2018 SENTRA
OWNER’S MANUAL
and MAINTENANCE INFORMATION

For your safety, read carefully and keep in this vehicle.
Owner’s Manual Supplement

The information contained within this supplement updates the following information in the 2017 NISSAN Sentra, 2017 NISSAN Altima, 2018 NISSAN Sentra and 2018 NISSAN Altima Owner’s Manual.

• “NISSAN Advanced Air Bag System (front seats)” section of the Owner’s Manual.

Read carefully and keep in vehicle.

Printing: November 2017
Publication No.: SU18EA 0OC0U0
NISSAN Advanced Air Bag System (front seats)

**WARNING**

To ensure proper operation of the passenger’s NISSAN Advanced Air Bag System, please observe the following items.

- Do not allow a passenger in the rear seat to push or pull on the seatback pocket.
- Do not place heavy loads heavier than 9.1 lbs. (4 kg) on the seatback, head restraint/headrest or in the seatback pocket.
- Make sure that there is nothing pressing against the rear of the seatback, such as a child restraint installed in the rear seat or an object stored on the floor.
- Make sure that there is no object placed under the front passenger seat.
- Make sure that there is no object placed between the seat cushion and center console or between the seat cushion and the door.

- If a forward facing child restraint is installed in the front passenger seat, do not position the front passenger seat so the child restraint contacts the instrument panel. If the child restraint does contact the instrument panel, the system may determine the seat is occupied and the passenger air bag may deploy in a collision. Also the front passenger air bag status light may not illuminate. For additional information about installing and using child restraints, refer to “Child restraints” in this section.
- Confirm the operating condition with the front passenger air bag status light.
- If you notice that the front passenger air bag status light is not operating as described in this section, get the occupant classification system checked. It is recommended that you visit a NISSAN dealer for this service.
- Until you have confirmed with a dealer that your passenger seat occupant classification system is working properly, position the occupants in the rear seating positions.

- Do not position the front passenger seat so it contacts the rear seat. If the front seat does contact the rear seat, the air bag system may determine a sensor malfunction has occurred and the front passenger air bag status light may illuminate and the supplemental air bag warning light may flash.

This vehicle is equipped with the NISSAN Advanced Air Bag System for the driver and front passenger seats. This system is designed to meet certification requirements under U.S. regulations. It is also permitted in Canada. However, all of the information, cautions and warnings in this manual still apply and must be followed.

The driver supplemental front-impact air bag is located in the center of the steering wheel. The front passenger supplemental front-impact air bag is mounted in the dashboard above the glove box. The front air bags are designed to inflate in higher severity frontal collisions, although they may inflate if the forces in another type of collision are similar to those of a higher severity frontal impact. They may not inflate in certain frontal collisions. Vehicle
damage (or lack of it) is not always an indication of proper front air bag system operation.

The NISSAN Advanced Air Bag System monitors information from the crash zone sensor, the Air bag Control Unit (ACU), seat belt buckle sensors and occupant classification sensor (weight sensor). Inflator operation is based on the severity of a collision and seat belt usage for the driver. For the front passenger, the occupant classification sensor is also monitored. Based on information from the sensor, only one front air bag may inflate in a crash, depending on the crash severity and whether the front occupants are belted or unbelted. Additionally, the front passenger air bag may be automatically turned off under some conditions, depending on the weight detected on the front passenger seat and how the seat belt is used. If the front passenger air bag is OFF, the front passenger air bag status light will be illuminated. For additional information, refer to “Front passenger air bag and status light” in this section. One front air bag inflating does not indicate improper performance of the system.

If you have any questions about your air bag system, it is recommended that you visit a NISSAN dealer to obtain information about the system. If you are considering modification of your vehicle due to a disability, you may also contact NISSAN. Contact information is contained in the front of this Owner’s Manual.

When a front air bag inflates, a fairly loud noise may be heard, followed by the release of smoke. This smoke is not harmful and does not indicate a fire. Care should be taken to not inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

Front air bags, along with the use of seat belts, help to cushion the impact force on the face and chest of the front occupants. They can help save lives and reduce serious injuries. However, an inflating front air bag may cause facial abrasions or other injuries. Front air bags do not provide restraint to the lower body.

Even with NISSAN Advanced Air Bags, seat belts should be correctly worn and the driver and front passenger seated upright as far as practical away from the steering wheel or instrument panel. The front air bags inflate quickly in order to help protect the front occupants. Because of this, the force of the front air bag inflating can increase the risk of injury if the occupant is too close to, or is against, the front air bag module during inflation.

The front air bags deflate quickly after a collision.

The front air bags operate only when the ignition switch is placed in the ON position.

After placing the ignition switch in the ON position, the supplemental air bag warning light illuminates. The supplemental air bag warning light will turn off after about 7 seconds if the system is operational.
**WARNING**

The front passenger air bag is designed to automatically turn OFF under some conditions. Read this section carefully to learn how it operates. Proper use of the seat, seat belt and child restraints is necessary for most effective protection. Failure to follow all instructions in this manual concerning the use of seats, seat belts and child restraints can increase the risk or severity of injury in an accident.

### Front passenger air bag and status light

**Status light**

The front passenger seat is equipped with an occupant classification sensor (weight sensor) that turns the front passenger air bag on or off depending on the weight applied to the front passenger seat. The status of the front passenger air bag (ON or OFF) is indicated by the front passenger air bag status light  which is located on the instrument panel.

After the ignition switch is placed in the "ON" position, the front passenger air bag status light on the instrument panel illuminates for about 7 seconds and then turns off or remains illuminated depending on the front passenger seat occupied status. The light operates as follows:

<table>
<thead>
<tr>
<th>CONDITION</th>
<th>DESCRIPTION</th>
<th>PASSENGER AIR BAG STATUS ( )</th>
<th>FRONT PASSENGER AIR BAG STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Empty front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Nobody/Somebody</td>
<td>Bag or Child or Child Restraint or Small Adult in front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Adult</td>
<td>Adult in the front passenger seat</td>
<td>OFF (dark)</td>
<td>ACTIVATED</td>
</tr>
</tbody>
</table>

In addition to the above, certain objects placed on the front passenger seat may also cause the light to operate as described above depending on their weight.

For additional information related to the normal operation and troubleshooting of this occupant classification sensor system, please refer to ‘Normal operation’ and ‘Troubleshooting’ in this section.

### Front passenger air bag

The front passenger air bag is designed to automatically turn OFF when the vehicle is operated under some conditions as described below in accordance with U.S. regu-
lations: if the front passenger air bag is OFF, it will not inflate in a crash. The driver air bag and other air bags in your vehicle are not part of this system.

The purpose of the regulation is to help reduce the risk of injury or death from an inflating air bag to certain front passenger seat occupants, such as children, by requiring the air bag to be automatically turned OFF. Certain sensors are used to meet the requirements.

The occupant classification sensor in this vehicle is a weight sensor. It is designed to detect an occupant and objects on the seat by weight. For example, if a child is in the front passenger seat, the NISSAN Advanced Air Bag System is designed to turn the front passenger air bag OFF in accordance with the regulations. Also, if a child restraint of the type specified in the regulations is on the seat, its weight and the child's weight can be detected and cause the air bag to turn OFF.

