lane.

- If you decide that it is not safe to return the vehicle to the road surface based on vehicle, road or traffic conditions, gradually slow the vehicle to a stop in a safe place off the road.

RAPID AIR PRESSURE LOSS

Rapid air pressure loss or a “blow-out” can occur if the tire is punctured or is damaged due to hitting a curb or pothole. Rapid air pressure loss can also be caused by driving on under-inflated tires.

Rapid air pressure loss can affect the handling and stability of the vehicle, especially at highway speeds.

Help prevent rapid air pressure loss by maintaining the correct air pressure and visually inspecting the tires for wear and damage. For additional information, refer to “Wheels and tires” in the “Maintenance and do-it-yourself” section of this manual.

If a tire rapidly loses air pressure or “blows-out” while driving, maintain control of the vehicle by following the procedure below. Please note that this procedure is only a general guide. The vehicle must be driven as appropriate based on the conditions of the vehicle, road and traffic.

**WARNING**

The following actions can increase the chance of losing control of the vehicle if there is a sudden loss of tire air pressure. Losing control of the vehicle may cause a collision and result in personal injury.

- The vehicle generally moves or pulls in the direction of the flat tire.
- Do not rapidly apply the brakes.
- Do not rapidly release the accelerator pedal.
- Do not rapidly turn the steering wheel.

1. Remain calm and do not overreact.
2. Maintain a firm grip on the steering wheel with both hands and try to hold a straight course.
3. When appropriate, slowly release the accelerator pedal to gradually slow the vehicle.
4. Gradually steer the vehicle to a safe location off the road and away from traffic if possible.
5. Lightly apply the brake pedal to gradually stop the vehicle.
6. Turn on the hazard warning flashers and contact a roadside emergency service to change the tire. For additional information, refer to “Flat tire” in the “In case of emergency” section of this manual.

DRINKING ALCOHOL/DRUGS AND DRIVING

**WARNING**

Never drive under the influence of alcohol or drugs. Alcohol in the bloodstream reduces coordination, delays reaction time and impairs judgement. Driving after drinking alcohol increases the likelihood of being involved in an accident injuring yourself and others. Additionally, if you are injured in an accident, alcohol can increase the severity of the injury.

NISSAN is committed to safe driving. However, you must choose not to drive under the influence of alcohol. Every year thousands of people are injured or killed in alcohol-related accidents. Although the local laws vary on what is considered to be legally intoxicated, the fact is that alcohol
affects all people differently and most people underestimate the effects of alcohol.

Remember, drinking and driving don’t mix! That is true for drugs too (over-the-counter, prescription, and illegal drugs). Do not drive if your ability to operate your vehicle is impaired by alcohol, drugs, or some other physical condition.

PUSH-BUTTON POWER SWITCH

WARNING

Do not operate the power switch while driving the vehicle except in an emergency. (The EV system shuts down when the power switch is pushed 3 consecutive times or the power switch is pushed and held for more than 2 seconds.) If the EV system stops while the vehicle is being driven, this could lead to a crash and serious injury.

Before operating the power switch, make sure the vehicle is in the P (Park) position.

NISSAN INTELLIGENT KEY®
SYSTEM

The Intelligent Key system allows the driver to start the EV system without taking the key out of the pocket or purse. The operating environment and/or conditions may affect Intelligent Key system operation.

Some indicators and warnings for operation are displayed on the vehicle information display in the lower display. For additional information, refer to “Vehicle information display” in the “Instruments and controls” section of this manual.

CAUTION

• Be sure to carry the Intelligent Key with you when operating the vehicle.
• Never leave the Intelligent Key inside the vehicle when you leave the vehicle.
OPERATING RANGE FOR EV START FUNCTION

The Intelligent Key function can only be used for starting the EV system when the Intelligent Key is within the specified operating range ①.

When the Intelligent Key battery is almost discharged or strong radio waves are present near the operating location, the Intelligent Key system’s operating range becomes narrower and it may not function properly.

If the Intelligent Key is within the operating range, it is possible for anyone, even someone who does not carry the Intelligent Key, to push the power switch to start the EV system.
- The cargo area is not included in the operating range but the Intelligent Key may function.
- If the Intelligent Key is placed on the instrument panel, inside the glove box or door pocket, the Intelligent Key may not function.
- If the Intelligent Key is placed near a door or window outside the vehicle, the Intelligent Key may not function.

POWER SWITCH OPERATION

When the power switch is pushed without depressing the brake pedal, the power switch position will change as follows.
- Push once to change to ACC.
- Push two times to change to ON.
- Push three times to change to OFF.
- Push four times to return to ACC.
- Open or close any door to return to LOCK while in the OFF position.

The indicator light ① on the power switch illuminates when the power switch is in the ACC or ON position.

The power lock is designed so that the power switch position cannot be switched to LOCK until the vehicle is placed in the P (Park) position.

When the power switch cannot be placed in the LOCK position, proceed as follows.
1. Push the P (Park) position switch on the shift lever to place the vehicle in the P (Park) position.
2. Push the power switch to the OFF position. The power switch position indicator ① will not illuminate.
3. Open the door. The power switch will change to the LOCK position.

POWER SWITCH POSITIONS
LOCK (Normal parking position)
The power switch can only be locked in this position.
The power switch will be unlocked when it is pushed to the ACC position while the driver is carrying the Intelligent Key.

ACC (Accessories)
This position activates electrical accessories, such as the radio, when the EV system is off.

ON
This position turns on the EV system and electrical accessories.

READY (Normal operating position)
This position turns on the EV system and electrical accessories and the vehicle can be driven.

OFF
This position turns off the EV system.

*Push while the brake pedal is depressed.
The power switch cannot be placed in the LOCK position until the vehicle is in the P (Park) position.

**CAUTION**

Do not leave the vehicle with the power switch in the ACC position for an extended period of time. This can discharge the 12-volt battery.

**NOTE:**
If the power switch is pushed quickly or is pushed twice quickly, the switch may not function even if a chime sound is heard. Push the switch again more slowly.

**EMERGENCY EV SHUT OFF**

To shut off the EV system in an emergency situation while driving, perform the following procedure:

- Rapidly push the power switch three consecutive times in less than 1.5 seconds, or
- Push and hold the power switch for more than 2 seconds.

NISSAN INTELLIGENT KEY®

**BATTERY DISCHARGE**

If the Intelligent Key battery is discharged, or environmental conditions interfere with the Intelligent Key operation, start the EV system in the READY to drive mode according to the following procedure:

1. Push the P (Park) position switch on the shift lever.
2. Firmly apply the foot brake.
3. Touch the power switch with the Intelligent Key as illustrated. (A chime will sound.)
4. Push the power switch while depressing the brake pedal within 10 seconds after the chime sounds. The power switch position changes to the READY to drive mode.

After step 3 is performed, if the power switch is pushed without depressing the brake pedal, the power switch position will change to ACC.

**NOTE:**

- When the power switch is pushed to the ACC or ON position or READY to drive mode by the above procedure, the EV system operation for discharged Intelligent Key system indicator appears on the vehicle information display even if the Intelligent Key is inside the vehicle. This is not a malfunction. To stop the warning indicator from blinking, touch the power switch with the Intelligent Key again.
- If the Intelligent Key battery discharge indicator appears on the vehicle information display, replace the battery as soon as possible. For additional information, refer to “NISSAN Intelligent Key® battery replacement” in the “Maintenance and do-it-yourself” section of this manual.
BEFORE STARTING THE EV SYSTEM

- Make sure that the area around the vehicle is clear.
- Check fluid levels such as coolant, brake fluid, and windshield-washer fluid as frequently as possible.
- Check that all windows and lights are clean.
- Visually inspect tires for their appearance and condition. Also check tires for proper inflation.
- Check that all doors are closed.
- Adjust the inside and outside mirrors.
- Fasten seat belts and ask all passengers to do likewise.
- Check the operation of the warning lights when the power switch is pushed to the ON position.

For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.

STARTING THE EV SYSTEM

1. Confirm the parking brake is applied.
2. Confirm that the vehicle is in the P (Park) position.

When the power switch is placed in the ON position, the EV is designed not to operate unless the shift lever is in the P (Park) or N (Neutral) positions.

The Intelligent Key must be carried with you when operating the power switch.

3. Depress the brake pedal and push the power switch to place the EV system in the READY to drive position.

To place the vehicle in the READY to drive position immediately, push and release the power switch while depressing the brake pedal with the power switch in any position. The READY to drive indicator light in the meter illuminates.

4. To stop the EV system, push the P (Park) position switch on the shift lever, and push the power switch to the OFF position.

DRIVING THE VEHICLE

ELECTRIC SHIFT CONTROL SYSTEM

This vehicle is electronically controlled to produce maximum available power and smooth operation.

The recommended operating procedures for this vehicle are shown on the following pages.

Starting vehicle

1. After placing the vehicle in the READY to drive position, fully depress the foot brake pedal before moving the shift lever to the D (Drive) position.

The shift lever of this vehicle is designed so that the foot brake pedal must be depressed before shifting from the P (Park) position to any driving position while the power switch is in the ON position.

The shift lever cannot be moved out of the P (Park) position and into any of the other positions if the power switch is placed in the LOCK, OFF or ACC position or if the key is removed.

2. Keep the foot brake pedal depressed, and move the shift lever to the D (Drive) position.
3. Release the parking brake and foot brake pedal, and then gradually start the vehicle in motion.

**WARNING**

- Do not depress the accelerator pedal while shifting from P (Park) or N (Neutral) to R (Reverse) or D (Drive) position. Always depress the brake pedal until shifting is completed. Failure to do so could cause you to lose control, which could result in an accident.
- Never shift to P (Park) or R (Reverse) position while vehicle is moving forward and P (Park) or D (Drive) position while the vehicle is reversing. This could cause you to lose control and have an accident.
- Do not shift to the B position abruptly on slippery roads. This may cause a loss of control.

**CAUTION**

- To avoid possible damage to your vehicle, when stopping the vehicle on an uphill grade, do not hold the vehicle by depressing the accelerator pedal. The foot brake should be used for this purpose.
- Do not hang items on the shift lever. This may cause an accident due to a sudden start.

Shifting

To move the shift lever,

- →: Slide along the gate while the brake pedal is depressed.
- ↔: After sliding, maintain it in the same position until the vehicle placed to N (Neutral) position.
- ↖: When in the D (Drive) position, slide along the gate.

5-12 Starting and driving
NOTE:
- Confirm that the vehicle is in the desired shift position by checking the shift indicator located near the shift lever or the vehicle information display in the meter.
- To place the vehicle into the D (Drive) position from the B position, move the shift lever into the D (Drive) position.

After placing the vehicle in the READY to drive position, fully depress the brake pedal, and move the shift lever to any of the preferred shift positions.

If the power switch is placed in the OFF or ACC position for any reason while the shift position is in any position other than the P (Park) position, the power switch cannot be placed in the LOCK position.

If the power switch cannot be placed in the LOCK position, perform the following steps.

1. Apply the parking brake when the vehicle is stopped.
2. Place the power switch in the ON position while depressing the foot brake pedal.
3. Push the P (Park) position switch and confirm the vehicle is in the P (Park) position.
4. Place the power switch in the OFF position.

NOTE:
The vehicle automatically applies the P (Park) position when the power switch is in the OFF position.

WARNING
- The shift lever is always in the center position when released. When the power switch is placed in the READY to drive position, the driver needs to confirm that the vehicle is in the P (Park) position. The indicator next to the “P” by the shift lever is illuminated and the “P” is displayed on the meter. If the vehicle is in the D (Drive) position or R (Reverse) position when the power switch is placed in the READY to drive position, this may cause a sudden start which could result in an accident.
- On a hilly road, do not allow the vehicle to roll backwards while in the D (Drive) position or B position, or allow the vehicle to roll forward while in the R (Reverse) position. This may cause an accident.

CAUTION
- Do not slide the shift lever while pushing the P (Park) position switch. This may damage the electric motor.
- When switching to the preferred position by operating the shift lever, check that the shift lever returns to the central position by releasing your hand from the lever. Holding the shift lever in a mid-way position may also damage the shift control system.
- Do not operate the shift lever while the accelerator pedal is depressed, except when switching to the B position. This may cause a sudden start which could result in an accident.
- The following operations are not allowed because excessive force would be applied to the traction motor and this may result in damage to the vehicle:
  - Moving the shift lever to the R (Reverse) position when driving forward
  - Moving the shift lever to the D (Drive) position when reversing
  - If these operations are attempted, a chime sounds and the vehicle shifts to the N (Neutral) position.
P (Park):
Use this shift position when the vehicle is parked or when placing the vehicle in the READY to drive position. Make sure that the vehicle is completely stopped. In order to switch to the P (Park) position, push the P (Park) position switch as shown in the illustration above once the vehicle has come to a complete stop. If the P (Park) position switch is pushed while sliding the shift lever, the shift position will not switch to the P (Park) position. When pushing the P (Park) position switch be sure to first allow the shift lever to return to its center position.

NOTE:
• While the vehicle is stationary, if the shift position is placed in any position other than the P (Park) position when the power switch is set to OFF, it will automatically switch to the P (Park) position.
• If the P (Park) position switch is pushed while sliding the shift lever, the shift position will not switch to the P (Park) position. When pushing the P (Park) position switch be sure to first allow the shift lever to return to its center position.

Use this shift position when the vehicle is parked or when placing the vehicle in the READY to drive position. Make sure that the vehicle is completely stopped. In order to switch to the P (Park) position, push the P (Park) position switch as shown in the illustration above once the vehicle has come to a complete stop. If the P (Park) position switch is pushed while sliding the shift lever, the shift position will not switch to the P (Park) position. When pushing the P (Park) position switch be sure to first allow the shift lever to return to its center position.

NOTE:
• While the vehicle is stationary, if the shift position is placed in any position other than the P (Park) position when the power switch is set to OFF, it will automatically switch to the P (Park) position.
• If the P (Park) position switch is pushed while sliding the shift lever, the shift position will not switch to the P (Park) position. When pushing the P (Park) position switch be sure to first allow the shift lever to return to its center position.

N (Neutral):
Neither forward nor reverse gear is engaged. The vehicle can be placed in the READY to drive position in this position. Do not shift to the N (Neutral) position while driving. The regenerative brake system does not operate in the N (Neutral) position. However, the vehicle brakes will still stop the car.

D (Drive):
Use this position for all normal forward driving. If the vehicle is placed in the D (Drive) position while reversing, the chime will sound and the vehicle will switch into the N (Neutral) position.

Use this position to back up. Make sure that the vehicle is completely stopped before selecting the R (Reverse) position. If the vehicle is placed in the D (Drive) position while reversing, the chime will sound and the vehicle will switch into the N (Neutral) position.
B mode:
The B mode engages the regenerative braking system more aggressively on downhill slopes, and helps reduce brake use. It is activated by moving the shift lever left and down. The shift lever will then return to the center position. For additional information, refer to “Brake system” in this section.

ECO mode:
Use ECO in order to help extend the driving range.
In comparison to the D (Drive) position, ECO consumes less power for the traction motor and enables the range of the vehicle to be extended. For additional information, refer to “ECO switch” in the “Instruments and controls” section of this manual.

WARNING
• Be sure the parking brake is released before driving. Failure to do so could cause brake failure and lead to an accident.
• Do not release the parking brake from outside the vehicle.
• To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.
• When leaving the vehicle, apply the parking brake and push the P (Park) position switch on the shift lever.
To engage: Firmly depress the parking brake.

To release:
1. Firmly apply the foot brake.
2. Firmly depress the parking brake and it will release.
3. Before driving, be sure the brake warning light goes out.

### CRUISE CONTROL

**PRECAUTIONS ON CRUISE CONTROL**

- If the cruise control system malfunctions, it will cancel automatically. The SET indicator on the vehicle information display will then blink to warn the driver.
- If the SET indicator on the vehicle information display blinks, turn the cruise control MAIN switch off and have the system checked. It is recommended that you visit a NISSAN certified LEAF dealer.
- The SET indicator on the vehicle information display may blink when the cruise control MAIN switch is turned ON while pushing the ACCEL/RES, COAST/SET or CANCEL switch. To properly set the cruise control system, perform the following procedure.