Front passenger seat adult occupants who are properly seated and using the seat belt as outlined in this manual should not cause the front passenger air bag to be automatically turned OFF. For small adults it may be turned OFF; however if the occupant takes his/her weight off the seat cushion (for example, by not sitting upright, by sitting on an edge of the seat, or by otherwise being out of position), this could cause the sensor to turn the air bag OFF. Always be sure to be seated and wearing the seat belt properly for the most effective protection by the seat belt and supplemental air bag.

NISSAN recommends that pre-teens and children be properly restrained in a rear seat. NISSAN also recommends that appropriate child restraints and booster seats be properly installed in a rear seat. If this is not possible, the occupant classification sensor is designed to operate as described above to turn the front passenger air bag OFF for specified child restraints as required by the regulations. Failing to properly secure child restraints and to use the ALR mode may allow the restraint to tip or move in a collision or sudden stop. This can also result in the passenger air bag inflating in a crash instead of being OFF. For additional information about proper use and installation, refer to “Child restraints” in this section.

If the front passenger seat is not occupied, the front passenger air bag is designed not to inflate in a crash. However, heavy objects placed on the seat could result in air bag inflation, because of the object’s weight detected by the occupant classification sensor. Other conditions could also result in air bag inflation, such as if a child is standing on the seat, or if two children are on the seat, contrary to the instructions in this manual. Always be sure that you and all vehicle occupants are seated and restrained properly.

Using the front passenger air bag status light, you can monitor when the front passenger air bag is automatically turned OFF. If an adult occupant is in the seat but the front passenger air bag status light is illuminated (indicating that the air bag is OFF), it could be that the person is a small adult, or is not sitting on the seat properly or not using the seat belt properly.

If a child restraint must be used in the front seat, the front passenger air bag status light may or may not be illuminated, depending on the size of the child and the type of child restraint being used. If the air bag status light is not illuminated (indicating that the air bag might inflate in a crash), it could be that the child restraint or seat belt is not being used properly. Make sure that the child restraint is installed properly.
the seat belt is used properly and the occupant is positioned properly. If the air bag status light is still not illuminated, reposition the occupant or child restraint in a rear seat.

If the front passenger air bag status light will not illuminate even though you believe that the child restraint, the seat belts and the occupant are properly positioned, it is recommended that you take your vehicle to a NISSAN dealer. A NISSAN dealer can check system status by using a special tool. However, until you have confirmed with a dealer that your air bag is working properly, reposition the occupant or child restraint in a rear seat.

The NISSAN Advanced Air Bag System and front passenger air bag status light will take a few seconds to register a change in the front passenger seat status. This is normal system operation and does not indicate a malfunction.

If a malfunction occurs in the front passenger air bag system, the supplemental air bag warning light \( \text{_installed in the meter and gauges area of the instrument panel,} \) will be illuminated (blinking or steadily lit). Have the system checked. It is recommended that you visit a NISSAN dealer for this service.

**Normal operation**

In order for the occupant classification sensor system to classify the front passenger based on weight, please follow the precautions and steps outlined below.

**Precautions**

- Make sure that there are no objects weighing over 9.1 lbs. (4 kg) hanging on the seat or placed in the seatback pocket.
- Make sure that a child restraint or other object is not pressing against the rear of the seatback.
- Make sure that a rear passenger is not pushing or pulling on the back of the front passenger seat.
- Make sure that the front passenger seat or seatback is not forced back against an object on the seat or floor behind it.
- Make sure that there is no object placed under the front passenger seat.

**Steps**

1. Adjust the seat as outlined in the "Seats" section of this manual. Sit upright, leaning against the seatback, and centered on the seat cushion with your feet comfortably extended to the floor.
2. Make sure there are no objects on your lap.
3. Fasten the seat belt as outlined in the "Seat belts" section of this manual. Front passenger seat belt buckle status is monitored by the occupant classification system, and is used as an input to determine occupancy status. So, it is highly recommended that the front passenger fasten their seat belt.
4. Remain in this position for 30 seconds allowing the system to classify the front passenger before the vehicle is put into motion.
5. Ensure proper classification by checking the front passenger air bag status light.
NOTE:
This vehicle’s occupant classification sensor system generally keeps the classification locked during driving, so it is important that you confirm that the front passenger is properly classified prior to driving. However, the occupant classification sensor may recalculate the weight of the occupant under some conditions (both while driving and when stopped), so front passenger seat occupants should continue to remain seated as outlined above.

Troubleshooting
If you think the front passenger air bag status light is incorrect:
1. If the light is ON with an adult occupying the front passenger seat:
   - Occupant is a small adult — the air bag light is functioning as intended. The front passenger air bag is suppressed. However, if the occupant is not a small adult, then this may be due to the following conditions that may be interfering with the weight sensors:
     - Occupant is not sitting upright, leaning against the seatback, and centered on the seat cushion with his/her feet comfortably extended to the floor.
     - A child restraint or other object pressing against the rear of the seatback.
     - A rear passenger pushing or pulling on the back of the front passenger seat.
     - Forcing the front seat or seatback against an object on the seat or floor behind it.
     - An object placed under the front passenger seat.
     - An object placed between the seat cushion and center console or between the seat cushion and the door.

If the vehicle is moving, please come to a stop when it is safe to do so. Check and correct any of the above conditions. Restart the vehicle and wait 1 minute.

NOTE:
A system check will be performed during which the front passenger air bag status light will remain lit for about 7 seconds initially.
If the light is still ON after this, the person should be advised not to ride in the front passenger seat and the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

2. If the light is OFF with a small adult, child or child restraint occupying the front passenger seat.
   This may be due to the following conditions that may be interfering with the weight sensors:
   - Small adult or child is not sitting upright, leaning against the seatback, and centered on the seat cushion with his/her feet comfortably extended to the floor.
   - The child restraint is not properly installed, as outlined in the ‘Child restraints’ section of this manual.
   - An object weighing over 9.1 lbs. (4 kg) hanging on the seat or placed in the seatback pocket.
• A child restraint or other object pressing against the rear of the seatback.
• A rear passenger pushing or pulling on the back of the front passenger seat.
• Forcing the front seat or seatback against an object on the seat or floor behind it.
• An object placed under the front passenger seat.
• An object placed between the seat cushion and center console.

If the vehicle is moving, please come to a stop when it is safe to do so. Check and correct any of the above conditions. Restart the vehicle and wait 1 minute.

NOTE:
A system check will be performed during which the front passenger air bag status light will remain lit for about 7 seconds initially.

If the light is still OFF after this, the small adult, child or child restraint should be repositioned in the rear seat and the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

3. If the light is OFF with no front passenger and no objects on the front passenger seat, the vehicle should be checked. It is recommended that you visit a NISSAN dealer as soon as possible.

Other supplemental front-impact air bag precautions

WARNING
• Do not place any objects on the steering wheel pad or on the instrument panel. Also, do not place any objects between any occupant and the steering wheel or instrument panel. Such objects may become dangerous projectiles and cause injury if the front air bags inflate.
• Immediately after inflation, several front air bag system components will be hot. Do not touch them; you may severely burn yourself.
• No unauthorized changes should be made to any components or wiring of the supplemental air bag system. This is to prevent accidental inflation of the supplemental air bag or damage to the supplemental air bag system.

• Do not make unauthorized changes to your vehicle’s electrical system, suspension system or front end structure. This could affect proper operation of the front air bag system.
• Tampering with the front air bag system may result in serious personal injury. Tampering includes changes to the steering wheel and the instrument panel assembly by placing material over the steering wheel pad and above the instrument panel or by installing additional trim material around the air bag system.
• Removing or modifying the front passenger seat may affect the function of the air bag system and result in serious personal injury.
Modifying or tampering with the front passenger seat may result in serious personal injury. For example, do not change the front seats by placing material on the seat cushion or by installing additional trim material, such as seat covers, on the seat that are not specifically designed to assure proper airbag operation. Additionally, do not stow any objects under the front passenger seat or the seat cushion and seatback. Such objects may interfere with the proper operation of the occupant classification sensor (weight sensor).

No unauthorized changes should be made to any components or wiring of the seat belt system. This may affect the front air bag system. Tampering with the seat belt system may result in serious personal injury.

It is recommended that you visit a NISSAN dealer for work on and around the front air bag system. It is also recommended that you visit a NISSAN dealer for installation of electrical equipment. The Supplemental Restraint System (SRS) wiring harnesses* should not be modified or disconnected. Unauthorized electrical test equipment and probing devices should not be used on the air bag system.

A cracked windshield should be replaced immediately by a qualified repair facility. A cracked windshield could affect the function of the supplemental air bag system.

*The SRS wiring harness connectors are yellow and orange for easy identification.

When selling your vehicle, we request that you inform the buyer about the front air bag system and guide the buyer to the appropriate sections in this Owner's Manual.
This manual was prepared to help you understand the operation and maintenance of your vehicle so that you may enjoy many miles (kilometers) of driving pleasure. Please read through this manual before operating your vehicle.

A separate Warranty Information Booklet explains details about the warranties covering your vehicle. The "Maintenance and schedules" section of this manual explains details about maintaining and servicing your vehicle. Additionally, a separate Customer Care/Lemon Law Booklet (U.S. only) will explain how to resolve any concerns you may have with your vehicle, and clarify your rights under your state's lemon law.

When you require any service or have any questions, a NISSAN dealer will be glad to assist you with the extensive resources available to them.

In addition to factory-installed options, your vehicle may also be equipped with additional accessories installed prior to delivery. It is recommended that you visit a NISSAN dealer for details concerning the particular accessories with which your vehicle is equipped. It is important that you familiarize yourself with all disclosures, warnings, cautions and instructions concerning proper use of such accessories prior to operating the vehicle and/or accessory. It is recommended that you visit a NISSAN dealer for details concerning the particular accessories with which your vehicle is equipped.

Before driving your vehicle, please read this Owner's Manual carefully. This will ensure familiarity with controls and maintenance requirements assisting you in the safe operation of your vehicle.

**WARNING**

**IMPORTANT SAFETY INFORMATION REMINDERS!**

Follow these important driving rules to help ensure a safe and comfortable trip for you and your passengers!

- NEVER drive under the influence of alcohol or drugs.
- ALWAYS observe posted speed limits and never drive too fast for conditions.
- ALWAYS give your full attention to driving and avoid using vehicle features or taking other actions that could distract you.
- ALWAYS use your seat belts and appropriate child restraint systems. Pre-teen children should be seated in the rear seat.
• ALWAYS provide information about the proper use of vehicle safety features to all occupants of the vehicle.
• ALWAYS review this Owner’s Manual for important safety information.

MODIFICATION OF YOUR VEHICLE
This vehicle should not be modified. Modification could affect its performance, safety, emissions or durability and may even violate governmental regulations. In addition, damage or performance problems resulting from modifications may not be covered under NISSAN warranties.

⚠️ WARNING
Installing an aftermarket On-Board Diagnostic (OBD) plug-in device that uses the port during normal driving, for example remote insurance company monitoring, remote vehicle diagnostics, telematics or engine reprogramming, may cause interference or damage to vehicle systems. We do not recommend or endorse the use of any aftermarket OBD plug-in devices, unless specifically approved by NISSAN. The vehicle warranty may not cover damage caused by any aftermarket plug-in device.

This manual includes information for all features and equipment available on this model. Features and equipment in your vehicle may vary depending on model, trim level, options selected, order, date of production, region or availability. Therefore, you may find information about features or equipment that are not included or installed on your vehicle.

All information, specifications and illustrations in this manual are those in effect at the time of printing. NISSAN reserves the right to change specifications, performance, design or component suppliers without notice and without obligation. From time to time, NISSAN may update or revise this manual to provide Owners with the most accurate information currently available. Please carefully read and retain with this manual all revision updates sent to you by NISSAN to ensure you have access to accurate and up-to-date information regarding your vehicle. Current versions of vehicle Owner’s Manuals and any updates can also be found in the Owner section of the NISSAN website at https://owners.nissanusa.com/owners/navigation/manualsGuide. If you have questions concerning any information in your Owner’s Manual, contact NISSAN Con-
sumer Affairs. For contact information, refer to the NISSAN CUSTOMER CARE PROGRAM page in this Owner’s Manual.

IMPORTANT INFORMATION ABOUT THIS MANUAL

You will see various symbols in this manual. They are used in the following ways:

**WARNING**
This is used to indicate the presence of a hazard that could cause death or serious personal injury. To avoid or reduce the risk, the procedures must be followed precisely.

**CAUTION**
This is used to indicate the presence of a hazard that could cause minor or moderate personal injury or damage to your vehicle. To avoid or reduce the risk, the procedures must be followed carefully.

If you see this symbol, it means “Do not do this” or “Do not let this happen.”

If you see a symbol similar to these in an illustration, it means the arrow points to the front of the vehicle.

Arrows in an illustration that are similar to these indicate movement or action.

**WARNING**
Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.
Operating, servicing and maintaining a passenger vehicle or off-road vehicle can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your vehicle. For more information go to www.P65Warnings.ca.gov.

CALIFORNIA PERCHLORATE ADVISORY

Some vehicle parts, such as lithium batteries, may contain perchlorate material. The following advisory is provided: “Perchlorate Material – special handling may apply. For additional information, refer to www.dtsc.ca.gov/hazardouswaste/perchlorate/”.

BLUETOOTH® is a trademark owned by Bluetooth SIG, Inc. and licensed to Visteon and Bosch.

SiriusXM® services require a subscription after trial period and are sold separately or as a package. The satellite service is available only in the 48 contiguous USA and DC. SiriusXM® satellite service is also available in Canada; see www.siriusxm.ca.

**WARNING**

- Do not ride in a moving vehicle when the seatback is reclined. This can be dangerous. The shoulder belt will not be against your body. In an accident, you could be thrown into it and receive neck or other serious injuries. You could also slide under the lap belt and receive serious internal injuries.

- Do not leave children unattended inside the vehicle. They could unknowingly activate switches or controls or make the vehicle move. Unattended children could become involved in serious accidents.

- To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

- Do not adjust the driver’s seat while driving so full attention may be given to vehicle operation. The seat may move suddenly and could cause loss of control of the vehicle.

- The seatback should not be reclined any more than needed for comfort. Seat belts are most effective when the passenger sits well back and straight up in the seat. If the seatback is reclined, the risk of sliding under the lap belt and being injured is increased.

- For the most effective protection when the vehicle is in motion, the seat should be upright. Always sit well back and upright in the seat with both feet on the floor and adjust the seat properly. For additional information, refer to “Precautions on seat belt usage” in this section.

- After adjustment, gently rock in the seat to make sure it is securely locked.

**SAFETY—Seats, seat belts and supplemental restraint system**

Sit upright and well back.
When adjusting the seat positions, be sure not to contact any moving parts to avoid possible injuries and/or damage.