**WARNING**

Do not use the cruise control when driving under the following conditions:
- when it is not possible to keep the vehicle at a set speed
- in heavy traffic or in traffic that varies in speed
- on winding or hilly roads
- on slippery roads (rain, snow, ice, etc.)
- in very windy areas

Doing so could cause a loss of vehicle control and result in an accident.
CRUISE CONTROL OPERATION

1. ACCELERATE (ACCEL)/RESUME (RES) switch
2. COAST/SET switch
3. CANCEL switch
4. CRUISE (ON/OFF) switch

The cruise control allows driving at a speed between 25 to 93 mph (40 to 149 km/h) without keeping your foot on the accelerator pedal.

To turn on the cruise control, push the CRUISE ON/OFF switch on. The CRUISE indicator on the vehicle information display will illuminate.

To set the cruising speed, accelerate the vehicle to the preferred speed, push the COAST/SET switch and release it. Take your foot off the accelerator pedal. The vehicle will maintain the set speed.

- To pass another vehicle, depress the accelerator pedal. When you release the pedal, the vehicle will return to the previously set speed.
- The vehicle may not maintain the set speed on winding or hilly roads. If this happens, drive without using the cruise control.

To cancel the preset speed, use one of the following methods.
1. Push the CANCEL switch.
2. Tap the brake pedal.
3. Turn the CRUISE ON/OFF switch off. The CRUISE indicator on the vehicle information display will turn off.

- If you depress the brake pedal while pushing the ACCEL/RES or COAST/SET switch and reset at the cruising speed, the cruise control will disengage. Turn the CRUISE ON/OFF switch off once and then turn it on again.
- The cruise control will automatically cancel if the vehicle slows more than 8 mph (13 km/h) below the set speed.
- If you move the shift lever to the N (Neutral) position, the cruise control will be canceled.

To reset at a faster cruising speed, use one of the following methods.
- Depress the accelerator pedal. When the vehicle attains the preferred speed, push and release the COAST/SET switch.
- Push and hold the ACCEL/RES switch. When the vehicle attains the preferred speed, release the switch.
- Push, then quickly release the ACCEL/RES switch. Each time you do this, the set speed will increase by about 1 mph or 1.6 km/h.

To reset at a slower cruising speed, use one of the following methods.
- Lightly tap the brake pedal. When the vehicle attains the preferred speed, push the COAST/SET switch and release it.
- Push and hold the COAST/SET switch. Release the switch when the vehicle slows down to the preferred speed.

Starting and driving 5-17
- Push, then quickly release, the COAST/SET switch. Each time you do this, the set speed will decrease by about 1 mph or 1 km/h.

**To resume the preset speed**, push and release the ACCEL/RES switch. The vehicle will resume the last set cruising speed when the vehicle speed is over 25 mph (40 km/h).

**Vehicle range depends on a number of factors.** Actual vehicle range will vary depending upon:
- speed
- vehicle load
- electrical load from vehicle accessories
- traffic and road conditions

**NISSAN recommends the following driving habits to help maximize vehicle range:**

**Before driving:**
- Follow recommended periodic maintenance.
- Keep tires inflated to correct pressure.
- Keep wheels in correct alignment.
- Pre-heat or pre-cool the interior cabin while the vehicle is charging.
- Remove unnecessary cargo from the vehicle.

**While driving:**
- Drive in ECO mode
  - The ECO mode helps reduce power consumption by reducing acceleration when compared to the same accelerator pedal position in the D (Drive) position.
- Drive at a constant speed. Maintain cruising speeds with a constant accelerator position or by using cruise control when appropriate.
- Accelerate slowly and smoothly. Gently press and release the accelerator pedal for acceleration and deceleration.
- Drive at moderate speeds on the highway.
- Avoid frequent stopping and braking. Maintain a safe distance behind other vehicles.
- Turn off the air conditioner/heater when it is not necessary.
- Select a moderate temperature setting for heating or cooling to help reduce power consumption.
- Use the air conditioner/heater and close windows to reduce drag when cruising at highway speed.
- Release the accelerator pedal to slow down and do not apply the brakes when traffic and road conditions allow.
  - This vehicle is equipped with a regenerative brake system. The primary purpose of the regenerative brake system is to provide some power to recharge the Li-ion battery and extend driving range. A secondary benefit is "engine braking" that operates based on Li-ion battery conditions. In the D (Drive)
position, when the accelerator pedal is released, the regenerative brake system provides some deceleration and some power to the Li-ion battery.

### WARNING

- Do not stop or park the vehicle over flammable materials such as dry grass, waste paper or rags. They may ignite and cause a fire.
- Never leave the vehicle in the READY to drive mode while the vehicle is unattended.
- Do not leave children unattended inside the vehicle. They could unknowingly activate switches or controls. Unattended children could become involved in serious accidents.
- Safe parking procedures require that both the parking brake be applied and the vehicle placed in the park position. Failure to do so could cause the vehicle to move unexpectedly or roll away and result in an accident.

- To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.
1. Firmly apply the parking brake.
2. Push the P (Park) position switch on the shift lever.
3. To help prevent the vehicle from rolling into the street when parked on a slope, it is a good practice to turn the wheels as illustrated.
   - HEADED DOWNHILL WITH CURB: ①
     - Turn the wheels into the curb and move the vehicle forward until the curb side wheel gently touches the curb.
   - HEADED UPHILL WITH CURB: ②
     - Turn the wheels away from the curb and move the vehicle back until the curb side wheel gently touches the curb.
   - HEADED UPHILL OR DOWNHILL, NO CURB: ③
     - Turn the wheels toward the side of the road so the vehicle will move away from the center of the road if it moves.
4. Place the power switch in the OFF position.

WARNING
- If the READY to drive indicator light is OFF while driving, the power assist for the steering will not work. Steering will be harder to operate.
- When the power steering warning light illuminates while the READY to drive indicator light is ON, the power assist for the steering will cease operation. You will still have control of the vehicle but the steering will be harder to operate.

The power steering system is designed to provide power assistance while driving to operate the steering wheel with less effort.

When the steering wheel is operated repeatedly or continuously while parking or driving at a very low speed, the power assist for the steering wheel will be reduced. This is to prevent overheating of the power steering system and help protect it from getting damaged. When the power assistance is reduced, steering wheel operation will become harder. When the temperature of the power steering system goes down, the power assistance level will return to normal. Avoid repeating such steering wheel operations.
that could cause the power steering system to overheat.

You may hear a noise when the steering wheel is operated quickly. However, this is not a malfunction.

If the power steering warning light \( \text{PS} \) illuminates while the READY to drive indicator light is ON, it may indicate the power steering system is not functioning properly and may need servicing. Have the power steering system checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service. For additional information, refer to “Power steering warning light” in the “Instruments and controls” section of this manual.

The power assist for steering stops operating when both the power steering warning light and READY to drive indicator light are illuminated. You will still have control of the vehicle. However, greater steering effort is needed, especially in sharp turns and at low speeds.

### BRAKE SYSTEM

#### BRAKE PRECAUTIONS

This vehicle is equipped with two braking systems:

1. Hydraulic brake system
2. Regenerative brake system

#### Hydraulic brake system

The hydraulic brake system is similar to the brakes used on conventional vehicles. The brake system has two separate hydraulic circuits. If one circuit malfunctions, you will still have braking at two wheels.

#### Regenerative brake system

The primary purpose of the regenerative brake system is to provide some power to help recharge the Li-ion battery and extend driving range. A secondary benefit is “engine braking” that operates based on battery conditions.

In the D (Drive) range, when the accelerator is released, the regenerative brake system provides some deceleration and generates power for the Li-ion battery. Power is also generated when the brake pedal is applied.

When you put the shift lever in the B position and take your foot off the accelerator pedal, more regenerative brake is applied than in the D (Drive) position. However, during high-speed driving you may feel that regenerative brake provides less deceleration than the engine braking in an ordinary vehicle. This is normal.

Less deceleration is provided by the regenerative brake system when the Li-ion battery is fully charged. Regenerative brake is automatically reduced when the Li-ion battery is fully charged to prevent the Li-ion battery from becoming overcharged. Regenerative brake is also automatically reduced when the battery temperature is high/low (indicated by the red/blue zones on the battery temperature gauge) to prevent Li-ion battery damage.

The brake pedal should be used to slow or stop the vehicle depending on traffic or road conditions. The vehicle brakes are not affected by regenerative brake system operation.

**NOTE:**

- When applying the regenerative brakes, you may hear a sound coming from the regenerative brake system. This is a normal operating characteristic of an EV.
• If the power switch position is in a position other than ON or READY to drive, you can stop the vehicle by depressing the brake pedal. However, greater foot pressure on the brake pedal will be required to stop the vehicle, and the stopping distance will be longer.
• When depressing the brake pedal, the brake pedal feel will not be smooth or may change when the cooperative regenerative brake system activates. However, the electronically controlled brake system is operating normally and this does not indicate a malfunction.

Using brakes
Avoid resting your foot on the brake pedal while driving. This will cause overheating of the brakes, wearing out of the brake pads and shoes faster, and will reduce driving range.

To help reduce brake wear, and to prevent the brakes from overheating, reduce speed and select B position before going down a slope or long grade. Overheated brakes may reduce braking performance and could result in loss of vehicle control.

Wet brakes
When the vehicle is washed or driven through water, the brakes may get wet. As a result, the braking distance will be longer and the vehicle may pull to one side during braking.

To dry brakes, drive the vehicle at a safe speed while lightly tapping the brake pedal to heat up the brakes. Do this until the brakes return to normal. Avoid driving the vehicle at high speeds until the brakes have dried.

Parking brake break-in
Break-in the parking brake shoes whenever the stopping effect of the parking brake is weakened or whenever the parking brake shoes and/or drum/rotors are replaced, in order to assure the best braking performance.

This procedure is described in the Genuine NISSAN Service Manual, and it can be performed by a certified repair facility. It is recommended that you visit a NISSAN certified LEAF dealer.

ANTI-LOCK BRAKING SYSTEM (ABS)

WARNING
• The Anti-lock Braking System (ABS) is a sophisticated device, but it cannot prevent accidents resulting from careless or dangerous driving techniques. It can help maintain vehicle control during braking on slippery surfaces. Remember that stopping distances on slippery surfaces will be longer than on normal surfaces even with ABS. Stopping distances may also be longer on rough, gravel or snow covered
roads, or if you are using tire chains. Always maintain a safe distance from the vehicle in front of you. Ultimately, the driver is responsible for safety.

- Tire type and condition may also affect braking effectiveness.
- When replacing tires, install the specified size of tires on all four wheels.
- For additional information, refer to “Wheels and tires” in the “Maintenance and do-it-yourself” section of this manual.

The Anti-lock Braking System (ABS) controls the brakes so the wheels do not lock during hard braking or when braking on slippery surfaces. The system detects the rotation speed at each wheel and varies the brake fluid pressure to prevent each wheel from locking and sliding. By preventing each wheel from locking, the system helps the driver maintain steering control and helps to minimize swerving and spinning on slippery surfaces.

Using the system
Depress the brake pedal and hold it down. Depress the brake pedal with firm steady pressure, but do not pump the brakes. The ABS will operate to prevent the wheels from locking up. Steer the vehicle to avoid obstacles.

**WARNING**

Do not pump the brake pedal. Doing so may result in increased stopping distances.

Self-test feature
The ABS includes electronic sensors, electric pumps, hydraulic solenoids and a computer. The computer has a built-in diagnostic feature that tests the system each time you push the power switch in the READY to drive position and move the vehicle at a low speed in forward or reverse. When the self-test occurs, you may hear a “clunk” noise and/or feel a pulsation in the brake pedal. This is normal and does not indicate a malfunction. If the computer senses a malfunction, it switches the ABS off and illuminates the ABS warning light on the instrument panel. The brake system then operates normally, but without anti-lock assistance.

If the ABS warning light illuminates during the self-test or while driving, have the vehicle checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

Normal operation
The ABS operates at speeds above 3 to 6 mph (5 to 10 km/h). The speed varies according to road conditions.

When the ABS senses that one or more wheels are close to locking up, the actuator rapidly applies and releases hydraulic pressure. This action is similar to pumping the brakes very quickly. You may feel a pulsation in the brake pedal and hear a noise from under the hood or feel a vibration from the actuator when it is operating. This is normal and indicates that the ABS is operating properly. However, the pulsation may indicate that road conditions are hazardous and extra care is required while driving.
VEHICLE DYNAMIC CONTROL (VDC) SYSTEM

The VDC system uses various sensors to monitor driver inputs and vehicle motion. Under certain driving conditions, the VDC system helps to perform the following functions.

• Controls brake pressure to reduce wheel slip on one slipping drive wheel so power is transferred to a drive wheel on the same axle that is not slipping.

• Controls brake pressure and traction motor output to reduce drive wheel slip based on vehicle speed (traction control function).

• Controls brake pressure at individual wheels and traction motor output to help the driver maintain control of the vehicle in the following conditions.
  – understeer (vehicle tends to not follow the steered path despite increased steering input).
  – oversteer (vehicle tends to spin due to certain road or driving conditions).

The VDC system can help the driver maintain control of the vehicle, but it cannot prevent loss of vehicle control in all driving situations.

When the VDC system operates, the warning in the instrument panel flashes. When the warning flashes, note the following items.

• The road may be slippery or the system may determine some action is required to help keep the vehicle on the steered path.

• You may feel a pulsation in the brake pedal and hear a noise or vibration from under the hood. This is normal and indicates that the VDC system is working properly.

• Adjust your speed and driving according to the road conditions.

For additional information, refer to “Vehicle Dynamic Control (VDC) warning light” and “Vehicle Dynamic Control (VDC) OFF indicator light” in the “Instruments and controls” section of this manual.

If a malfunction occurs in the system, the warning illuminates in the lower display. The VDC system automatically turns off when this warning light is lit.

The VDC OFF switch is used to turn off the VDC system. The VDC OFF indicator illuminates to indicate that the VDC system is off. When the VDC switch is used to turn off the system, the VDC system still operates to prevent one drive wheel from slipping by transferring power to a non slipping wheel. The flashes if this occurs. All other VDC functions are off and the warning will not flash. The VDC System is automatically reset to ON when the power switch is placed in the OFF position then back to the ON position.

The computer has a built-in diagnostic feature that tests the system each time you start the EV and move the vehicle forward or in reverse at a slow speed. When the self-test occurs, you may hear a “clunk” noise and/or feel a pulsation in the brake pedal. This is normal and is not an indication of a malfunction.

**WARNING**

• The VDC system is designed to help the driver maintain stability but does not prevent accidents due to abrupt steering operation at high speeds or by careless or dangerous driving techniques. Reduce vehicle speed and be especially careful when driving and cornering on slippery surfaces and always drive carefully.

• Do not modify the vehicle’s suspension. If suspension parts such as shock absorbers, struts, springs, stabilizer bars, bushings and wheels are not NISSAN recommended for your vehicle or are extremely deteriorated the VDC system may not operate properly.
This could adversely affect vehicle handling performance, and the VDC OFF warning may flash or may illuminate.

- If brake related parts such as brake pads, rotors and calipers are not NISSAN recommended or are extremely deteriorated, the VDC system may not operate properly and may illuminate.
- If traction motor control related parts are not NISSAN recommended or are extremely deteriorated, the VDC may illuminate.
- When driving on extremely inclined surfaces such as higher banked corners, the VDC system may not operate properly and the VDC OFF warning may illuminate. Do not drive on these types of roads.
- When driving on an unstable surface such as a turntable, ferry, elevator or ramp, the VDC OFF warning may illuminate. This is not a malfunction. Restart the EV system after driving onto a stable surface.

• If wheels or tires other than the NISSAN recommended ones are used, the VDC system may not operate properly and the VDC OFF warning may illuminate.
• The VDC system is not a substitute for winter tires or tire chains on a snow covered road.