FRONT MANUAL SEAT ADJUSTMENT (for passenger’s seat and if so equipped for driver’s seat)

Your vehicle seats can be adjusted manually. For additional information about adjusting the seats, refer to the steps outlined in this section.

Forward and backward
Pull the center of the bar up and hold it while you slide the seat forward or backward to the desired position. Release the bar to lock the seat in position.

Reclining
To recline the seatback, pull the lever up and lean back. To bring the seatback forward, pull the lever up and lean your body forward. Release the lever to lock the seatback in position.

The reclining feature allows adjustment of the seatback for occupants of different sizes for added comfort and to help obtain proper seat belt fit. For additional information, refer to “Precautions on seat belt usage” in this section. Also, the seatback can be reclined to allow occupants to rest when the vehicle is stopped and the shift
lever (CVT) is in P (Park) or the manual shift lever is in N (Neutral) with the parking brake applied.

Seat lifter (driver’s seat)
Pull up or push down the adjusting lever to adjust the seat height until the desired position is achieved.
FRONT POWER SEAT ADJUSTMENT
(if so equipped for driver’s seat)

Operating tips

- The power seat motor has an auto-reset overload protection circuit. If the motor stops during operation, wait 30 seconds then reactivate the switch.
- Do not operate the power seat switch for a long period of time when the engine is off. This will discharge the battery.

Forward and backward

Moving the switch as shown will slide the seat forward or backward to the desired position.

Reclining

Move the recline switch as shown until the desired angle is obtained.

The reclining feature allows adjustment of the seatback for occupants of different sizes for added comfort and to help obtain proper seat belt fit. For additional information, refer to “Precautions on seat belt usage” in this section. Also, the seatback can be reclined to allow occupants to rest when the vehicle is stopped and the shift lever is in P (Park) or N (Neutral) position with the parking brake fully applied.
Seat lifter
Move the switch as shown to adjust the height of the seat cushion.

Lumbar support
The lumbar support feature provides adjustable lower back support to the driver. Push the switch as shown to adjust the seatback lumbar area.

FOLDING REAR SEAT
Pull the knob to fold each seatback down.

WARNING
- Never allow anyone to ride in the cargo area or on the rear seat when it is in the fold-down position. Use of these areas by passengers without proper restraints could result in serious injury or death in an accident or sudden stop.
• Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.
• When returning the seatbacks to the upright position, be certain they are completely secured in the latched position. If they are not completely secured, passengers may be injured in an accident or sudden stop.
• Closely supervise children when they are around cars to prevent them from playing and becoming locked in the trunk where they could be seriously injured. Keep the car locked, with the rear seatback and trunk lid securely latched when not in use, and prevent children's access to car keys.

CENTER ARMREST (if so equipped)
Pull the armrest down as shown.
The illustration shows the seating positions equipped with head restraints/headrests.

▲ Indicates the seating position is equipped with a head restraint.
■ Indicates the seating position is equipped with a headrest.
+ Indicates the seating position is not equipped with a head restraint or headrest (if applicable).

• Your vehicle is equipped with a head restraint/headrest that may be integrated, adjustable or non-adjustable.

• Adjustable head restraints/headrests have multiple notches along the stalk(s) to lock them in a desired adjustment position.
• The non-adjustable head restraints/headrests have a single locking notch to secure them to the seat frame.

Proper Adjustment:
– For the adjustable type, align the head restraint/headrest so the center of your ear is approximately level with the center of the head restraint/headrest.
– If your ear position is still higher than the recommended alignment, place the head restraint/headrest at the highest position.
– If the head restraint/headrest has been removed, ensure that it is reinstalled and locked in place before riding in that designated seating position.

1-8 Safety—Seats, seat belts and supplemental restraint system

ADJUSTABLE HEAD RESTRAINT/HEADREST COMPONENTS
1. Removable head restraint/headrest
2. Multiple notches
3. Lock knob
4. Stalks
NON-ADJUSTABLE HEAD RERAINT/HEADREST COMPONENTS
1. Removable head restraint/headrest
2. Single notch
3. Lock knob
4. Stalks

REMOVE
Use the following procedure to remove the head restraint/headrest:
1. Pull the head restraint/headrest up to the highest position.
2. Push and hold the lock knob.
3. Remove the head restraint/headrest from the seat.
4. Store the head restraint/headrest properly in a secure place so it is not loose in the vehicle.

5. Reinstall and properly adjust the head restraint/headrest before an occupant uses the seating position.
INSTALL

1. Align the head restraint/headrest stalks with the holes in the seat. Make sure that the head restraint/headrest is facing the correct direction. The stalk with the notch (notches) ① must be installed in the hole with the lock knob ②.

2. Push and hold the lock knob and push the head restraint/headrest down.

3. Properly adjust the head restraint/headrest before an occupant uses the seating position.

ADJUST

For adjustable head restraint/headrest
Adjust the head restraint/headrest so the center is level with the center of your ears. If your ear position is still higher than the recommended alignment, place the head restraint/headrest at the highest position.

For non-adjustable head restraint/headrest
Make sure the head restraint/headrest is positioned so the lock knob is engaged in the notch before riding in that designated seating position.

1-10 Safety—Seats, seat belts and supplemental restraint system
Raise
To raise the head restraint/headrest, pull it up.
Make sure the head restraint/headrest is positioned so the lock knob is engaged in the notch before riding in that designated seating position.

Lower
To lower, push and hold the lock knob and push the head restraint/headrest down.
Make sure the head restraint/headrest is positioned so the lock knob is engaged in the notch before riding in that designated seating position.

Safety—Seats, seat belts and supplemental restraint system
PRECAUTIONS ON SEAT BELT USAGE

If you are wearing your seat belt properly adjusted and you are sitting upright and well back in your seat with both feet on the floor, your chances of being injured or killed in a collision and/or the severity of injury may be greatly reduced. NISSAN strongly encourages you and all of your passengers to buckle up every time you drive, even if your seating position includes a supplemental air bag.

Most U.S. states and Canadian provinces or territories specify that seat belts be worn at all times when a vehicle is being driven.
WARNING

- Every person who drives or rides in this vehicle should use a seat belt at all times. Children should be in the rear seats and in an appropriate restraint.

WARNING

- The seat belt should be properly adjusted to a snug fit. Failure to do so may reduce the effectiveness of the entire restraint system and increase the chance or severity of injury in an accident. Serious injury or death can occur if the seat belt is not worn properly.

Safety—Seats, seat belts and supplemental restraint system 1-13
WARNING

- Always route the shoulder belt over your shoulder and across your chest. Never put the belt behind your back, under your arm or across your neck. The belt should be away from your face and neck, but not falling off your shoulder.

- Position the lap belt as low and snug as possible AROUND THE HIPS, NOT THE WAIST. A lap belt worn too high could increase the risk of internal injuries in an accident.

- Be sure the seat belt tongue is securely fastened to the proper buckle.

- Do not wear the seat belt inside out or twisted. Doing so may reduce its effectiveness.

- Do not allow more than one person to use the same seat belt.

- Never carry more people in the vehicle than there are seat belts.

- If the seat belt warning light glows continuously while the ignition is turned ON with all doors closed and all seat belts fastened, it may indicate a malfunction in the system. Have the system checked. It is recommended that you visit a NISSAN dealer for this service.