HILL START ASSIST SYSTEM

![WARNING]

- Never rely solely on the hill start assist system to prevent the vehicle from moving backward on a hill. Always drive carefully and attentively. Depress the brake pedal when the vehicle is stopped on a steep hill. Be especially careful when stopped on a hill on frozen or muddy roads. Failure to prevent the vehicle from rolling backwards may result in a loss of control of the vehicle and possible serious injury or death.
- The hill start assist system is not designed to hold the vehicle at a standstill on a hill. Depress the brake pedal when the vehicle is stopped on a steep hill. Failure to do so may cause the vehicle to roll backwards and may result in a collision or serious personal injury.
- The hill start assist may not prevent the vehicle from rolling backwards on a hill under all load or road conditions. Always be prepared to depress the brake pedal to prevent the vehicle from rolling backwards. Failure to do so may result in a collision or serious personal injury.

Starting and driving 5-25
The hill start assist system automatically keeps the brakes applied to help prevent the vehicle from rolling backwards in the time it takes the driver to release the brake pedal and apply the accelerator when the vehicle is stopped on a hill.

Hill start assist will operate automatically under the following conditions:
- The shift lever is shifted into D (Drive), B, or R (Reverse) position.
- The vehicle is stopped completely on a hill by applying the brake.

The maximum holding time is 2 seconds. After 2 seconds the vehicle will begin to roll back and hill start assist will stop operating completely.

Hill start assist will not operate when the shift lever is shifted into N (Neutral) or P (Park) position or on a flat and level road.

**CAUTION**

To prevent damage to the Li-ion battery:
- Do not store the vehicle in temperatures below -13°F (-25°C) for over seven days. If the outside temperature is -13°F (-25°C) or less, the Li-ion battery may freeze and it cannot be charged or provide power to run the vehicle. Move the vehicle to a warm location.

**NOTE:**
- Connect the charger to the vehicle and place the power switch in the OFF position when parking the vehicle if temperatures may go below -4°F (-20°C). This provides external power to the Li-ion battery warmer (if so equipped) when it operates and does not discharge the Li-ion battery.
- Vehicle driving range is reduced if the Li-ion battery warmer (if so equipped) operates (Li-ion battery temperature approximately -4°F (-20°C) or colder) while driving the vehicle. You may need to charge the Li-ion battery sooner than in warmer temperatures.
- The Li-ion battery requires more time to charge when the Li-ion battery warmer (if so equipped) operates.
- The predicted charging time displayed on the meter and navigation system increases when the Li-ion battery warmer (if so equipped) operates.
- Vehicle range may be substantially reduced in extremely cold conditions (for example under -4°F (-20°C)).
- Using the climate control system to heat the cabin when outside temperature is below 32°F (0°C) uses more electricity and affects vehicle range more than when using the heater when the temperature is above 32°F (0°C).
- Climate control performance is reduced when using the Climate Ctrl. Timer or Remote Climate Control while the Li-ion battery warmer (if so equipped) operates. Set only the charging timer [End Time] when charging in cold weather. The vehicle automatically determines when to start charging to fully charge the Li-ion battery, even if the Li-ion battery warmer operates. Charging ends before the set end time if the Li-ion battery is fully charged.
FREEING A FROZEN DOOR LOCK
To prevent a door lock from freezing, apply deicer through the key hole. If the lock becomes frozen, heat the key before inserting it into the key hole or use the remote keyless entry key fob.

ANTIFREEZE
In the winter when it is possible that the outside temperature will drop below 32°F (0°C), check the antifreeze to ensure proper winter protection. For additional information, refer to “Cooling system” in the “Maintenance and do-it-yourself” section of this manual.

12-VOLT BATTERY
If the 12-volt battery is not fully charged during extremely cold weather conditions, the 12-volt battery fluid may freeze and damage the 12-volt battery. To maintain maximum efficiency, the 12-volt battery should be checked regularly. For additional information, refer to “12-volt battery” in the “Maintenance and do-it-yourself” section of this manual.

DRAINING OF COOLANT WATER
If the vehicle is to be left outside without antifreeze, drain the cooling system. Refill before operating the vehicle. For additional information, refer to “Cooling system” in the “Maintenance and do-it-yourself” section of this manual.

TIRE EQUIPMENT
SUMMER tires have a tread designed to provide superior performance on dry pavement. However, the performance of these tires will be substantially reduced in snowy and icy conditions. If you operate your vehicle on snowy or icy roads, NISSAN recommends the use of MUD & SNOW or ALL SEASON tires on all four wheels. It is recommended that you visit a NISSAN certified LEAF dealer for the tire type, size, speed rating and availability information.

For additional traction on icy roads, studded tires may be used. However, some U.S. states and Canadian provinces prohibit their use. Check local, state and provincial laws before installing studded tires.

Skid and traction capabilities of studded snow tires, on wet or dry surfaces, may be poorer than that of non-studded snow tires.

Tire chains may be used. For additional information, refer to “Tire chains” in the “Maintenance and do-it-yourself” section of this manual.

SPECIAL WINTER EQUIPMENT
It is recommended that the following items be carried in the vehicle during winter:
• A scraper and stiff-bristled brush to remove ice and snow from the windows and wiper blades.
• A shovel to dig the vehicle out of snow-drifts.
• Extra windshield-washer fluid to refill the reservoir tank.
DRIVING ON SNOW OR ICE

**WARNING**

- Wet ice (32°F, 0°C and freezing rain), very cold snow or ice can be slick and very hard to drive on. The vehicle will have much less traction or “grip” under these conditions. Try to avoid driving on wet ice until the road is salted or sanded.
- Whatever the conditions, drive with caution. Accelerate and slow down with care. If accelerating too fast, the drive wheels will lose even more traction.
- Allow more stopping distance under these conditions. Braking should be started sooner than on dry pavement.
- Allow greater following distances on slippery roads.
- Watch for slippery spots (glare ice). These may appear on an otherwise clear road in shaded areas. If a patch of ice is seen ahead, brake before reaching it. Try not to brake while on the ice, and avoid any sudden steering maneuvers.
- Do not use cruise control on slippery roads.

FREEING A FROZEN CHARGE PORT LID

When the charge port is frozen, melt the ice using a hair dryer.

HAZARD WARNING FLASHER SWITCH

Push the switch on to warn other drivers when you must stop or park under emergency conditions. All turn signal lights will flash.

The flasher can be actuated with the power switch in any position.

**WARNING**
- If stopping for an emergency, be sure to move the vehicle well off the road.
- Do not use the hazard warning flashers while moving on the highway unless unusual circumstances force you to drive so slowly that your vehicle might become a hazard to other traffic.
- Turn signals do not work when the hazard warning flasher lights are on.

**ROADSIDE ASSISTANCE PROGRAM**

In the event of a roadside emergency, Roadside Assistance Service is available to you. For additional information, please refer to your Warranty Information Booklet (U.S.) or Warranty & Roadside Assistance Information Booklet (Canada) for details.

In case of emergency
EMERGENCY EV (ELECTRIC VEHICLE) SHUT OFF

To shut off the EV system in an emergency situation while driving, perform the following procedure.

• Rapidly push the power switch three consecutive times in less than 1.5 seconds, or
• Push and hold the power switch for more than 2 seconds.

FLAT TIRE

TIRE PRESSURE MONITORING SYSTEM (TPMS)

This vehicle is equipped with TPMS. It monitors tire pressure of all tires. When the low tire pressure warning light is lit, and the CHECK TIRE PRESSURE warning appears on the vehicle information display, one or more of your tires is significantly under-inflated. If the vehicle is being driven with low tire pressure, the TPMS will activate and warn you of it by the low tire pressure warning light. This system will activate only when the vehicle is driven at speeds above 16 mph (25 km/h). For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section and “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section of this manual.

WARNING

• Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.

• If the low tire pressure warning light illuminates while driving, avoid sudden steering maneuvers or abrupt braking, reduce vehicle speed, pull off the road to a safe location and stop the vehicle as soon as possible. Driving with underinflated tires may permanently damage the tires and increase the likelihood of tire failure. Serious vehicle damage could occur and may lead to an accident and could result in serious personal injury. Check the tire pressure for all four tires. Adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label to turn the low tire pressure warning light OFF. If the light still illuminates while driving after adjusting the tire pressure, a tire may be flat. If you have a flat tire, repair it as soon as possible.

• When replacing a wheel without the TPMS such as the spare tire, TPMS will not function and the low tire pressure warning light will flash for approximately 1 minute. The light will remain on after 1 minute. Have your tires replaced and/or TPMS system reset as soon as possible. It is recommended that you visit a NISSAN certified LEAF dealer for these services.

In case of emergency 6-3
• Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.
• The Genuine NISSAN Emergency Tire Repair Sealant or equivalent can be used for temporarily repairing a tire. Do not inject any other tire liquid or aerosol tire sealant into the tires, as this may cause a malfunction of tire pressure sensors.
• NISSAN recommends using only NISSAN Genuine Emergency Tire Sealant provided with your vehicle. Other tire sealants may damage the valve stem seal which can cause the tire to lose air pressure. It is recommended that you visit a NISSAN certified LEAF dealer as soon as possible after using tire repair sealant (for models equipped with the emergency tire puncture repair kit).

**REPAIRING FLAT TIRE**

**WARNING**

• After using Emergency Tire Sealant to repair a minor tire puncture, do not drive the vehicle at speeds faster than 50 mph (80 km/h).
• Immediately after using the Emergency Tire Sealant to repair a minor tire puncture, take your vehicle to a NISSAN certified LEAF dealer to inspect, and repair or replace the tire. The Emergency Tire Sealant cannot permanently seal a punctured tire. Continuing operation of the vehicle without a permanent tire repair can lead to a crash.
• If you used the Emergency Tire Sealant to repair a minor tire puncture, a NISSAN certified LEAF dealer will also need to replace the TPMS sensor in addition to repairing or replacing the tire.

• NISSAN recommends using only NISSAN Genuine Emergency Tire Sealant provided with your vehicle. Other tire sealants may damage the valve stem seal which can cause the tire to lose air pressure.

This vehicle does not have a spare tire. The emergency tire puncture repair kit (Emergency Tire Sealant) is supplied with the vehicle instead of a spare tire. It can be used to temporarily repair minor tire punctures.

If possible, have the vehicle towed to a facility that can repair or replace the flat tire. Using the emergency tire puncture repair kit may cause a malfunction of the tire pressure sensor and cause the low tire pressure warning light to illuminate.

**CAUTION**

• To avoid the emergency tire puncture kit being damaged during storage or use:
  - Only use the emergency tire puncture repair kit on your vehicle. Do not use it on other vehicles.
Only use the kit to inflate the tires of your vehicle and to check the vehicle’s tire pressure.

Only plug the compressor into a 12-volt DC car power point.

Keep the kit free of water and dirt.

Do not disassemble or modify the kit.

Do not drop the kit or allow hard impacts to the kit.

Do not use the emergency tire puncture repair kit under the following conditions. It is recommended that you visit a NISSAN certified LEAF dealer or professional road assistance.

- when the sealant has passed its expiration date
- when the cut or the puncture is approximately 0.25 in (6 mm) or longer
- when the tire sidewall is damaged
- when the vehicle has been driven with extremely low tire pressure
- when the tire has come off the inside or the outside of the wheel
- when the tire wheel is damaged
- when two or more tires are flat

If you have a flat tire, follow the instructions below.

Stopping the vehicle

1. Safely move the vehicle off the road and away from traffic.
2. Turn on the hazard warning flashers.
3. Park on a level surface and apply the parking brake.
4. Push the P (Park) position switch on the shift lever to the P (Park) position.
5. Turn off the EV system.
6. Raise the hood to warn other traffic and to signal professional road assistance personnel that you need assistance.
7. Have all passengers get out of the vehicle and stand in a safe place, away from traffic and clear of the vehicle.

**WARNING**

- Make sure the parking brake is securely applied and the vehicle is placed into the P (Park) position.
- Never repair tires when the vehicle is on a slope, ice or slippery areas. This is hazardous.
- Never repair tires if oncoming traffic is close to your vehicle. Wait for professional road assistance.

In case of emergency 6-5
Getting emergency tire puncture repair kit

Take out the emergency tire puncture repair kit located under the cargo area. The repair kit consists of the following items:

1. Tire sealant bottle
2. Air compressor*
3. Speed restriction sticker

* The compressor shape may differ depending on the models.

Before using emergency tire puncture repair kit

- If any foreign object (for example, a screw or nail) is embedded in the tire, do not remove it.
- Check the expiration date of the sealant (shown on the label attached to the bottle). Never use a sealant whose expiration date has passed.

Repairing tire:

**WARNING**

Observe the following precautions when using the tire repair compound.

- Swallowing the compound is dangerous. Immediately drink as much water as possible and seek prompt medical assistance.
- Rinse well with lots of water if the compound comes into contact with skin or eyes. If irritation persists, seek prompt medical attention.
- Keep the repair compound out of the reach of children.

- The emergency repair compound may cause a malfunction of the tire pressure sensors and cause the low tire pressure warning light to illuminate. Have the tire pressure sensor replaced as soon as possible.
1. Take out the speed restriction sticker from the air compressor, then put it in a location where the driver can see it while driving.

**CAUTION**

Do not put the speed restriction label on the steering wheel pad, the speedometer or the warning light locations.

2. Take the hose ① and the power plug ② out of the air compressor. Remove the cap of the bottle holder from the air compressor.

3. Remove the cap from the tire sealant bottle, and screw the bottle clockwise onto the bottle holder. (Leave the bottle seal intact. Screwing the bottle onto the bottle holder will pierce the seal of the bottle.)

4. Remove the cap from the tire valve on the flat tire.

In case of emergency 6-7
5. Remove the protective cap \( A \) of the hose and screw the hose securely onto the tire valve. Make sure that the pressure release valve \( B \) is securely tightened. Make sure that the air compressor switch is in the OFF (O) position, and then insert the power plug into the power outlet in the vehicle.

6. Push the power switch to the “ACC” position. Then turn the compressor switch to the ON (−) position and inflate the tire up to the pressure that is specified on the Tire and Loading Information label affixed to the driver’s side center pillar if possible, or to the minimum of 26 psi (180 kPa). Turn the air compressor off briefly in order to check the tire pressure with the pressure gauge.

If the tire is inflated to higher than the specified pressure, lower the tire pressure by releasing air with the pressure release valve.

**NOTE:**
The compressor tire pressure gauge may show a pressure reading of 87 psi (600 kPa) for about 30 seconds while inflating the tire. The pressure gauge is indicating the pressure inside the sealant can. When the sealant has been injected into the tire the pressure gauge will drop and indicate actual tire pressure.

**WARNING**
To avoid serious personal injury while using the emergency tire puncture repair kit:
- Securely tighten the compressor hose to the tire valve. Failure to do so can cause the sealant to spray into the air and get into your eyes or on the skin.
- Do not stand directly beside the damaged tire while it is being inflated because of the risk of the rupture. If there are any cracks or bumps, turn the compressor off immediately.

---

6-8 **In case of emergency**
If the tire pressure does not increase to **26 psi (180 kPa)** within **10 minutes**, the tire may be seriously damaged and the tire cannot be repaired with this tire repair kit. It is recommended that you visit a NISSAN certified LEAF dealer.

7. When the tire pressure is at the specified amount, turn the air compressor off. If the tire cannot be inflated to the specified amount, the air compressor can be turned off at the minimum of 26 psi (180 kPa). Remove the power plug from the power outlet and quickly remove the hose from the tire valve. Attach the protective cap and valve cap. Properly stow the emergency tire puncture repair kit in the cargo area.

**CAUTION**

To avoid serious personal injury when stowing the emergency tire puncture repair kit:

- Keep the sealant bottle screwed into the compressor. Failure to do so can cause the sealant to spray into the air and get into your eyes or on the skin.

8. Immediately drive the vehicle for **10 minutes** or **2 miles (3 km)** at a speed below **50 mph (80 km/h)**.

9. After driving, make sure that the air compressor switch is in the OFF position, then screw the hose securely onto the tire valve. Check the tire pressure with the pressure gauge. Temporary repair is completed if the tire pressure does not drop.

Make sure the pressure is adjusted to the specification on the Tire and Loading Information label before driving.

10. If the tire pressure drops, repeat the steps from **5** to **9**. If the pressure drops again or under **19 psi (130 kPa)**, **the tire cannot be repaired with this tire repair kit**. It is recommended that you visit a NISSAN certified LEAF dealer.

The sealant bottle and hose cannot be reused to repair another punctured tire. It is recommended that you visit a NISSAN certified LEAF dealer to purchase replacements.

After repairing tire:

It is recommended that you visit a NISSAN certified LEAF dealer for tire repair/replacement as soon as possible.

**WARNING**

- After using Emergency Tire Sealant to repair a minor tire puncture, do not drive the vehicle at speeds faster than **50 mph (80 km/h)**.
- Immediately after using Emergency Tire Sealant to repair a minor tire puncture, take your vehicle to a NISSAN certified LEAF dealer to inspect, and repair or replace the tire. The Emergency Tire Sealant cannot permanently seal a punctured tire. Continuing operation of the vehicle without a permanent tire repair can lead to a crash.
- Do not inject any tire liquid or aerosol tire sealant into the tires, as this may cause a malfunction of the tire pressure sensors.
- If you used the Emergency Tire Sealant to repair a minor tire puncture, a NISSAN certified LEAF dealer will also need to replace the TPMS sensor in addition to repairing or replacing the tire.
JUMP STARTING

To start your EV system with a booster battery, the instructions and precautions below must be followed.

Jump starting provides power to the 12-volt system to allow the electrical systems to operate. The electrical systems must be operating to allow the Li-ion battery to be charged. Jump starting does not charge the Li-ion battery. The Li-ion battery must be charged before the vehicle can be driven.

**WARNING**

- If done incorrectly, jump starting can lead to a 12-volt battery explosion, resulting in severe injury or death. It could also damage your vehicle.
- Explosive hydrogen gas is always present in the vicinity of the 12-volt battery. Keep all sparks and flames away from the 12-volt battery.
- Do not allow battery fluid to come into contact with eyes, skin, clothing or painted surfaces. Battery fluid is a corrosive sulfuric acid solution that can cause severe burns. If the fluid comes into contact with anything, immediately flush the contacted area with water.

- Keep the 12-volt battery out of the reach of children.
- The booster battery must be rated at 12 volt. Use of an improperly rated battery can damage your vehicle.
- Whenever working on or near a 12-volt battery, always wear suitable eye protectors (for example, goggles or industrial safety spectacles) and remove rings, metal bands, or any other jewelry. Do not lean over the 12-volt battery when jump starting.
- Do not attempt to jump start a frozen battery. It could explode and cause serious injury.
- Your vehicle has an automatic cooling fan. It could come on at any time. Keep hands and other objects away from it.

**WARNING**

- Always follow the instructions below. Failure to do so could result in damage to the DC/DC converter and cause personal injury.
**CAUTION**

LEAF cannot be used as a booster vehicle because it cannot supply enough power to start a gasoline engine. However, a gasoline engine vehicle can be used to jump start LEAF’s 12-volt battery.

1. If the booster battery is in another vehicle (8), position the two vehicles (A and B) to bring their 12-volt batteries into close proximity to each other.

   ① Do not allow the two vehicles to touch.

2. Apply the parking brake.

   If the 12-volt battery is discharged, the power switch cannot be moved from the OFF position. Connect the jumper cables to the booster vehicle (B) before pushing the power switch.

3. Push the P (Park) position switch to place the vehicle in the P (Park) position.

4. Switch off all unnecessary electrical systems (headlights, heater, air conditioner, etc.).

5. Place the power switch in the OFF position.

6. Ensure vent caps are level and tight.

7. Connect jumper cables in the sequence as illustrated (① → ② → ③ → ④).

   **CAUTION**

   - Always connect positive (+) to positive (+) and negative (−) to body ground (for example, as illustrated), not to the 12-volt battery.
   - Make sure the jumper cables do not touch moving parts in the motor compartment and that the cable clamps do not contact any other metal.

8. Start the engine of the booster vehicle (B).
9. While the booster vehicle engine is running, place the EV system in the READY to drive position.

CAUTION
If the system does not start right away, push the power switch to the OFF position and wait 10 seconds before trying again.

10. After starting your EV system, carefully disconnect the negative cable and then the positive cable (4 → 3 → 2 → 1) and keep the READY to drive position over 20 minutes to charge the 12-volt battery.

11. If necessary, connect the vehicle to a charging station or EVSE (Electric Vehicle Supply Equipment) to charge the Li-ion battery. For additional information, refer to “Charging” section. The vehicle cannot be driven until the Li-ion battery is charged.

NOTE:
If it is not possible to turn the system ON by following this procedure, it is recommended that you visit a NISSAN certified LEAF dealer immediately.

IF THE LI-ION BATTERY BECOMES COMPLETELY DISCHARGED
If the power limitation indicator light illuminates, the traction motor output is limited resulting in reduced vehicle speed. Stop the vehicle in a safe location before the Li-ion battery becomes completely discharged and no power is available to drive the vehicle. Contact Roadside assistance; refer to a NISSAN Warranty Information Booklet.

If possible, place the power switch in the OFF position while waiting for assistance to prevent discharging the 12-volt battery.

NOTE:
If the Li-ion battery becomes completely discharged:
• The vehicle is automatically placed in the ON position and it will not be possible to switch to the READY to drive position.
• The vehicle is automatically switched to the N (Neutral) position and it will not be possible to drive the vehicle.

WARNING
If the vehicle is in the N (Neutral) position and the Li-ion battery and the 12-volt battery become completely discharged, the vehicle cannot be placed in the P (Park) position. If this occurs, place suitable blocks at both the front and back of a wheel to prevent the vehicle from moving. Failure to block a wheel may allow the vehicle to move unexpectedly which may result in serious personal injury or death.

To place the vehicle in the READY to drive position so the vehicle can be driven, charge the Li-ion battery until the driving range on the instrument panel changes from “---” to a numeric distance.

IF THE LI-ION BATTERY BECOMES COMPLETELY DISCHARGED

WARNING

In case of emergency
PUSH STARTING
Do not attempt to start the system by pushing the vehicle.

An EV cannot be push-started or tow-started. Attempting to do so may cause traction motor damage.

TOWING YOUR VEHICLE
When towing your vehicle, all State (Provincial in Canada) and local regulations for towing must be followed. Incorrect towing equipment could damage your vehicle. Towing instructions are available from a NISSAN certified LEAF dealer. Local service operators are familiar with the applicable laws and procedures for towing. To assure proper towing and to prevent accidental damage to your vehicle, NISSAN recommends that you have a service operator tow your vehicle. It is advisable to have the service operator carefully read the following precautions.

WARNING
• Never ride in a vehicle that is being towed.
• Never get under your vehicle after it has been lifted by a tow truck.

CAUTION
• When towing, make sure that the axles, steering system and power train are in working condition. If any unit is damaged, dollies must be used.
• Always attach safety chains before towing.

For additional information about towing your vehicle behind a Recreational Vehicle (RV), refer to “Flat towing” in the “Technical and consumer information” section of this manual.
NISSAN recommends that your vehicle be towed with the driving (front) wheels off the ground or that the vehicle be placed on a flatbed truck as illustrated.

**CAUTION**
- Never tow with the front wheels on the ground or four wheels on the ground (forward or backward), as this may cause serious and expensive damage to the motor.
- When towing this vehicle with the rear wheels on the ground (if you do not use towing dollies): Always release the parking brake.

**NOTE:**
If your vehicle cannot be moved because the vehicle cannot be shifted to the N (Neutral) position, please refer to the LEAF Roadside Assistance Guide which is located at www.NISSANUSA.com. If your vehicle cannot be moved because the parking brake cannot be released, refer to “Parking brake” in the “Starting and driving” section of this manual.

**VEHICLE RECOVERY (FREEING A STUCK VEHICLE)**

**WARNING**
To avoid vehicle damage, serious personal injury or death when recovering a stuck vehicle:
- Contact a professional towing service to recover the vehicle if you have any questions regarding the recovery procedure.
- Tow chains or cables must be attached only to main structural members of the vehicle.
- Do not use the vehicle tie-downs to tow or free a stuck vehicle.
- Only use devices specifically designed for vehicle recovery and follow the manufacturer’s instructions.
- Always pull the recovery device straight out from the front of the vehicle. Never pull at an angle.
- Route recovery devices so they do not touch any part of the vehicle except the attachment point.
If your vehicle is stuck in sand, snow, mud, etc., use a tow strap or other device designed specifically for vehicle recovery. Always follow the manufacturer's instructions for the recovery device.

Rocking a stuck vehicle
If the vehicle is stuck in sand, snow, mud, etc., try to free it by following the procedure below.

1. Turn off the Vehicle Dynamic Control (VDC) system.
2. Make sure the area in front and behind the vehicle is clear of obstructions.
3. Turn the steering wheel left and right to clear an area around the front tires.
4. Slowly rock the vehicle forward and backward.
   - Shift back and forth between the R (Reverse) and D (Drive) positions.
   - Apply the accelerator as little as possible to maintain the rocking motion.
   - Release the accelerator pedal before shifting between R (Reverse) and D (Drive).
   - Do not spin the tires above 35 mph (55 km/h).
5. If the vehicle cannot be freed after a few tries, contact a professional towing service to remove the vehicle.

Protect your vehicle from corrosion. ......................... 7-7
CLEANING EXTERIOR

In order to maintain the appearance of your vehicle, it is important to take proper care of it. To protect the paint surfaces, wash your vehicle as soon as you can:

• After a rainfall to prevent possible damage from acid rain.
• After driving on coastal roads.
• When contaminants such as soot, bird droppings, tree sap, metal particles or bugs get on the paint surface.
• When dust or mud builds up on the surface.

Whenever possible, store or park your vehicle inside a garage or in a covered area. When it is necessary to park outside, park in a shady area or protect the vehicle with a body cover.

Be careful not to scratch the paint surface when putting on or removing the body cover.

WASHING

Wash dirt off the vehicle with a wet sponge and plenty of water. Clean the vehicle thoroughly using a mild soap, a special vehicle soap or general purpose dishwashing liquid mixed with clean, lukewarm (never hot) water.

Rinse the vehicle thoroughly with plenty of clean water.

Inside flanges, seams and folds on the doors, hatches and hood are particularly vulnerable to the effects of road salt. Therefore, these areas must be regularly cleaned. Make sure that the drain holes in the lower edge of the door are open. Spray water under the body and in the wheel wells to loosen the dirt and wash away road salt.

Avoid leaving water spots on the paint surface by using a damp chamois to dry the vehicle.

WAXING

Regular waxing protects the paint surface and helps retain new vehicle appearance. Polishing is recommended to remove built-up wax residue and to avoid a weathered appearance before reapplying wax.

A NISSAN certified LEAF dealer can assist you in choosing the proper product.

• Wax your vehicle only after a thorough washing. Follow the instructions supplied with the wax.
• Do not use a wax containing any abrasives, cutting compounds or cleaners that may damage the vehicle finish.

Machine compound or aggressive polishing on a base coat/clear coat paint finish may dull the finish or leave swirl marks.
REMOVING SPOTS
Remove tar and oil spots, industrial dust, insects, and tree sap as quickly as possible from the paint surface to avoid lasting damage or staining. Special cleaning products are available at a NISSAN certified LEAF dealer or any automotive accessory stores.

UNDERBODY
In areas where road salt is used in winter, the underbody must be cleaned regularly. This will prevent dirt and salt from building up and causing the acceleration of corrosion on the underbody and suspension. Before the winter period and again in the spring, the underseal must be checked and, if necessary, re-treated.

GLASS
Use glass cleaner to remove smoke and dust film from the glass surfaces. It is normal for glass to become coated with a film after the vehicle is parked in the hot sun. Glass cleaner and a soft cloth will easily remove this film.

SOLAR CELL MODULE (IF SO EQUIPPED)
The solar cell uses a plastic cover. When cleaning the cell:
- Do not polish the solar cell using a dry cloth or a wax that contains a compound. Doing so may strip off the hard coating.
- In order to maintain the solar cell’s effectiveness, be sure to remove any leaves or dirt from the surface of the cell.

WHEELS
Wash the wheels when washing the vehicle to maintain their appearance.
- Clean the inner side of the wheels when the wheel is changed or the underside of the vehicle is washed.
- Inspect wheel rims regularly for dents or corrosion. Such damage may cause loss of pressure or poor seal at the tire bead.

CAUTION
- NISSAN recommends that the road wheels be waxed to protect against road salt in areas where it is used during winter.

CAUTION
Do not use abrasive cleaners when washing the wheels.

Aluminum alloy wheels (if so equipped)
Wash regularly with a sponge dampened in a mild soap solution, especially during winter months in areas where road salt is used. Salt could discolor the wheels if not removed.

CAUTION
Follow the directions below to avoid staining or discoloring the wheels:
- Do not use a cleaner that uses strong acid or alkali contents to clean the wheels.
- Do not apply wheel cleaners to the wheels when they are hot. The wheel temperature should be the same as ambient temperature.
- Rinse the wheel to completely remove the cleaner within 15 minutes after the cleaner is applied.
CHROME PARTS
Clean chrome parts regularly with a non-abrasive chrome polish to maintain the finish.

TIRE DRESSING
NISSAN does not recommend the use of tire dressings. Tire manufacturers apply a coating to the tires to help reduce discoloration of the rubber. If a tire dressing is applied to the tires, it may react with the coating and form a compound. This compound may come off the tire while driving and stain the vehicle paint.

If you choose to use a tire dressing, take the following precautions:
• Use a water-based tire dressing. The coating on the tire dissolves more easily with an oil-based tire dressing.
• Apply a light coat of tire dressing to help prevent it from entering the tire tread/grooves (where it would be difficult to remove).
• Wipe off excess tire dressing using a dry towel. Make sure the tire dressing is completely removed from the tire tread/grooves.
• Allow the tire dressing to dry as recommended by the tire dressing manufacturer.

CLEANING INTERIOR
Occasionally remove loose dust from the interior trim, plastic parts and seats using a vacuum cleaner or soft bristled brush. Wipe the vinyl and leather surfaces with a clean, soft cloth dampened in mild soap solution, then wipe clean with a dry soft cloth.

Regular care and cleaning is required in order to maintain the appearance of the leather.

Before using any fabric protector, read the manufacturer’s recommendations. Some fabric protectors contain chemicals that may stain or bleach the seat material.

Use a cloth dampened only with water to clean the meter and gauge lens.

WARNING
Do not use water or acidic cleaners (hot steam cleaners) on the seat. This can damage the seat or occupant classification sensor (weight sensor). This can also affect the operation of the air bag system and result in serious personal injury.

CAUTION
• Never use benzine, thinner, or any similar material.
• Small dirt particles can be abrasive and damaging to the leather surfaces and should be removed promptly. Do not use saddle soap, car waxes, polishes, oils, cleaning fluids, solvents, detergents or ammonia-based cleaners as they may damage the leather's natural finish.
• Never use fabric protectors unless recommended by the manufacturer.
• Do not use glass or plastic cleaner on meter or gauge lens covers. It may damage the lens cover.

7-4 Appearance and care
AIR FRESHENERS
Most air fresheners use a solvent that could affect the vehicle interior. If you use an air freshener, take the following precautions:

- Hanging-type air fresheners can cause permanent discoloration when they contact vehicle interior surfaces. Place the air freshener in a location that allows it to hang free and not contact an interior surface.
- Liquid-type air fresheners typically clip on the vents. These products can cause immediate damage and discoloration when spilled on interior surfaces.

Carefully read and follow the manufacturer’s instructions before using air fresheners.

FLOOR MATS

To avoid potential pedal interference that may result in a collision, injury or death:

- NEVER place a floor mat on top of another floor mat in the driver front position or install them upside down or backwards.
- Use only Genuine NISSAN floor mats, or equivalent floor mats, that are specifically designed for use in your vehicle model and model year.