- No changes should be made to the seat belt system. For example, do not modify the seat belt, add material, or install devices that may change the seat belt routing or tension. Doing so may affect the operation of the seat belt system. Modifying or tampering with the seat belt system may result in serious personal injury.

- Once seat belt pretensioner(s) have activated, they cannot be reused and must be replaced together with the retractor. It is recommended that you visit a NISSAN dealer for this service.

- All seat belt assemblies, including retractors and attaching hardware, should be inspected after any collision. It is recommended that you visit a NISSAN dealer for this service. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Seat belt assemblies not in use during a collision should also be inspected and replaced if either damage or improper operation is noted.

- All child restraints and attaching hardware should be inspected after any collision. Always follow the restraint manufacturer's inspection instructions and replacement recommendations. The child restraints should be replaced if they are damaged.
SEAT BELT WARNING LIGHT
Both the driver’s and passenger’s front seats are equipped with a seat belt warning light. The warning light, located on the instrument panel, will show the status of the driver and passenger seat belt.

NOTE:
The front passenger seat belt warning light will not light up if the seat is not occupied.

For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.

PREGNANT WOMEN
NISSAN recommends that pregnant women use seat belts. The seat belt should be worn snug and always position the lap belt as low as possible around the hips, not the waist. Place the shoulder belt over your shoulder and across your chest. Never run the lap/shoulder belt over your abdominal area. Contact your doctor for specific recommendations.

INJURED PERSONS
NISSAN recommends that injured persons use seat belts. Check with your doctor for specific recommendations.

THREE-POINT TYPE SEAT BELT WITH RETRACTOR

**WARNING**
- Every person who drives or rides in this vehicle should use a seat belt at all times.
- Do not ride in a moving vehicle when the seatback is reclined. This can be dangerous. The shoulder belt will not be against your body. In an accident, you could be thrown into it and receive neck or other serious injuries. You could also slide under the lap belt and receive serious internal injuries.
- For the most effective protection when the vehicle is in motion, the seat should be upright. Always sit well back and upright in the seat with both feet on the floor and adjust the seat belt properly.
• Do not allow children to play with the seat belts. Most seating positions are equipped with Automatic Locking Retractor (ALR) mode seat belts. If the seat belt becomes wrapped around a child's neck with the ALR mode activated, the child can be seriously injured or killed if the seat belt retracts and becomes tight. This can occur even if the vehicle is parked. Unbuckle the seat belt to release the child. If the seat belt cannot be unbuckled or is already unbuckled, release the child by cutting the seat belt with a suitable tool (such as a knife or scissors) to release the seat belt.

Manual front seat shown (if so equipped)

Fastening the seat belts

1. Adjust the seat. For additional information, refer to "Seats" in this section.
2. Slowly pull the seat belt out of the retractor and insert the tongue into the buckle until you hear and feel the latch engage.

- The retractor is designed to lock during a sudden stop or on impact. A slow pulling motion permits the seat belt to move and allows you some freedom of movement in the seat.
- If the seat belt cannot be pulled from its fully retracted position, firmly pull the belt and release it. Then smoothly pull the belt out of the retractor.

Safety—Seats, seat belts and supplemental restraint system
3. Position the lap belt portion **low and snug on the hips** (B) as shown.

4. Pull the shoulder belt portion toward the retractor to take up extra slack (C). Be sure the shoulder belt is routed over your shoulder and across your chest.

The front passenger seat and the rear seating positions’ three-point seat belts have two modes of operation:
- Emergency Locking Retractor (ELR)
- Automatic Locking Retractor (ALR)

The ELR mode allows the seat belt to extend and retract to allow the driver and passengers some freedom of movement in the seat. The ELR locks the seat belt when the vehicle slows down rapidly or during certain impacts.

The ALR mode (child restraint mode) locks the seat belt for child restraint installation.

When the ALR mode is activated, the seat belt cannot be extended again until the seat belt tongue is detached from the buckle and fully retracted. The seat belt returns to the ELR mode after the seat belt fully retracts. For additional information, refer to “Child restraints” in this section.

The ALR mode should be used only for child restraint installation. During normal seat belt use by an occupant, the ALR mode should not be activated. If it is activated, it may cause uncomfortable seat belt tension. It can also change the operation of the front passenger air bag. For additional information, refer to “Front passenger air bag and status light” in this section.

**WARNING**

When fastening the seat belts, be certain that the seatbacks are completely secured in the latched position. If they are not completely secured, passengers may be injured in an accident or sudden stop.
Unfastening the seat belts

To unfasten the seat belt, press the button on the buckle ①. The seat belt automatically retracts.

Checking seat belt operation

Seat belt retractors are designed to lock seat belt movement by two separate methods:

- When the seat belt is pulled quickly from the retractor
- When the vehicle slows down rapidly

To increase your confidence in the seat belts, check the operation as follows:

- Grasp the shoulder belt and pull forward quickly. The retractor should lock and restrict further belt movement.

If the retractor does not lock during this check, get the system checked. It is recommended that you visit a NISSAN dealer for this service, or to learn more about seat belt operation.

Shoulder belt height adjustment (front seats)

The shoulder belt anchor height should be adjusted to the position best for you. For additional information, refer to ‘Precautions on seat belt usage’ in this section. To adjust, pull out the adjustment button ① and move the shoulder belt anchor to the desired position ②, so the belt passes over the center of the shoulder. The belt should be away from your face and neck, but not falling off your shoulder. Release the adjustment button to lock the shoulder belt anchor into position.

Safety—Seats, seat belts and supplemental restraint system 1-19
WARNING
• After adjustment, release the adjustment button and try to move the shoulder belt anchor up and down to make sure it is securely fixed in position.
• The shoulder belt anchor height should be adjusted to the position best for you. Failure to do so may reduce the effectiveness of the entire restraint system and increase the chance or severity of injury in an accident.

SEAT BELT EXTENDERS
If, because of body size or driving position, it is not possible to properly fit the lap/shoulder belt and fasten it, an extender that is compatible with the installed seat belts is available for purchase. The extender adds approximately 8 in (200 mm) of length and may be used for either the driver or front passenger seating position. It is recommended that you visit a NISSAN dealer for assistance with purchasing an extender if an extender is required.

WARNING
• Only NISSAN seat belt extenders, made by the same company which made the original equipment seat belts, should be used with NISSAN seat belts.
• Adults and children who can use the standard seat belt should not use an extender. Such unnecessary use could result in serious personal injury in the event of an accident.
• Never use seat belt extenders to install child restraints. If the child restraint is not secured properly, the child could be seriously injured or killed in a collision or a sudden stop.

SEAT BELT MAINTENANCE
• To clean the seat belt webbing, apply a mild soap solution or any solution recommended for cleaning upholstery or carpet. Then wipe with a cloth and allow the seat belts to dry in the shade. Do not allow the seat belts to retract until they are completely dry.

• If dirt builds up in the shoulder belt guide of the seat belt anchors, the seat belts may retract slowly. Wipe the shoulder belt guide with a clean, dry cloth.
• Periodically check to see that the seat belt and the metal components, such as buckles, tongues, retractors, flexible wires and anchors, work properly. If loose parts, deterioration, cuts or other damage on the webbing is found, the entire seat belt assembly should be replaced.
## CHILD SAFETY

**WARNING**
Do not allow children to play with the seat belts. Most seating positions are equipped with Automatic Locking Retractor (ALR) mode seat belts. If the seat belt becomes wrapped around a child’s neck with the ALR mode activated, the child can be seriously injured or killed if the seat belt retracts and becomes tight. This can occur even if the vehicle is parked. Unbuckle the seat belt to release the child. If the seat belt cannot be unbuckled or is already unbuckled, release the child by cutting the seat belt with a suitable tool (such as a knife or scissors) to release the seat belt.