- Properly position the mats in the floor-well using the floor mat positioning hook. For additional information, refer to “Floor mat installation” in this section.
- Make sure the floor mat does not interfere with pedal operation.
- Periodically check the floor mats to make sure they are properly installed.
- After cleaning the vehicle interior, check the floor mats to make sure they are properly installed.

The use of Genuine NISSAN floor mats can extend the life of your vehicle carpet and make it easier to clean the interior. Mats should be maintained with regular cleaning and replaced if they become excessively worn.

Floor mat installation
Your vehicle is equipped with floor mat positioning hook(s). The number and shape of the floor mat positioning hooks for each seating position varies depending on the vehicle.
When installing Genuine NISSAN floor mats, follow the installation instructions provided with the mat and the following:

1. Position the floor mat in the floorwell so that the floor mat grommet holes are aligned with the hook(s).
2. Secure the grommet holes into the hook(s) and ensure that the floor mat is properly positioned.
3. Make sure the floor mat does not interfere with pedal operation. With the ignition in the OFF position, the selector lever in the P (Park) position (Automatic Transmission models) or the shift lever in the N (Neutral) position (Manual Transmission models) fully apply and release all pedals. The floor mat must not interfere with pedal operation or prevent the pedal from returning to its normal position.

It is recommended that you visit a NISSAN dealer for details about installing the floor mats in your vehicle.

**Positioning hooks**

The illustration shows the location of floor mat positioning hooks.

**SEAT BELTS**

The seat belts can be cleaned by wiping them with a sponge dampened in a mild soap solution. Allow the belts to dry completely in the shade before using them.

For additional information, refer to “Seat belts” in the “Safety—Seats, seat belts and supplemental restraint system” section of this manual.

**WARNING**

Do not allow wet seat belts to roll up in the retractor. NEVER use bleach, dye, or chemical solvents to clean the seat belts, since these materials may severely weaken the seat belt webbing.
CORROSION PROTECTION

MOST COMMON FACTORS CONTRIBUTING TO VEHICLE CORROSION

• The accumulation of moisture-retaining dirt and debris in body panel sections, cavities, and other areas.
• Damage to paint and other protective coatings caused by gravel and stone chips or minor traffic accidents.

ENVIRONMENTAL FACTORS INFLUENCE THE RATE OF CORROSION

Moisture
Accumulation of sand, dirt and water on the vehicle body underside can accelerate corrosion. Wet floor coverings will not dry completely inside the vehicle, and should be removed for drying to avoid floor panel corrosion.

Relative humidity
Corrosion will be accelerated in areas of high relative humidity, especially those areas where the temperatures stay above freezing, where atmospheric pollution exists, or where road salt is used.

Temperature
A temperature increase will accelerate the rate of corrosion to those parts which are not well ventilated.

Air pollution
Industrial pollution, the presence of salt in the air in coastal areas, or heavy road salt use will accelerate the corrosion process. Road salt will also accelerate the disintegration of paint surfaces.

PROTECT YOUR VEHICLE FROM CORROSION

• Wash and wax your vehicle often to keep the vehicle clean.
• Always check for minor damage to the paint and repair it as soon as possible.
• Keep drain holes at the bottom of the doors open to avoid water accumulation.
• Check the underbody for accumulation of sand, dirt or salt. If present, wash with water as soon as possible.

CAUTION

• NEVER remove dirt, sand or other debris from the passenger compartment by washing it out with a hose. Remove dirt with a vacuum cleaner.
• Never allow water or other liquids to come in contact with electronic components inside the vehicle as this may damage them.

Chemicals used for road surface deicing are extremely corrosive. They accelerate corrosion and deterioration of underbody components such as the brake lines, brake cables, floor pan and fenders.

In winter, the underbody must be cleaned periodically.

For additional protection against rust and corrosion, which may be required in some areas, it is recommended that you consult a NISSAN certified LEAF dealer.

MAINTENANCE REQUIREMENT

Your new NISSAN has been designed to have minimum maintenance requirements with long service intervals to save you both time and money. However, some day-to-day and regular maintenance is essential to maintain your NISSAN’s fine mechanical condition, and its Electric Vehicle (EV) system performance.

It is the owner’s responsibility to make sure that the scheduled maintenance, and general maintenance, is performed.

As the vehicle owner, you are the only one who can ensure that your vehicle receives the proper maintenance care. You are a vital link in the maintenance chain.

SCHEDULED MAINTENANCE

For your convenience, both required and optional scheduled maintenance items are described and listed in your “NISSAN Service and Maintenance Guide”. You must refer to that guide to ensure that necessary maintenance is performed on your NISSAN at regular intervals.

GENERAL MAINTENANCE

General maintenance includes those items which should be checked during normal day-to-day operation. They are essential for proper vehicle operation. It is your responsibility to perform these procedures regularly as prescribed.

Performing general maintenance checks requires minimal mechanical skill and only a few general automotive tools.

These checks or inspections can be done by yourself, a qualified technician or, if you prefer, a NISSAN certified LEAF dealer.

WHERE TO GO FOR SERVICE

If maintenance service is required or your vehicle appears to malfunction, have the systems checked and serviced. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

NISSAN technicians are well-trained specialists and are kept up-to-date with the latest service information through technical bulletins, service tips, and in-dealership information systems. They are completely qualified to work on NISSAN vehicles before work begins.

You can be confident that a NISSAN certified LEAF dealer’s service department performs the best job to meet the maintenance requirements on your vehicle — in a reliable and economical way.

GENERAL MAINTENANCE

During the normal day-to-day operation of the vehicle, general maintenance should be performed regularly as prescribed in this section. If you detect any unusual sounds, vibrations or smell, be sure to check for the cause or have a NISSAN certified LEAF dealer do it promptly. In addition, you should notify a NISSAN certified LEAF dealer if you think that repairs are required.

When performing any checks or maintenance work, refer to “Maintenance precautions” in this section.

EXPLANATION OF MAINTENANCE ITEMS

Additional information on the following items with “*” is found in this section.

Outside vehicle

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Doors and motor hood: Check that all doors and the motor hood operate properly. Also ensure that all latches lock securely. Lubricate hinges, latches, latch pins, rollers and links if necessary. Make sure that the secondary latch
keeps the motor hood from opening when the primary latch is released.

When driving in areas using road salt or other corrosive materials, check lubrication frequently.

**Lights**: Clean the headlights on a regular basis. Make sure that the headlights, stop lights, tail lights, turn signal lights and other lights are all operating properly and installed securely. Also check the aim of the headlights.

**Road wheel nuts (lug nuts)**: When checking the tires, make sure that no wheel nuts are missing, and check for any loose wheel nuts. Tighten if necessary.

**Tire rotation**: Tires should be rotated every 5,000 miles (8,000 km).

**Tires**: Check the pressure with a gauge often and always prior to long distance trips. If necessary, adjust the pressure in all tires to the pressure specified. Check carefully for damage, cuts or excessive wear.

**Tire Pressure Monitoring System (TPMS) transmitter components**: Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.

**Wheel alignment and balance**: If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment.

If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.

For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

**Windshield**: Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Have a damaged windshield repaired by a qualified repair facility.

**Wiper blades**: Check for cracks or wear if they do not wipe properly.

**Inside vehicle**

The maintenance items listed here should be checked on a regular basis, such as when performing scheduled maintenance, cleaning the vehicle, etc.

**Accelerator pedal**: Check the pedal for smooth operation and make sure that the pedal does not catch or require uneven effort. Keep the floor mat away from the pedal.

**Brake pedal**: Check the pedal for smooth operation. If the brake pedal suddenly goes down further than normal, the pedal feels spongy or the vehicle seems to take longer to stop, it is recommended that you visit a NISSAN certified LEAF dealer immediately. Keep the floor mat away from the pedal.

**Brakes**: Check that the brakes do not pull the vehicle to one side when applied.

**Electric shift P (Park) position mechanism**: On a steep hill, check that the vehicle is held securely while the vehicle is in the P (Park) position without applying the brakes.

**Parking brake**: Check the parking brake operation regularly. The vehicle should be securely held on a steep hill with only the parking brake applied. If the parking brake cannot keep a vehicle position, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

**Seat**: Check seat position controls such as the seat adjusters, seatback recliners, etc. to ensure that they operate smoothly and that all latches lock securely in every position. Check that the head restraints/headrests move up and down.

**Maintenance and do-it yourself** 8-3
smoothly and that the locks (if so equipped) hold securely in all latched positions.

**Seat belts:** Check that all parts of the seat belt system (for example, buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.

**Steering wheel:** Check for changes in the steering conditions, such as excessive free play, hard steering or strange noises.

**Warning lights and chimes:** Make sure that all warning lights and chimes are operating properly.

**Windshield defroster:** Check that the air emits from the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.

**Windshield wiper and washer***: Check that the wipers and washers operate properly and that the wipers do not streak.

**Under hood and vehicle**
The maintenance items listed here should be checked periodically.

**12-volt battery (for serviceable battery)***:
Check the fluid level in each cell. It should be between the MAX and MIN lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the 12-volt battery fluid level.

**NOTE:**
Care should be taken to avoid situations that can lead to potential battery discharge and potential no-start conditions such as:

1. Installation or extended use of electronic accessories that consume battery power when the engine is not running (Phone chargers, GPS, DVD players, etc.)
2. Vehicle is not driven regularly and/or only driven short distances.

In these cases, the battery may need to be charged to maintain battery health.

**Brake fluid level***:
Make sure that the brake fluid level is between the “MAX” and “MIN” lines on the reservoir.

**Coolant level***:
Check the coolant level when the motor compartment is cold.

**Fluid leaks:** Check under the vehicle for water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks, check for cause and have it corrected immediately.

**Radiator and hoses:** Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure that the hoses have no cracks, deformation, rot or loose connections.

**Underbody:** The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan and frame. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt may accumulate. For additional information, refer to “Cleaning exterior” in the “Appearance and care” section of this manual.

**Windshield-washer fluid***:
Check that there is an adequate amount of fluid in the reservoir.
MAINTENANCE PRECAUTIONS

When performing any inspection or maintenance work on your vehicle, always take care to prevent serious accidental injury to yourself or damage to the vehicle. The following are general precautions that should be closely observed.

**WARNING**

- The EV system uses high voltage up to approximately DC 400 volt. The system can be hot during and after starting and when the vehicle is shut off. Be careful of both the high voltage and the high temperature. Obey the labels that are attached to the vehicle.
- Never disassemble, remove or replace high-voltage parts and cables as well as their connectors. High-voltage cables are colored orange.
- Disassembling, removing or replacing those parts or cables can cause severe burns or electric shock that may result in serious injury or death. The vehicle high-voltage system has no user serviceable parts. Take your vehicle to the NISSAN certified LEAF dealer for any necessary maintenance.
- Park the vehicle on a level surface, apply the parking brake securely and chock the wheels to prevent the vehicle from moving. Push the P (Park) position switch on the shift lever or place the vehicle into the N (Neutral) position.
- If you must work with the EV (Electric vehicle) system is turned on, keep hands, clothing, hair and tools away from moving fans and any other moving parts.
- Make sure that the power switch is in the OFF or LOCK position when performing any part replacement or repairs.
- It is advisable to secure or remove any loose clothing and remove any jewelry, such as rings, watches, etc. before working on your vehicle.
- Always wear eye protection whenever you work on your vehicle.
- Never get under the vehicle while it is supported only by a jack. If it is necessary to work under the vehicle, support it with safety stands.
- Keep smoking materials, flames and sparks away from the 12-volt battery.

**CAUTION**

- Do not work under the hood while the motor compartment is hot. Push the power switch in the OFF position and wait until it cools down.
- Avoid direct contact with used coolant. Improperly disposed coolant and/or other vehicle fluids can damage the environment. Always conform to local regulations for the disposal of vehicle fluids.
- Never connect or disconnect the battery or any transistorized component while the power switch is in the ON position.
- Your vehicle is equipped with an automatic cooling fan. It may come on at any time without warning, even if the power switch is not in the ACC, ON or READY to drive position. To avoid injury, always disconnect the negative 12-volt battery cable before working near the fan.
- Before performing any electrical maintenance work on the vehicle such as the battery, fuses or bulb replacement, confirm the following:
  - The charge connector is removed from the vehicle.
The Climate Ctrl. Timer is not active or operating. For additional information, refer to “Climate Ctrl. Timer” in the “Display screen, heater, air conditioner, audio and phone system” section of this manual.

The 12-volt battery is not being charged by the Li-ion battery and that all charging status indicator lights are off. For additional information, refer to “Charging the 12-volt battery” in the “EV overview” section and “Charging status indicator lights” in the “Charging” section of this manual.

The power switch is in the OFF position. Place the power switch in the ON position and then in the OFF position to prevent the 12-volt battery automatically being charged by the Li-ion battery. For additional information, refer to “Charging the 12-volt battery” in the “EV overview” section of this manual.

The “Maintenance and do-it-yourself” section gives instructions regarding only those items that are relatively easy for an owner to perform.

A Genuine NISSAN Service Manual is also available. For additional information, refer to “Owner’s manual/service manual order information” in the “Technical and consumer information” section of this manual.

You should be aware that incomplete or improper servicing may result in operating difficulties and could affect your warranty coverage. **If in doubt about any servicing, it is recommended that you visit a NISSAN certified LEAF dealer.**
MOTOR COMPARTMENT CHECK LOCATIONS

1. Brake fluid reservoir
2. 12-volt battery
3. Fuse/Fusible link holder
4. Fuse/Fusible link holder
5. Coolant reservoir cap
6. Windshield-washer fluid reservoir
7. Fuse/Fusible link holder
COOLING SYSTEM

The cooling system is filled at the factory with a pre-diluted mixture of 50% Genuine NISSAN Long Life Antifreeze/Coolant (blue) and 50% water to provide year-round antifreeze and coolant protection. The antifreeze solution contains rust and corrosion inhibitors. Additional cooling system additives are not necessary.

**WARNING**

- Never remove the coolant tank cap when the motor compartment is hot. Wait until the motor compartment cools down.
- The coolant tank is equipped with a special type coolant tank cap. To prevent damage to the motor compartment, use only a Genuine NISSAN coolant tank cap.

**CAUTION**

- Never use any additives in the coolant such as radiator sealer in the cooling system. This may cause damage to electrical equipment such as the motor and inverter.
- When adding or replacing coolant, be sure to use only a Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze/Coolant (blue) is pre-diluted to provide antifreeze protection to −34°F (−37°C). If additional freeze protection is needed due to the weather conditions where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufacture’s instructions to maintain minimum antifreeze protection to −34°F (−37°C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent may damage the cooling system.
- The life expectancy of the factory-fill coolant is 125,000 miles (200,000 km) or 15 years. Mixing any other type of coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue), including Genuine NISSAN Long Life Antifreeze/Coolant (green), or the use of non-distilled water will reduce the life expectancy of the factory-filled coolant. For additional information, refer to the NISSAN Service and Maintenance Guide.
CHECKING COOLANT LEVEL

Check the coolant level in the reservoir when the high-voltage parts are cold. If the coolant level is below the MIN level, open the reservoir cap and add coolant up to the MAX level. If the reservoir is empty, check the coolant level in the coolant reservoir when the high-voltage parts are cold. If there is insufficient coolant in the coolant reservoir, fill the coolant reservoir with coolant up to the reservoir cap opening and also add it to the reservoir up to the MAX level. Tighten the cap securely after adding coolant.

For additional information on the location of the coolant reservoir, refer to “Motor compartment check locations” in this section.

If the cooling system frequently requires coolant, it is recommended that you visit a NISSAN certified LEAF dealer.

CHANGING COOLANT

It is recommended that major cooling system repairs should be performed by a NISSAN certified LEAF dealer. The service procedures can be found in the appropriate NISSAN Service Manual.

Improper servicing can result in reduced heater performance.

**WARNING**

- To avoid the danger of being scalded, never change the coolant when the motor compartment is hot.
- Never remove the coolant reservoir cap when the motor compartment is hot. Serious burns could be caused by high-pressure fluid escaping from the radiator.