Children need adults to help protect them. They need to be properly restrained.

In addition to the general information in this manual, child safety information is available from many other sources, including doctors, teachers, government traffic safety offices, and community organizations. Every child is different, so be sure to learn the best way to transport your child.

There are three basic types of child restraint systems:
- Rear-facing child restraints
- Forward-facing child restraints
- Booster seats

The proper restraint depends on the child’s size. Generally, infants up to about 1 year and less than 20 lbs. (9 kg) should be placed in rear-facing child restraints. Forward-facing child restraints are available for children who outgrow rear-facing child restraints and are at least 1 year old. Booster seats are used to help position a vehicle lap/shoulder belt on a child who can no longer use a forward-facing child restraint.

Children and infants need special protection. The vehicle’s seat belts may not fit them properly. The shoulder belt may come too close to the face or neck. The lap belt may not fit over their small hip bones. In an accident, an improperly fitting seat belt could cause serious or fatal injury. Always use appropriate child restraints.

All U.S. states and Canadian provinces or territories require the use of approved child restraints for infants and small children. For additional information, refer to “Child restraints” in this section.

A child restraint may be secured in the vehicle by using either the LATCH (Lower Anchors and Tethers for Children) system or with the vehicle seat belt. For additional information, refer to “Child restraints” in this section.

NISSAN recommends that all pre-teens and children be restrained in the rear seat. Studies show that children are safer when properly restrained in the rear seat than in the front seat.

This is especially important because your vehicle has a supplemental restraint system (air bag system) for the front passenger. For additional information, refer to “Supplemental Restraint System (SRS)” in this section.

| Safety—Seats, seat belts and supplemental restraint system | 1-21 |
INFANTS

Infants up to at least 1 year old should be placed in a rear-facing child restraint. NISSAN recommends that infants be placed in child restraints that comply with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards. You should choose a child restraint that fits your vehicle and always follow the manufacturer’s instructions for installation and use.

SMALL CHILDREN

Children that are over 1 year old and weigh at least 20 lbs. (9 kg) should remain in a rear-facing child restraint as long as possible up to the height or weight limit of the child restraint. Children who outgrow the height or weight limit of the rear-facing child restraint and are at least 1 year old should be secured in a forward-facing child restraint with a harness. Refer to the manufacturer’s instructions for minimum and maximum weight and height recommendations. NISSAN recommends that small children be placed in child restraints that comply with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards. You should choose a child restraint that fits your vehicle and always follow the manufacturer’s instructions for installation and use.

LARGER CHILDREN

Children should remain in a forward-facing child restraint with a harness until they reach the maximum height or weight limit allowed by the child restraint manufacturer.

Once a child outgrows the height or weight limit of the harness-equipped forward-facing child restraint, NISSAN recommends that the child be placed in a commercially available booster seat to obtain proper seat belt fit. For a seat belt to fit properly, the booster seat should raise the child so that the shoulder belt is properly positioned across the chest and the top, middle portion of the shoulder. The shoulder belt should not cross the neck or face and should not fall off the shoulder. The lap belt should lie snugly across the lower hips or upper thighs, not the abdomen. A booster seat can only be used in seating positions that have a three-point type seat belt. The booster seat should fit the vehicle seat and have a label certifying that it complies with Federal Motor Vehicle Safety Standards or Canadian Motor Vehicle Safety Standards.

A booster seat should be used until the child can pass the seat belt fit test below:

- Are the child’s back and hips against the vehicle seatback?
- Is the child able to sit without slouching?
- Do the child’s knees bend easily over the front edge of the seat with feet flat on the floor?
- Can the child safely wear the seat belt (lap belt low and snug across the hips and shoulder belt across mid-chest and shoulder)?
- Is the child able to use the properly adjusted head restraint/headrest?
- Will the child be able to stay in position for the entire ride?
If you answered no to any of these questions, the child should remain in a booster seat using a three-point type seat belt.

**NOTE:**
Laws in some communities may follow different guidelines. Check local and state regulations to confirm your child is using the correct restraint system before traveling.

**WARNING**
Never let a child stand or kneel on any seat and do not allow a child in the cargo area. The child could be seriously injured or killed in a sudden stop or collision.

---

**PRECAUTIONS ON CHILD RESTRAINTS**

**WARNING**
- Failure to follow the warnings and instructions for proper use and installation of child restraints could result in serious injury or death of a child or other passengers in a sudden stop or collision:
  - The child restraint must be used and installed properly. Always follow all of the child restraint manufacturer’s instructions for installation and use.
- Infants and children should never be held on anyone's lap. Even the strongest adult cannot resist the forces of a collision.
- Do not put a seat belt around both a child and another passenger.
- NISSAN recommends that all child restraints be installed in the rear seat. Studies show that children are safer when properly restrained in the rear seat than in the front seat. If you must install a forward-facing child restraint in the front seat, refer to “Forward-facing child restraint installation using the seat belts” in this section.
- Even with the NISSAN Advanced Air Bag System, never install a rear-facing child restraint in the front seat. An inflating air bag could seriously injure or kill a child. A rear-facing child restraint must only be used in the rear seat.
- Be sure to purchase a child restraint that will fit the child and vehicle. Some child restraints may not fit properly in your vehicle.
- Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.
- Never use the anchor points for adult seat belts, or other items.
- A child restraint with a top tether strap should not be used in the front passenger seat.
- Keep seatbacks as upright as possible after fitting the child restraint.
- Infants and children should always be placed in an appropriate child restraint while in the vehicle.
• When the child restraint is not in use, keep it secured with the LATCH system or a seat belt. In a sudden stop or collision, loose objects can injure occupants or damage the vehicle.

CAUTION
A child restraint in a closed vehicle can become very hot. Check the seating surface and buckles before placing a child in the child restraint.

This vehicle is equipped with a universal child restraint anchor system, referred to as the LATCH (Lower Anchors and Tethers for Children) system. Some child restraints include rigid or webbing-mounted attachments that can be connected to these anchors. For additional information, refer to “LATCH (Lower Anchors and Tethers for Children) system” in this section.

If you do not have a LATCH compatible child restraint, the vehicle seat belts can be used.

Several manufacturers offer child restraints for infants and children of various sizes. When selecting any child restraint, keep the following points in mind:

• Choose only a restraint with a label certifying that it complies with Federal Motor Vehicle Safety Standard 213 or Canadian Motor Vehicle Safety Standard 213.

• Check the child restraint in your vehicle to be sure it is compatible with the vehicle’s seat and seat belt system.

• If the child restraint is compatible with your vehicle, place your child in the child restraint and check the various adjustments to be sure the child restraint is compatible with your child. Choose a child restraint that is designed for your child’s height and weight. Always follow all recommended procedures.

• If the combined weight of the child and child restraint is less than 65 lbs. (29.5 kg), you may use either the LATCH anchors or the seat belt to install the child restraint (not both at the same time).

• If the combined weight of the child and child restraint is greater than 65 lbs. (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint.

• Be sure to follow the child restraint manufacturer’s instructions for installation.

All U.S. states and Canadian provinces or territories require that infants and small children be restrained in an approved child restraint at all times while the vehicle is being operated. Canadian law requires the top tether strap on forward-facing child restraints be secured to the designated anchor point on the vehicle.
Your vehicle is equipped with special anchor points that are used with LATCH system compatible child restraints. This system may also be referred to as the ISOFIX or ISOFIX compatible system. With this system, you do not have to use a vehicle seat belt to secure the child restraint unless the combined weight of the child and child restraint exceeds 65 lbs. (29.5 kg). If the combined weight of the child and child restraint is greater than 65 lbs. (29.5 kg) use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

The LATCH anchor points are provided to install child restraints in the rear outboard seating positions only. Do not attempt to install a child restraint in the center position using the LATCH anchors.

**LATCH lower anchor**

**WARNING**

Failure to follow the warnings and instructions for proper use and installation of child restraints could result in serious injury or death of a child or other passengers in a sudden stop or collision:

- Attach LATCH system compatible child restraints only at the locations shown in the illustration.
- Do not secure a child restraint in the center rear seating position using the LATCH lower anchors. The child restraint will not be secured properly.

- Inspect the lower anchors by inserting your fingers into the lower anchor area. Feel to make sure there are no obstructions over the anchors such as seat belt webbing or seat cushion material. The child restraint will not be secured properly if the lower anchors are obstructed.

Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.
LATCH lower anchor location

The LATCH lower anchors are located as shown. A label is attached to the seatback to help you locate the LATCH lower anchors.

Installing child restraint LATCH lower anchor attachments

LATCH compatible child restraints include two rigid or webbing-mounted attachments that can be connected to two anchors located at certain seating positions in your vehicle. With this system, you do not have to use a vehicle seat belt to secure the child restraint. Check your child restraint for a label stating that it is compatible with LATCH. This information may also be in the instructions provided by the child restraint manufacturer.

LATCH webbing-mounted attachment

LATCH rigid-mounted attachment

When installing a child restraint, carefully read and follow the instructions in this manual and those supplied with the child restraint.
Top tether anchor point locations

**WARNING**

Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.

The child restraint top tether strap must be used when installing the child restraint with the LATCH lower anchor attachments or seat belts. For additional information, refer to “Installing top tether strap” in this section.

If you have any questions when installing a top tether strap child restraint, it is recommended that you visit a NISSAN dealer for this service.

Anchor points ① are located on the rear parcel shelf.

REAR-FACING CHILD RESTRAINT INSTALLATION USING LATCH

For additional information, refer to all Warnings and Cautions in the “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs. (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs. (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a rear-facing child restraint using the LATCH system:

1. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.
2. Secure the child restraint anchor attachments to the LATCH lower anchors. Check to make sure the LATCH attachment is properly attached to the lower anchors.

3. For child restraints that are equipped with webbing-mounted attachments, remove any additional slack from the anchor attachments. Press downward and rearward firmly in the center of the child restraint with your hand to compress the vehicle seat cushion and seatback while tightening the webbing of the anchor attachments.
After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the LATCH attachment path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the LATCH attachment holds the restraint in place. If the restraint is not secure, tighten the LATCH attachment as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint or try installing by using the vehicle seat belt (if applicable). Not all child restraints fit in all types of vehicles.

5. Check to make sure the child restraint is properly secured prior to each use. If the child restraint is loose, repeat steps 1 through 4.

REAR-FACING CHILD RESTRAINT INSTALLATION USING THE SEAT BELTS

**WARNING**

The three-point seat belt with Automatic Locking Retractor (ALR) must be used when installing a child restraint. Failure to use the ALR mode will result in the child restraint not being properly secured. The restraint could tip over or be loose and cause injury to a child in a sudden stop or collision.

For additional information, refer to all Warnings and Cautions in the “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs. (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs. (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a rear-facing child restraint using the vehicle seat belts in the rear seats:
1. Child restraints for infants must be used in the rear-facing direction and therefore must not be used in the front seat. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

2. Route the seat belt tongue through the child restraint and insert it into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer’s instructions for belt routing.

3. Pull the shoulder belt until the belt is fully extended. At this time, the seat belt retractor is in the ALR mode (child restraint mode). It reverts to the ELR mode when the seat belt is fully retracted.
4. Allow the seat belt to retract. Pull up on the shoulder belt to remove any slack in the belt.

5. Remove any additional slack from the seat belt; press downward and rearward firmly in the center of the child restraint to compress the vehicle seat cushion and seatback while pulling up on the seat belt.

6. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the seat belt path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the belt holds the restraint in place. If the restraint is not secure, tighten the seat belt as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.
7. Check to make sure that the child restraint is properly secured prior to each use. If the seat belt is not locked, repeat steps 1 through 6.

After the child restraint is removed and the seat belt fully retracted, the ALR mode (child restraint mode) is canceled.

FORWARD-FACING CHILD RESTRAINT INSTALLATION USING LATCH

For additional information, refer to all Warnings and Cautions in the ‘Child safety’ and ‘Child restraints’ sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs. (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs. (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.

Follow these steps to install a forward-facing child restraint using the LATCH system:

1. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

2. Secure the child restraint anchor attachments to the LATCH lower anchors. Check to make sure the LATCH attachment is properly attached to the lower anchors.

   If the child restraint is equipped with a top tether strap, route the top tether strap and secure the tether strap to the tether anchor point. For additional information, refer to ‘Installing top tether strap’ in this section.

---

Safety—Seats, seat belts and supplemental restraint system 1-33
Do not install child restraints that require the use of a top tether strap in seating positions that do not have a top tether anchor.

3. The back of the child restraint should be secured against the vehicle seatback. If necessary, adjust or remove the head restraint/headrest to obtain the correct child restraint fit. If the head restraint/headrest is removed, store it in a secure place. **Be sure to reinstall the head restraint/headrest when the child restraint is removed.** For additional information, refer to ‘Head restraints/headrests’ in this section.

If the seating position does not have an adjustable head restraint/headrest and it is interfering with the proper child restraint fit, try another seating position or a different child restraint.

4. For child restraints that are equipped with webbing-mounted attachments, remove any additional slack from the anchor attachments. Press downward and rearward firmly in the center of the child restraint with your knee to compress the vehicle seat cushion and seatback while tightening the webbing of the anchor attachments.

5. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.
6. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the LATCH attachment path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the LATCH attachment holds the restraint in place. If the restraint is not secure, tighten the LATCH attachment as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.

7. Check to make sure the child restraint is properly secured prior to each use. If the child restraint is loose, repeat steps 1 through 6.

Forward-facing – step 6

Rear seats

1. Top tether strap
2. Anchor point

Installing top tether strap

The child restraint top tether strap must be used when installing the child restraint with the LATCH lower anchor attachments.

First, secure the child restraint with the LATCH lower anchors (rear outboard positions only).
Rear bench seat
OUTBOARD SEATING POSITIONS
1. Position the top tether strap ① over the seatback.
2. Secure the tether strap to the tether anchor point ② as shown.
3. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN dealer for this service.

WARNING
Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.

FORWARD-FACING CHILD RESTR AINT INSTALLATION USING THE SEAT BELTS

WARNING
The three-point seat belt with Automatic Locking Retractor (ALR) must be used when installing a child restraint. Failure to use the ALR mode will result in the child restraint not being properly secured. The restraint could tip over or be loose and cause injury to a child in a sudden stop or collision. Also, it can change the operation of the front passenger air bag. For additional information, refer to “Front passenger air bag and status light” in this section.