Avoid direct skin contact with used coolant. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.

Keep coolant out of reach of children and pets.

Coolant must be disposed of properly. Check your local regulations.
REDUCTION GEAR FLUID
When checking or replacement is required, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

⚠️ CAUTION
- Use only Genuine NISSAN Matic S ATF. Do not mix with other fluids.
- Using reduction gear fluid other than Genuine NISSAN Matic S ATF will cause deterioration in driveability and reduction gear durability, and may damage the reduction gear, which is not covered by the NISSAN New Vehicle Limited Warranty.

BRAKE FLUID
For additional brake fluid information, refer to "Recommended fluids/lubricants and capacities" in the "Technical and consumer information" section of this manual.

⚠️ WARNING
- Use only new fluid from a sealed container. Old, inferior or contaminated fluid may damage the brake system. The use of improper fluids can damage the brake system, and affect the vehicle's stopping ability.
- Clean the filler cap before removing.
- Brake fluid is poisonous and should be stored carefully in marked containers out of the reach of children.

⚠️ CAUTION
Do not spill the fluid on any painted surfaces. This will damage the paint. If fluid is spilled, immediately wash the surface with water.

Check the fluid level in the reservoir. If the fluid is below the MIN line B or the brake warning light illuminates, add Genuine NISSAN Super Heavy Duty Brake Fluid or equivalent DOT 3 fluid up to the MAX line A. If fluid must be added frequently, the system should be checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.
**WINDSHIELD-WASHER FLUID**

**Except for Canada**

To check the fluid level, use your finger to plug the center hole ① of the cap/tube assembly, then remove it from the reservoir. If there is no fluid in the tube, add fluid.

**For Canada**

Fill the windshield-washer fluid reservoir periodically. Add windshield-washer fluid when the low washer fluid message appears on the vehicle information display. For additional information, refer to “Indicators for operation” in the “Instruments and controls” section of this manual.

To fill the windshield-washer fluid reservoir, lift the cap ① and pour the windshield-washer fluid into the reservoir opening.

Add a windshield-washer solvent to the reservoir for better cleaning. In the winter season, add a windshield-washer antifreeze. Follow the manufacturer’s instructions for the mixture ratio.

Fill the windshield-washer fluid reservoir periodically.

Refill the reservoir more frequently when driving conditions require an increased amount of windshield-washer fluid.

Recommended fluid:

Genuine NISSAN Windshield-Washer Concentrate Cleaner & Antifreeze or equivalent

---

**CAUTION**

- Do not substitute antifreeze coolant for windshield-washer solution. This may result in damage to the paint.
- Do not fill the windshield-washer reservoir with windshield-washer fluid concentrates at full strength. Some methyl alcohol based windshield-washer fluid concentrates may permanently stain the grille if spilled while filling the windshield-washer reservoir.
- Pre-mix windshield-washer fluid concentrates with water to the manufacturer’s recommended levels before pouring the fluid into the windshield-washer reservoir. Do not use the windshield-washer reservoir to mix the windshield-washer fluid concentrate and water.
12-VOLT BATTERY
• Keep the 12-volt battery surface clean and dry. Clean the 12-volt battery with a solution of baking soda and water.
• Make certain the terminal connections are clean and securely tightened.

NOTE:
Care should be taken to avoid situations that can lead to potential battery discharge and potential no-start conditions such as:
1. Installation or extended use of electronic accessories that consume battery power when the motor is not running (Phone chargers, GPS, DVD players, etc.)
2. Vehicle is not driven regularly and/or only driven short distances. In these cases, the battery may need to be charged to maintain battery health

WARNING
• Do not expose the 12-volt battery to flames or electrical sparks. Hydrogen gas generated by the 12-volt battery is explosive. Do not allow 12-volt battery fluid to contact your skin, eyes, fabrics or painted surfaces. After touching a 12-volt battery or 12-volt battery cap, do not touch or rub your eyes. Thoroughly wash your hands. If the acid contacts your eyes, skin or clothing, immediately flush with water for at least 15 minutes and seek medical attention.
• Do not operate the vehicle if the fluid in the 12-volt battery is low. Low 12-volt battery fluid can cause a higher load on the 12-volt battery which can generate heat, reduce battery life, and in some cases lead to an explosion.
• When working on or near a 12-volt battery, always wear suitable eye protection and remove all jewelry.
• 12-volt battery posts, terminals and related accessories contain lead and lead compounds. Wash hands after handling.
• Keep the 12-volt battery out of the reach of children.

1. Remove the vent caps with a screwdriver as shown. Use a cloth to protect the battery case.
2. Check the fluid level in each cell. If it is necessary to add fluid, add only distilled water to bring the level up to the bottom of the filler opening. **Do not overfill.** Reinstall the vent caps.

Vehicles operated in high temperatures or under severe conditions require frequent checks of the 12-volt battery fluid level.

**JUMP STARTING**

Jump starting provides power to the 12 volt system to allow the electrical systems to operate. The electrical systems must be operating to allow the Li-ion battery to be charged. Jump starting does not charge the Li-ion battery. The Li-ion battery must be charged before the vehicle can be driven.

For additional information, refer to “Jump starting” in the “In case of emergency” section of this manual. If the power switch does not switch to the READY to drive position by jump starting, the 12-volt battery may have to be replaced. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**WINDSHIELD WIPER BLADES CLEANING**

If your windshield is not clear after using the windshield washer or if a wiper blade chatters when running, wax or other material may be on the blade or windshield.

Clean the outside of the windshield with a washer solution or a mild detergent. Your windshield is clean if beads do not form when rinsing with clear water.

Clean each blade by wiping it with a cloth soaked in a washer solution or a mild detergent. Then rinse the blade with clear water. If your windshield is still not clear after cleaning the blades and using the wiper, replace the blades.

**CAUTION**

Worn windshield wiper blades can damage the windshield and impair driver vision.
REPLACING

Replace the wiper blades if they are worn.

Pulling up the wiper arm

The wiper arm should be in the up position when replacing the wiper.

Pull up the wiper arm manually or using the wiper rise-up function.

Wiper rise-up function:

To pull up the wiper arm, pull the lever 1 within 1 minute after the power switch is turned off. The wiper operation stops in mid-operation and wiper arm can be pulled up.

To lower the wiper arm, place the wiper arm in the down position and then push the lever 2 up once after the power switch is turned on.

CAUTION

Do not operate the windshield wiper while arm is pulled up. The wiper arm or hood may be damaged.
Replacing

1. Push the release tab A, and move the wiper blade down the wiper arm B while pushing the release tab to remove.
2. Insert the new wiper blade onto the wiper arm until a click sounds.
3. Rotate the wiper blade so that the dimple is in the groove.

**CAUTION**

- After wiper blade replacement, return the wiper arm to its original position; otherwise it may be damaged when the hood is opened.
- Make sure the wiper blades contact the glass; otherwise the arm may be damaged from wind pressure.

Be careful not to clog the washer nozzle A. This may cause improper windshield washer operation. If the nozzle is clogged, remove any objects with a needle or small pin B. Be careful not to damage the nozzle.

*Maintenance and do-it yourself* 8-15
REAR WINDOW WIPER BLADE
It is recommended that you visit a NISSAN certified LEAF dealer if checking or replacement is required.

BRAKES
If the brakes do not operate properly, have the brakes checked. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

**WARNING**
Do not adjust the height of the brake pedal. Doing so could alter the effectiveness of the brakes, which could result in a serious accident and personal injury. If adjustment is required, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

BRAKE PAD WEAR WARNING
The disc brake pads have audible wear warnings. When a brake pad requires replacement, it will make a high pitched scraping sound when the vehicle is in motion. This scraping sound will first occur only when the brake pedal is depressed. After more wear of the brake pad, the sound will always be heard even if the brake pedal is not depressed. Have the brakes checked as soon as possible if the wear warning sound is heard.

Under some driving or climate conditions, occasional brake squeak, squeal or other noise may be heard. Occasional brake noise during light to moderate stops is normal and does not affect the function or performance of the brake system.

**Proper brake inspection intervals should be followed.** For additional information, refer to the maintenance log section of your NISSAN Service and Maintenance Guide.

8-16 Maintenance and do-it yourself
MOTOR COMPARTMENT

WARNING

• Never touch, disassemble, remove or replace the high-voltage parts and cables, as well as their connectors. High-voltage cables are colored orange. Touching, disassembling, removing or replacing those parts and cables can cause severe burns or electric shock that may result in serious injury or death.

• Never use a fuse of a higher or lower amperage rating than that specified on the fuse box cover. This could damage the electrical system or electronic control units or cause a fire.

If any electrical equipment does not operate, check for an open fuse.

1. Confirm that the power switch and the headlight switch are turned off.
2. Open the hood.

3. Remove the fuse/fusible link holder cover by pushing the tab and lifting the cover from the right side, and then the left side.
4. Locate the fuse that needs to be replaced.
5. Remove the fuse using the fuse puller located in the passenger compartment fuse box.

FUSES

Maintenance and do-it yourself 8-17
6. If the fuse is open \(A\), replace it with a new fuse \(B\).

7. If a new fuse also opens, have the electrical system checked, and if necessary, repaired. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

Fusible links
If any electrical equipment does not operate and the fuses are in good condition, check the fusible links in the holders \(1\), \(2\) and \(3\). If any of these fusible links are melted, replace only with Genuine NISSAN parts.

For checking and replacing the fusible links in the holders \(1\), \(2\) and \(3\), it is recommended that you visit a NISSAN certified LEAF dealer for this service.
Never use a fuse of a higher or lower amperage rating than that specified on the fuse box cover. This could damage the electrical system or electronic control units or cause a fire.

If any electrical equipment does not operate, check for an open fuse.

1. Make sure that the power switch and the headlight switch are turned off.

2. Insert a screwdriver wrapped with the cloth into the slit.

3. Then pull to remove the fuse box cover.

4. Remove the fuse with the fuse puller.

5. If the fuse is open, replace it with a new fuse.

6. If a new fuse also opens, have the electrical system checked, and if necessary repaired. It is recommended that you visit a NISSAN certified LEAF dealer for this service.

Maintenance and do-it yourself 8-19
NISSAN INTELLIGENT KEY®
BATTERY REPLACEMENT

**CAUTION**
- Be careful not to allow children to swallow the battery and removed parts.
- An improperly disposed battery can harm the environment. Always confirm local regulations for battery disposal.
- When changing batteries, do not let dust or oil get on the components.
- There is danger of explosion if the lithium battery is incorrectly replaced. Replace only with the same or equivalent type.

Replace the battery in the Intelligent Key as follows:
1. Remove the mechanical key from the Intelligent Key.
2. Insert a small screwdriver into the slit of the corner and twist it to separate the upper part from the lower part. Use a cloth to protect the casing.
3. Replace the battery with a new one.

Recommended battery:
CR2025 or equivalent
- Do not touch the internal circuit and electric terminals as doing so could cause a malfunction.
- Hold the battery by the edges. Holding the battery across the contact points will seriously deplete the storage capacity.
- Make sure that the ⊕ side faces the bottom of the case.
4. Align the tips of the upper and lower parts (1), and then push them together (2) until it is securely closed.

5. Operate the buttons to check that it is functioning properly.

It is recommended that you visit a NISSAN certified LEAF dealer for this service.

FCC Notice:

For USA:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For Canada:

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
1. Headlight assembly
2. Map light
3. Room light
4. High-mounted stop light
5. Rear combination light
6. Cargo light
7. License plate light
8. Side marker light
9. Fog light (if so equipped)

Fog may temporarily form inside the lens of the exterior lights in the rain or in a car wash. A temperature difference between the inside and the outside of the lens causes the fog. This is not a malfunction. If large drops of water collect inside the lens, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

HEADLIGHTS
For additional information on headlight bulb replacement refer to the instructions outlined in this section.

Replacing

Halogen headlight (high-beam):
The headlight high-beam is a semi-sealed beam type that uses a replaceable headlight (halogen) bulb.
CAUTION

- Do not leave the bulb out of the headlight reflector for a long period of time. Dust, moisture, smoke, etc. entering the headlight body may affect bulb performance.
- High-pressure halogen gas is sealed inside the halogen bulb. The bulb may break if the glass envelope is scratched or the bulb is dropped.
- Only touch the base when handling the bulb. Never touch the glass envelope. Touching the glass envelope could significantly affect bulb life and/or headlight performance.
- Aiming is not necessary after replacing the bulb. When aiming adjustment is necessary, it is recommended that you visit a NISSAN certified LEAF dealer for this service.
- Fog may temporarily form inside the lens of the exterior lights in the rain or in a car wash. A temperature difference between the inside and the outside of the lens causes the fog. This is not a malfunction. If large drops of water collect inside the lens, it is recommended that you visit a NISSAN certified LEAF dealer for this service.

Type A (if so equipped)
Use the same number and wattage as originally installed as shown in the chart.
Disconnect the battery negative cable before replacing bulbs.
1. Remove the connector ①.
2. Turn the headlight bulb, and then remove the bulb ②.

Type B (if so equipped)
Disconnect the battery negative cable before replacing bulbs.
1. Remove the connector ①.
2. Turn the headlight bulb, and then remove the bulb ②.

*It is recommended that you visit a NISSAN certified LEAF dealer for replacement.

### Replacement procedures

All other lights are either type A, B, C, D or E. When replacing a bulb, first remove the lens and/or cover.

### NOTE:

Always check with the Parts Department at a NISSAN certified LEAF dealer for the latest information about parts.
Front turn signal light

Clearance light (if so equipped)

License plate light

Maintenance and do-it yourself  8-25
1. Remove the rear combination attachment bolt ①.
2. Pull the rear combination assembly evenly toward rear of the vehicle ②.
3. Turn the bulb socket and then remove the bulb ③.

If you have a flat tire, refer to “Flat tire” in the “In case of emergency” section.

TIRE PRESSURE
Tire Pressure Monitoring System (TPMS)
This vehicle is equipped with the Tire Pressure Monitoring System (TPMS). It monitors tire pressure of all tires. When the low tire pressure warning light is lit, and the CHECK TIRE PRESSURE warning appears on the vehicle information
display, one or more of your tires is significantly under-inflated.

The TPMS will activate only when the vehicle is driven at speeds above 16 mph (25 km/h). Also, this system may not detect a sudden drop in tire pressure (for example a flat tire while driving).

For additional information, refer to “Low tire pressure warning light” in the “Instruments and controls” section, “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section and “Tire Pressure Monitoring System (TPMS)” in the “In case of emergency” section of this manual.

Tire inflation pressure
Check the pressure of the tires often and always prior to long distance trips. The recommended tire pressure specifications are shown on the F.M.V.S.S/ C.M.V.S.S certification label or Tire and Loading Information label under the “Cold Tire Pressure” heading. The Tire and Loading Information label is affixed to the driver side center pillar. Tire pressures should be checked regularly because:
- Most tires naturally lose air over time.
- Tires can lose air suddenly when driven over potholes or other objects or if the vehicle strikes a curb while parking.

The tire pressures should be checked when the tires are cold. The tires are considered COLD after the vehicle has been parked for 3 or more hours, or driven less than 1 mile (1.6 km) at moderate speeds.

The TPMS with Easy-Fill Tire Alert also provides visual and audible signals outside the vehicle for inflating the tires to the recommended COLD tire pressure. For additional information, refer to “TPMS with Easy-Fill Tire Alert” in the “Starting and driving” section of this manual.

Incorrect tire pressure, including under inflation, may adversely affect tire life and vehicle handling.

![WARNING]

- Improperly inflated tires can fail suddenly and cause an accident.
- The Gross Vehicle Weight rating (GVWR) is located on the F.M.V.S.S./C.M.V.S.S certification label. The vehicle weight capacity is indicated on the Tire and Loading Information label. Do not load your vehicle beyond this capacity. Overloading your vehicle may result in reduced tire life, unsafe operating conditions due to premature tire failure, or unfavorable handling characteristics and could also lead to a serious accident. Loading beyond the specified capacity may also result in failure of other vehicle components.
Before taking a long trip, or whenever you heavily load your vehicle, use a tire pressure gauge to ensure that the tire pressures are at the specified level.

* For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

![Tire and Loading Information Label](image)

<table>
<thead>
<tr>
<th>Seating Capacity</th>
<th>Original Size</th>
<th>Cold Tire Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>The maximum number of occupants that can be seated in the vehicle.</td>
<td>The size of the tires originally installed on the vehicle at the factory.</td>
<td>Inflate the tires to this pressure when the tires are cold. Tires are considered COLD after the vehicle has been parked for 3 or more hours, or driven less than 1 mile (1.6 km) at moderate speeds.</td>
</tr>
</tbody>
</table>

The recommended cold tire inflation is set by the manufacturer to provide the best balance of tire wear, vehicle handling, driveability, tire noise, etc., up to the vehicle’s GVWR.

- Tire size — refer to “Tire labeling” in this section.
- Spare tire size or compact spare tire size (if so equipped)
- Vehicle load limit: For additional information, refer to “Vehicle loading information” in the “Technical and consumer information” section of this manual.

8-28 Maintenance and do-it yourself
Checking tire pressure

1. Remove the valve stem cap from the tire.
2. Press the pressure gauge securely onto the valve stem. Do not press too hard or force the valve stem sideways, otherwise air will escape. If the hissing sound of air escaping from the tire is heard while checking the pressure, reposition the gauge to eliminate this leakage.

3. Remove the gauge.
4. Read the tire pressure on the gauge stem and compare it to the specification shown on the Tire and Loading Information label.
5. Add air to the tire as necessary. If too much air is added, press the core of the valve stem briefly with the tip of the gauge stem to release pressure. Recheck the pressure and add or release air as necessary.
6. Install the valve stem cap.

<table>
<thead>
<tr>
<th>SIZE</th>
<th>COLD TIRE INFLATION PRESSURE</th>

</tr>
<tr>
<td>REAR ORIGINA L TIRE</td>
<td>P215/50R17 90V</td>
</tr>
</tbody>
</table>

7. Check the pressure of all of the tires.
TIRE LABELING

Federal law requires tire manufacturers to place standardized information on the sidewall of all tires. This information identifies and describes the fundamental characteristics of the tire and also provides the tire identification number (TIN) for safety standard certification. The TIN can be used to identify the tire in case of a recall.

1. P: The “P” indicates the tire is designed for passenger vehicles. (Not all tires have this information.)
2. Three-digit number (215): This number gives the width in millimeters of the tire from sidewall edge to sidewall edge.
3. Two-digit number (60): This number, known as the aspect ratio, gives the tire’s ratio of height to width.
4. R: The “R” stands for radial.
5. Two-digit number (16): This number is the wheel or rim diameter in inches.
6. Two- or three-digit number (94): This number is the tire’s load index. It is a measurement of how much weight each tire can support. You may not find this information on all tires because it is not required by law.
7. H: Tire speed rating. You should not drive the vehicle faster than the tire speed rating.

Example

- Tire size (example: P215/60R16 94H)
- P: The “P” indicates the tire is designed for passenger vehicles. (Not all tires have this information.)
- Three-digit number (215): This number gives the width in millimeters of the tire from sidewall edge to sidewall edge.
2. DOT (Tire Identification Number) for a new tire (example: DOT XX XX XXX XXX)

1. DOT: Abbreviation for the “Department of Transportation”. The symbol can be placed above, below or to the left or right of the Tire Identification Number.
2. Two-digit code: Manufacturer’s identification mark
3. Two-digit code: Tire size
4. Three-digit code: Tire type code (Optional)
5. Four numbers represent the week and year the tire was built. For example, the numbers 3103 means the 31st week of 2003. If these numbers are missing, then look on the other sidewall of the tire.
3. Tire ply composition and material
   The number of layers or plies of rubber-coated fabric in the tire. Tire manufacturers also must indicate the materials in the tire, which include steel, nylon, polyester, and others.
4. Maximum permissible inflation pressure
   This number is the greatest amount of air pressure that should be put in the tire. Do not exceed the maximum permissible inflation pressure.
5. Maximum load rating
   This number indicates the maximum load in kilograms and pounds that can be carried by the tire. When replacing the tires on the vehicle, always use a tire that has the same load rating as the factory installed tire.
6. Term of “tubeless” or “tube type”
   Indicates whether the tire requires an inner tube (“tube type”) or not (“tubeless”).
7. The word “radial”
   The word “radial” is shown, if the tire has radial structure.
8. Manufacturer or brand name
   Manufacturer or brand name is shown.

Example

DOT XX XX XXX XXXX

</tr>
</tbody>
</table>
Other tire-related terminology:
In addition to the many terms that are defined throughout this section, Intended Outboard Sidewall is (1) the sidewall that contains a whitewall, bears white lettering or bears manufacturer, brand and/or model name molding that is higher or deeper than the same molding on the other sidewall of the tire, or (2) the outward facing sidewall of an asymmetrical tire that has a particular side that must always face outward when mounted on a vehicle.

TYPES OF TIRES

WARNING

- When changing or replacing tires, be sure all four tires are of the same type (Example: Summer, All Season or Snow) and construction. A NISSAN certified LEAF dealer may be able to help you with information about tire type, size, speed rating and availability.

Replacement tires may have a lower speed rating than the factory equipped tires, and may not match the potential maximum vehicle speed. Never exceed the maximum speed rating of the tire.
- Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.
- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

All season tires
NISSAN specifies all season tires on some models to provide good performance all year, including snowy and icy road conditions. All Season tires are identified by ALL SEASON and/or M&S (Mud and Snow) on the tire sidewall. Snow tires have better snow traction than All Season tires and may be more appropriate in some areas.

Summer tires
NISSAN specifies summer tires on some models to provide superior performance on dry roads. Summer tire performance is substantially reduced in snow and ice. Summer tires do not have the tire traction rating M&S on the tire sidewall.

Snow tires
If snow tires are needed, it is necessary to select tires equivalent in size and load rating to the original equipment tires. If you do not, it can adversely affect the safety and handling of your vehicle.

Generally, snow tires will have lower speed ratings than factory equipped tires and may not match the potential maximum vehicle speed. Never exceed the maximum speed rating of the tire.

If you install snow tires, they must be the same size, brand, construction and tread pattern on all four wheels.

For additional traction on icy roads, studded tires may be used. However, some U.S. states and Canadian provinces prohibit their use. Check local, state and provincial laws before installing studded tires. Skid and traction capabilities of studded snow tires, on wet or dry surfaces, may be poorer than that of non-studded snow tires.
TIRE CHAINS

Use of tire chains may be prohibited according to location. Check the local laws before installing tire chains. When installing tire chains, make sure they are the proper size for the tires on your vehicle and are installed according to the chain manufacturer’s suggestions.

**Use only SAE Class S chains.** Class “S” chains are used on vehicles with restricted tire to vehicle clearance. Vehicles that can use Class “S” chains are designed to meet the SAE standard minimum clearances between the tire and the closest vehicle suspension or body component required to accommodate the use of a winter traction device (tire chains or cables). The minimum clearances are determined using the factory equipped tire size. Other types may damage your vehicle.

Use chain tensioners when recommended by the tire chain manufacturer to ensure a tight fit. Loose end links of the tire chain must be secured or removed to prevent the possibility of whipping action damage to the fenders or underbody. If possible, avoid fully loading your vehicle when using tire chains. In addition, drive at a reduced speed. Otherwise, your vehicle may be damaged and/or vehicle handling and performance may be adversely affected.

**Tire chains must be installed only on the front wheels and not on the rear wheels.**

Do not use tire chains on dry roads. Driving with tire chains in such conditions can cause damage to the various mechanisms of the vehicle due to some overstress.

CHANGING WHEELS AND TIRES

Tire rotation
NISSAN recommends rotating the tires every 5,000 miles (8,000 km).

**As soon as possible, tighten the wheel nuts to the specified torque using a torque wrench.**

Wheel nut tightening torque:
83 ft-lb (112 N·m)

Maintenance and do-it yourself  8-33
The wheel nuts must be kept tightened to the specification at all times. It is recommended that wheel nuts be tightened to the specification at each tire rotation interval.

**WARNING**
- After rotating the tires, check and adjust the tire pressure.
- Retighten the wheel nuts when the vehicle has been driven for 600 miles (1,000 km) (also in cases of a flat tire, etc.).
- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

![Tire wear and damage diagram]

Tire wear and damage
1. Wear indicator
2. Wear indicator location mark

**WARNING**
- Tires should be periodically inspected for wear, cracking, bulging or objects caught in the tread. If excessive wear, cracks, bulging or deep cuts are found, the tire(s) should be replaced.
- The original tires have built-in tread wear indicators. When wear indicators are visible, the tire(s) should be replaced.
- Tires degrade with age and use. Have tires, over 6 years old checked by a qualified technician, because some tire damage may not be obvious. Replace the tires as necessary to prevent tire failure and possible personal injury.
- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

Replacing wheels and tires
When replacing a tire, use the same size, tread design, speed rating and load carrying capacity as originally equipped. For additional information, refer to “Specifications” in the “Technical and consumer information” section of this manual for recommended types and sizes of tires and wheels.
WARNING

- The use of tires other than those recommended or the mixed use of tires of different brands, construction (bias, bias-belted or radial), or tread patterns can adversely affect the ride, braking, handling, Vehicle Dynamic Control (VDC) system, ground clearance, body-to-tire clearance, tire chain clearance, speedometer calibration, headlight aim and bumper height. Some of these effects may lead to accidents and could result in serious personal injury.
- If your vehicle was originally equipped with four tires that were the same size and you are only replacing two of the four tires, install the new tires on the rear axle. Placing new tires on the front axle may cause loss of vehicle control in some driving conditions and cause an accident and personal injury.
- If the wheels are changed for any reason, always replace with wheels which have the same off-set dimension. Wheels of a different off-set could cause premature tire wear, degrade vehicle handling characteristics, affect the VDC system and/or interference with the brake discs. Such interference can lead to decreased braking efficiency and/or early brake pad/shoe wear. For additional information on wheel-off set dimensions, refer to “Wheels and tires” in the “Technical and consumer information” section of this manual.
- When replacing a wheel without the TPMS such as the spare tire, TPMS will not function when a wheel is replaced, the TPMS will not function and the low tire pressure warning light will flash for approximately 1 minute. The light will remain on after 1 minute. It is recommended that you visit a NISSAN certified LEAF dealer for service.
- Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.
- The TPMS sensor may be damaged if it is not handled correctly. Be careful when handling the TPMS sensor.
- When replacing the TPMS sensor, the ID registration may be required. It is recommended that you visit a NISSAN certified LEAF dealer for ID registration.
- Do not use a valve stem cap that is not specified by NISSAN. The valve stem cap may become stuck.
- Be sure that the valve stem caps are correctly fitted. Otherwise the valve may be clogged up with dirt and cause a malfunction or loss of pressure.
- Do not install a damaged or deformed wheel or tire even if it has been repaired. Such wheels or tires could have structural damage and could fail without warning.
- The use of retread tire is not recommended.
- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.
Wheel balance

Unbalanced wheels may affect vehicle handling and tire life. Even with regular use, wheels can get out of balance. Therefore, they should be balanced as required.

**Wheel balance service should be performed with the wheels off the vehicle. Spin balancing the wheels on the vehicle could lead to mechanical damage.**

For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

Care of wheels

For additional information on care of wheels, refer to “Cleaning exterior” in the “Appearance and care” section of this manual.

---

EMERGENCY TIRE PUNCTURE REPAIR KIT

The emergency tire puncture repair kit (Emergency Tire Sealant) is supplied with the vehicle instead of a spare tire. It can be used to temporarily repair minor tire punctures.

If possible, have the vehicle towed to a facility that can repair or replace the flat tire. Using the emergency tire puncture repair kit may cause a malfunction of the tire pressure sensor and cause the low tire pressure warning light to illuminate.

For additional information, refer to “Flat tire” in the “In case of emergency” section of this manual.

9-2  Technical and consumer information
The refrigerant, HFC-134a (R-134a), in your NISSAN vehicle will not harm the earth’s ozone layer. Although this refrigerant does not affect the earth's atmosphere, certain governmental regulations require the recovery and recycling of any refrigerant during automotive air conditioning system service. A NISSAN certified LEAF dealer has the trained technicians and equipment needed to recover and recycle your air conditioning system refrigerant.

It is recommended that you visit a NISSAN certified LEAF dealer when servicing your air conditioning system.

The air conditioning system in your NISSAN vehicle must be charged with the refrigerant, HFC-134a (R-134a), and the compressor oil, ND-OIL11 (with heater pump), AE10 (without heater pump) or the equivalent.

**CAUTION**

The use of any other refrigerant or oil will cause severe damage to the air conditioning system and will require the replacement of all air conditioner system components.
CHARGING SYSTEM

Rated input voltage
AC120V (single phase), AC240V (single phase)

Rated input frequency
60Hz

Maximum rated current
12A AC120V, 18A (AC240V), 32A (AC220V; if so equipped)

Charging modes/Types of connection
AC Level 2 (Normal charge with home installation type EVSE (Electric Vehicle Supply Equipment))
DC Charging (Quick charge)

Required installation (over current protection)
The methods of protection against over current and over voltage shall be in accordance with national codes. Suitable over current protection devices for the wiring of houses or buildings shall be installed.

IP Degree
IP55: EV (Electric Vehicle) charging port in road position

Operating temperature
Same as vehicle operating temperature

Storage temperature
Same as vehicle storage temperature

Rated input voltage
AC220V (single phase), AC240V (single phase)

Rate input frequency
60Hz

Applicable standards
SAE J1772: 2010
EN61851-1: 2011
EN61851-21: 2002
IEC61851-1: 2010
IEC61851-21: 2001

Adapters
Do not use an extension cable or electrical adaptor.

WHEN TRAVELING OR REGISTERING IN ANOTHER COUNTRY

When planning to travel in another country, you should first find out if the charging equipment is compatible with that country's electrical system.

When transferring the registration of your vehicle to another country, state, province or district, it may be necessary to modify the vehicle to meet local laws and regulations.

The laws and regulations for motor vehicle safety standards vary according to the country, state, province or district; therefore, vehicle specifications may differ.

When any vehicle is to be taken into another country, state, province or district and registered, its modifications, transportation, and registration are the responsibility of the user. NISSAN is not responsible for any inconvenience that may result.

VEHICLE IDENTIFICATION

VEHICLE IDENTIFICATION NUMBER (VIN) PLATE
The vehicle identification number plate is attached as shown. This number is the identification for your vehicle and is used in the vehicle registration.

VEHICLE IDENTIFICATION NUMBER (CHASSIS NUMBER)
The vehicle identification number is located as shown.
Remove the cover to access the number.
The serial number of the traction motor is stamped on the traction motor as shown.

The Federal/Canadian Motor Vehicle Safety Standards (F.M.V.S.S./C.M.V.S.S.) certification label is affixed as shown. This label contains valuable vehicle information, such as: Gross Vehicle Weight Ratings (GVWR), Gross Axle Weight Rating (GAWR), month and year of manufacture, Vehicle Identification Number (VIN), etc. Review it carefully.

The emission control information label is attached to the underside of the hood as shown in the illustration.
TIRE AND LOADING INFORMATION LABEL
The cold tire pressure is shown on the Tire and Loading Information label affixed to the driver's side center pillar as shown.

AIR CONDITIONER SPECIFICATION LABEL
The air conditioner specification label is attached to the underside of the hood as shown in the illustration.

INSTALLING FRONT LICENSE PLATE
Perform the following procedure to mount the license plate.
Before mounting the license plate, confirm that the following parts are enclosed in the plastic bag.
• License plate bracket ①
• Screw ×2
1. Adjust the license plate bracket ① at the location (small dimples).
2. Mark along both sides of the mounting holes and license plate screw holes using a felt-tip pen.
3. Remove the license plate bracket ① and connect the arcs from the ovals. Mark the point in the center of each oval. These are the screw installation locations.

4. Install the license plate with two 0.23 in (6 mm) screws.

**WARNING**

- It is extremely dangerous to ride in the cargo area inside the vehicle. In a collision, people riding in these areas are more likely to be seriously injured or killed.
- Do not allow people to ride in any area of your vehicle that is not equipped with seats and seat belts.
- Be sure everyone in your vehicle is in a seat and using a seat belt properly.

**TERMS**

It is important to familiarize yourself with the following terms before loading your vehicle:

- Curb Weight (actual weight of your vehicle) - vehicle weight including: standard and optional equipment, fluids and emergency tools. This weight does not include passengers and cargo.

- GVW (Gross Vehicle Weight) - curb weight plus the combined weight of passengers and cargo.

- GVWR (Gross Vehicle Weight Rating) - maximum total combined weight of the unloaded vehicle, passengers, luggage, hitch, trailer tongue load and any other optional equipment. This information is located on the F.M.V.S.S./C.M.V.S.S. label.

- GAWR (Gross Axle Weight Rating) - maximum weight (load) limit specified for the front or rear axle.

- This information is located on the F.M.V.S.S./C.M.V.S.S. label.

- GCWR (Gross Combined Weight Rating) - The maximum total weight rating of the vehicle, passengers, cargo, and trailer.

- Vehicle Capacity Weight, Load limit, Total load capacity - maximum total weight limit specified of the load (passengers and cargo) for the vehicle. This is the

**Technical and consumer information** 9-9
maximum combined weight of occupants and cargo that can be loaded into the vehicle. If the vehicle is used to tow a trailer, the trailer tongue weight must be included as part of the cargo load. This information is located on the Tire and Loading Information label.

- Cargo capacity - permissible weight of cargo, the subtracted weight of occupants from the load limit.

VEHICLE LOAD CAPACITY
Do not exceed the load limit of your vehicle shown as “The combined weight of occupants and cargo” on the Tire and Loading Information label. Do not exceed the number of occupants shown as “Seating Capacity” on the Tire and Loading Information label.

To get “the combined weight of occupants and cargo”, add the weight of all occupants, then add the total luggage weight. Examples are shown in the following illustration.
Steps for determining correct load limit

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs” on your vehicle’s Tire and Loading Information label.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the XXX amount equals 1400 lbs. and there will be five 150 lb. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 − 750 (5 x 150) = 650 lbs) or (640 − 340 (5 x 70) = 300 kg.)

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

Before driving a loaded vehicle, confirm that you do not exceed the Gross Vehicle Weight Rating (GVWR) or the Gross Axle Weight Rating (GAWR).
Weight Rating (GAWR) for your vehicle. For additional information, refer to “Measurement of weights” in this section.
Also check tires for proper inflation pressures. For additional information, refer to the “Tire and Loading Information label” in this section.

LOADING TIPS

• The GVW must not exceed the GVWR or GAWR as specified on the F.M.V.S.S./C.M.V.S.S. certification label.
• Do not load the front and rear axle to the GAWR. Doing so will exceed the GVWR.

WARNING

• Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

• Do not load your vehicle any heavier than the GVWR or the maximum front and rear GAWRs. If you do, parts of your vehicle can break, tire damage could occur, or it can change the way your vehicle handles. This could result in loss of control and cause personal injury.

• Overloading not only can shorten the life of your vehicle and the tire, but can cause unsafe vehicle handling and longer braking distances. This may cause a premature tire failure, which could result in a serious accident and personal injury. Failures caused by overloading are not covered by the vehicle's warranty.

MEASUREMENT OF WEIGHTS

Secure loose items to prevent weight shifts that could affect the balance of your vehicle. When the vehicle is loaded, drive to a scale and weigh the front and the rear wheels separately to determine axle loads. Individual axle loads should not exceed either of the Gross Axle Weight Ratings (GAWR). The total of the axle loads should not exceed the Gross Vehicle Weight Rating (GVWR). These ratings are given on the vehicle certification label. If weight ratings are exceeded, move or remove items to bring all weights below the ratings.
TOWING A TRAILER
Do not tow a trailer with your vehicle.

FLAT TOWING
Towing your vehicle with all four wheels on the ground is sometimes called flat towing. This method is typically used when towing a vehicle behind a recreational vehicle, such as a motor home.

CAUTION
• Failure to follow these guidelines can result in severe reduction gear damage.
• DO NOT tow this vehicle with all four wheels on the ground (flat towing).
• For emergency towing procedures refer to “Towing your vehicle” in the “In case of emergency” section of this manual.

UNIFORM TIRE QUALITY GRADING
DOT (Department Of Transportation) Quality Grades: All passenger car tires must conform to federal safety requirements in addition to these grades.

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width. For example:
Treadwear 200 Traction AA Temperature A

TREADWEAR
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon actual conditions of their use however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

TRACTION AA, A, B AND C
The traction grades, from highest to lowest, are AA, A, B and C. Those grades represent the tire’s ability to stop on wet pavement as measured
under controlled conditions on specified govern-
ment test surfaces of asphalt and concrete. A tire
marked C may have poor traction performance.

**WARNING**
The traction grade assigned to this tire is
based on straight-ahead braking traction
tests, and does not include acceleration,
cornering, hydroplaning, or peak traction
characteristics.

**TEMPERATURE A, B AND C**
The temperature grades A (the highest), B, and
C, representing the tire’s resistance to the gen-
eration of heat and its ability to dissipate heat
when tested under controlled conditions on a
specified indoor laboratory test wheel. Sustained
high temperature can cause the material of the
tire to degenerate and reduce tire life, and exces-
sive temperature can lead to sudden tire failure.
The grade C corresponds to a level of perfor-
ance which all passenger car tires must meet
under the Federal Motor Vehicle Safety Standard
No. 109. Grades B and A represent higher levels
of performance on the laboratory test wheel than
the minimum required by law.

---

**REPORTING SAFETY DEFECTS**

*For USA*

If you believe that your vehicle has a de-
fect which could cause a crash or could
cause injury or death, you should immedi-
ately inform the National Highway Traffic
Safety Administration (NHTSA) in addi-
tion to notifying NISSAN.

If NHTSA receives similar complaints, it
may open an investigation, and if it finds
that a safety defect exists in a group of
vehicles, it may order a recall and remedy
campaign. However, NHTSA cannot be-
come involved in individual problems be-
tween you, your dealer, or NISSAN.

To contact NHTSA, you may call the
Vehicle Safety Hotline toll-free at
1-888-327-4236
(TTY: 1-800-424-9153);
go to http://www.safercar.gov; or write to:
Administrator, NHTSA, 400 Seventh
Street, SW., Washington, D.C. 20590.
You can also obtain other information
about motor vehicle safety from http://
www.safercar.gov.
You may notify NISSAN by contacting our Consumer Affairs Department, toll-free, at 1-800-NISSAN-1.

For Canada
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying NISSAN.

If Transport Canada receives complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may request that NISSAN conduct a recall campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer, or NISSAN.

Additional information concerning motor vehicle safety may be obtained from Transport Canada’s Road Safety Information Center at 1-800-333-0371 or online at www.tc.gc.ca/roadsafety (English speakers) or www.tc.gc.ca/securiteroutiere (French speakers).

To notify NISSAN of any safety concerns please contact our Consumer Information Centre toll free at 1-800-387-0122.

TELEMATICS OVERVIEW (MODELS WITH NAVIGATION SYSTEM)
In addition to Event Data Recorders (EDRs) mentioned in this Owner’s Manual, this vehicle is equipped with electronic modules that monitor, control and record data concerning various vehicle systems, including the motor, batteries, braking and electrical systems. Other electronic modules record information concerning driving conditions, including idling, braking, acceleration, trip and other related data, information about your use of the car and its features such as air conditioner or headlight usage, diagnostic trouble codes, vehicle charging, vehicle speed, direction and/or location.

Some of this data is stored by the vehicle for use during vehicle servicing. Other data concerning your vehicle’s operation and performance is wirelessly transmitted by cellular connection through the vehicle onboard telematics system upon vehicle start-up or at other intervals to NISSAN. This data may be used by NISSAN for various purposes, including: to provide you with NissanConnectSM EV Services (For additional information, refer to “LEAF Navigation System Owner’s Manual”); troubleshooting; evaluation of your vehicle’s quality, functionality and performance; analysis and research by NISSAN designed to, among other things, optimize performance of future electric vehicles including improvements in
future battery life; to offer you new or additional products or services; and as otherwise may be required by law. Such data may be shared with NISSAN’s parents, subsidiaries, affiliates, successors or assignees; authorized NISSAN certified LEAF dealers; NISSAN’s marketing partners; your fleet company, if your vehicle is a fleet vehicle; your rental company, if your vehicle is a rental vehicle; and third party service providers such as cellular, information systems and data management providers.

State and provincial laws allow access and use of data recorded by vehicle devices with the consent of the vehicle owner or pursuant to subscription agreement. While you are not required to allow such access and use, if you do not so agree NISSAN may be unable under applicable law to activate the vehicle telematics system in your vehicle, and certain features of your vehicle which are dependent on vehicle telematics will not operate as intended or designed. These may include features such as automatic charging station map updates, remote battery state of charge check, charging complete notice, remote plug in reminder, remote charging on, remote climate control on, drive route planning, driving tips to improve range, driving history, billing simulation, ECO ranking, ECO forest, maintenance reminders, etc. Other features that may be developed and offered by NISSAN in the future may also not function without telematics data transmission.

NissanConnectSM EV Services telematics services are provided by NISSAN pursuant to a subscription services agreement covering your vehicle. This agreement is necessary for all owners. This agreement, and an explanation of its terms and conditions, can be found at the NISSAN Owner’s Portal webpage. Further, the operator of the vehicle must also touch [OK] on the Navi screen to indicate assent each time he or she starts the car. If you decide at any time that you do not want your vehicle to transmit data to NISSAN, you can deactivate the telematics account associated with this vehicle by canceling the subscription services agreement by visiting the NISSAN Owner’s Portal Webpage or calling NISSAN at 1-877-NOGASEV (1-877-664-2738). The service can be reactivated later upon request if you choose. Simply visit the same website or call the number above. Alternatively, you can turn off the transmission of certain categories of data through the use of settings found in the Navigation system under Menu, NissanConnectSM EV Services, Vehicle Information Sharing with NISSAN. Note, turning off “Vehicle Information Sharing with NISSAN” will only disable the automatic sharing of information at vehicle start-up. Certain categories of data may still be transmitted if vehicle telematics features are accessed either in the vehicle or remotely.

Your agreement to the transmission and use of data by NISSAN can be provided in various ways. The vehicle is equipped with a “pop up” screen on the vehicle navigation system that will ask for your consent to this data transfer. A version of the following message will appear: “Pursuant to subscription agreement, your vehicle wirelessly transmits recorded vehicle data to NISSAN for various purposes, including NissanConnectSM EV Services, product evaluation, research and development. By touching OK, you consent to the transmission and use of your vehicle data. See Owner’s Manual or NISSAN Owner’s portal webpage for terms and details.” If you touch [OK], your vehicle will transmit data as designed in connection with the vehicle telematics system. If you touch [Decline] your vehicle will not transmit data. However, the telematics features referenced above, and perhaps others, will not be available to you. The vehicle’s static navigation system will remain operational, and you will be able to access your radio and climate controls.
Telematics features are dependent on cellular data transmission. Some areas may have limited or no cellular connectivity, resulting in a loss or interruption of data transmission and, as a result, certain features may be temporarily unavailable. Even if areas with good signal reception, cellular connectivity can be adversely affected by things such as tall buildings, apartments, tunnels, underground parking, mountainous areas, etc. Even if the signal strength bar of the in-vehicle data communication module indicates good reception, connectivity may be disrupted. This does not indicate a malfunction. Operate the system again after a few minutes to restore connectivity. NissanConnectSM EV Services telematics features are offered as a convenience to the vehicle owner. NISSAN is not responsible for, and owner assumes all risk of, interruptions in service or errors based on incomplete or inaccurate data. NissanConnectSM EV Services communications may be received at a verified e-mail address or by SMS/text messaging-enabled mobile phone. Standard text rates and/or data usage may apply depending on your carrier.

If your vehicle’s telematics account is active, and you are not the original owner, please contact NISSAN at the website or phone number above as soon as possible to update the telematics enrollment information. Upon sale of the vehicle, please contact NISSAN at the website or phone number above so that NISSAN’s records may be updated. NissanConnectSM EV Services subscription services will automatically terminate at the end of the initial free term if you do not wish to renew your subscription agreement at the prices then in effect.

EVENT DATA RECORDERS (EDR)
This vehicle is equipped with an Event Data Recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.
- Sounds are not recorded.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur.
NOTE:
EDR data are recorded by your vehicle only if a nontrivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (for example, name, gender, age and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.
To read data recorded by an EDR, special equipment is required and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer and NISSAN certified LEAF dealer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR. EDR data will only be accessed with the consent of the vehicle owner or lessee or as otherwise required or permitted by law.

OWNER'S MANUAL/SERVICE MANUAL ORDER INFORMATION
Genuine NISSAN Service Manuals for this model year and prior can be purchased. A Genuine NISSAN Service Manual is the best source of service and repair information for your vehicle. This manual is the same one used by the factory trained technicians working at a NISSAN certified LEAF dealer. Genuine NISSAN Owner’s Manuals can also be purchased.

For USA:
For current pricing and availability of Genuine NISSAN Service Manuals, contact:
www.nissan-techinfo.com
For current pricing and availability of Genuine NISSAN Owner’s Manuals, contact:
1-800-247-5321

For Canada:
To purchase a copy of a Genuine NISSAN Service Manual or Owner’s Manual for this model year and prior, please contact a NISSAN certified LEAF dealer. For the phone number and location of a NISSAN certified LEAF dealer in your area, call the NISSAN Information Center at 1-800-387-0122 and a bilingual NISSAN representative will assist you.
### CHARGING INFORMATION

The following 3 methods can be used for recharging the Li-ion battery:

<table>
<thead>
<tr>
<th>Charge port</th>
<th>Charge connector</th>
<th>Power</th>
<th>Charging</th>
<th>Battery type</th>
<th>Estimated charging time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normal Charge</td>
<td><img src="image" alt="Normal Charge Diagram" /></td>
<td>Use the charging device (AC 220-240 volt) that is installed in your home</td>
<td></td>
<td>30 kWh Battery</td>
<td>Approximately 5.5 to 9.5 hours (depending on the charger) to charge the Li-ion battery from discharged (Low battery charge warning light illuminated) to 100% charged.</td>
</tr>
<tr>
<td>Trickle Charge</td>
<td><img src="image" alt="Trickle Charge Diagram" /></td>
<td>Use the EVSE (Electric Vehicle Supply Equipment) or trickle charge cable for &quot;sleep&quot; charging at a destination such as a friend's house. Use only a 110-120 volt, 15 amp, dedicated outlet for charging.</td>
<td></td>
<td>30 kWh Battery</td>
<td>Approximately 26 hours to charge the Li-ion battery from discharged (Low battery charge warning light illuminated) to 100% charged.</td>
</tr>
<tr>
<td>Quick Charge (if so equipped)</td>
<td><img src="image" alt="Quick Charge Diagram" /></td>
<td>Public charging stations</td>
<td></td>
<td>30 kWh Battery</td>
<td>Approximately 30 minutes to charge the Li-ion battery from discharged (Low battery charge warning light illuminated) to 80% charged.</td>
</tr>
</tbody>
</table>
Charging time information

Normal charge

- 30 kWh Battery
- Approximately 5.5 to 9.5 hours (depending on the charger)

Trickle charge

- 30 kWh Battery
- Approximately 25 hours

Quick charge (if so equipped)

- 30 kWh Battery
- Approximately 30 minutes

* Low battery charge warning light is ON.

9-20 Technical and consumer information
COLD TIRE PRESSURES
The label is typically located on the driver side center pillar or on the driver’s door. For additional information, refer to “Wheels and tires” in the “Maintenance and do-it-yourself” section of this manual.