Forward-facing (front passenger seat) – step 1

For additional information, refer to all Warnings and Cautions in the “Child safety” and “Child restraints” sections of this manual before installing a child restraint.

Do not use the lower anchors if the combined weight of the child and the child restraint exceeds 65 lbs. (29.5 kg). If the combined weight of the child and the child restraint is greater than 65 lbs. (29.5 kg), use the vehicle’s seat belt (not the lower anchors) to install the child restraint. Be sure to follow the child restraint manufacturer’s instructions for installation.
Follow these steps to install a forward-facing child restraint using the vehicle seat belt in the rear seats or in the front passenger seat:

1. If you must install a child restraint in the front seat, it should be placed in a forward-facing direction only. Move the seat to the rearmost position. Child restraints for infants must be used in the rear-facing direction and, therefore, must not be used in the front seat.

2. Position the child restraint on the seat. Always follow the child restraint manufacturer’s instructions.

The back of the child restraint should be secured against the vehicle seat-back.

If necessary, adjust or remove the head restraint/headrest to obtain the correct child restraint fit. If the head restraint/headrest is removed, store it in a secure place. Be sure to reinstall the head restraint/headrest when the child restraint is removed. For additional information, refer to ‘Head restraints/headrests’ in this section.

3. Route the seat belt tongue through the child restraint and insert it into the buckle until you hear and feel the latch engage. Be sure to follow the child restraint manufacturer’s instructions for belt routing.

If the child restraint is equipped with a top tether strap, route the top tether strap and secure the tether strap to the tether anchor point. For additional information, refer to ‘Installing top tether strap’ in this section.
Do not install child restraints that require the use of a top tether strap in seating positions that do not have a top tether anchor.

4. Pull the shoulder belt until the belt is fully extended. At this time, the seat belt retractor is in the ALR mode (child restraint mode). It reverts to ELR mode when the seat belt is fully retracted.

5. Allow the seat belt to retract. Pull up on the shoulder belt to remove any slack in the belt.
6. Remove any additional slack from the seat belt; press downward and rearward firmly in the center of the child restraint with your knee to compress the vehicle seat cushion and seatback while pulling up on the seat belt.

7. Tighten the tether strap according to the manufacturer's instructions to remove any slack.

8. After attaching the child restraint, test it before you place the child in it. Push it from side to side while holding the child restraint near the seat belt path. The child restraint should not move more than 1 inch (25 mm), from side to side. Try to tug it forward and check to see if the belt holds the restraint in place. If the restraint is not secure, tighten the seat belt as necessary, or put the restraint in another seat and test it again. You may need to try a different child restraint. Not all child restraints fit in all types of vehicles.

9. Check to make sure the child restraint is properly secured prior to each use. If the seat belt is not locked, repeat steps 2 through 8.
10. If the child restraint is installed in the front passenger seat, place the ignition switch in the ON position. The front passenger air bag status light should illuminate. If this light is not illuminated, refer to “Front passenger air bag and status light” in this section. Move the child restraint to another seating position. Have the system checked. It is recommended that you visit a NISSAN dealer for this service.

After the child restraint is removed and the seat belt is fully retracted, the ALR mode (child restraint mode) is canceled.

---

**Rear bench seat**

**OUTBOARD SEATING POSITIONS**

1. Position the top tether strap ① over the seatback.
2. Secure the tether strap to the tether anchor point ② as shown.
3. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

**CENTER SEATING POSITION**

1. Position the top tether strap ① over the seatback.
2. Secure the tether strap to the tether anchor point ② as shown.
3. Tighten the tether strap according to the manufacturer’s instructions to remove any slack.

If you have any questions when installing a top tether strap, it is recommended that you visit a NISSAN dealer for this service.
**WARNING**

Child restraint anchorages are designed to withstand only those loads imposed by correctly fitted child restraints. Under no circumstances are they to be used to attach adult seat belts, or other items or equipment to the vehicle. Doing so could damage the child restraint anchorages. The child restraint will not be properly installed using the damaged anchorage, and a child could be seriously injured or killed in a collision.

**BOOSTER SEATS**

For additional information on installing a booster seat in your vehicle, follow the instructions outlined in this section.

**Precautions on booster seats**

**WARNING**

If a booster seat and seat belt are not used properly, the risk of a child being injured or killed in a sudden stop or collision greatly increases:

- Make sure the shoulder portion of the belt is away from the child's face and neck and the lap portion of the belt does not cross the stomach.
- Make sure the shoulder belt is not behind the child or under the child's arm.
- A booster seat must only be installed in a seating position that has a lap/shoulder belt.

A. Low back booster seat
B. High back booster seat
Booster seats of various sizes are offered by several manufacturers. When selecting any booster seat, keep the following points in mind:

- Choose only a booster seat with a label certifying that it complies with Federal Motor Vehicle Safety Standard 213 or Canadian Motor Vehicle Safety Standard 213.
- Check the booster seat in your vehicle to be sure it is compatible with the vehicle’s seat and seat belt system.

- Make sure the child’s head will be properly supported by the booster seat or vehicle seat. The seatback must be at or above the center of the child’s ears. For example, if a low back booster seat is chosen, the vehicle seatback must be at or above the center of the child’s ears. If the seatback is lower than the center of the child’s ears, a high back booster seat should be used.

- If the booster seat is compatible with your vehicle, place the child in the booster seat and check the various adjustments to be sure the booster seat is compatible with the child. Always follow all recommended procedures.

All U.S. states and Canadian provinces or territories require that infants and small children be restrained in an approved child restraint at all times while the vehicle is being operated.

The instructions in this section apply to booster seat installation in the rear seats or the front passenger seat.

**Booster seat installation**

**WARNING**

To avoid injury to child, do not use the lap/shoulder belt in the Automatic Locking Retractor (ALR) mode when using a booster seat with the seat belts.

For additional information, refer to all Warnings and Cautions in the “Child safety”, “Child restraints” and “Booster seats” sections of this manual before installing a child restraint.
Follow these steps to install a booster seat in the rear seat or in the front passenger seat:

1. **If you must install a booster seat in the front seat, move the seat to the rearmost position.**

2. Position the booster seat on the seat. Only place it in a front-facing direction. Always follow the booster seat manufacturer’s instructions.

3. **Front passenger position**
   - The booster seat should be positioned on the vehicle seat so that it is stable.
   - If necessary, adjust or remove the head restraint/headrest to obtain the correct booster seat fit. If the head restraint/headrest is removed, store it in a secure place. **Be sure to reinstall the head restraint/headrest when the booster seat is removed.** For additional information, refer to “Head restraints/headrests” in this section.

4. Position the lap portion of the seat belt low and snug on the child’s hips. Be sure to follow the booster seat manufacturer’s instructions for adjusting the seat belt routing.

5. Pull the shoulder belt portion of the seat belt toward the retractor to take up extra slack. Be sure the shoulder belt is positioned across the top, middle portion of the child’s shoulder. Be sure to follow the booster seat manufacturer’s instructions for adjusting the seat belt routing.

6. Follow the warnings, cautions and instructions for properly fastening a seat belt shown in “Three-point type seat belt with retractor” in this section.

If the seating position does not have an adjustable head restraint/headrest and it is interfering with the proper booster seat fit, try another seating position or a different booster seat.
7. If the booster seat is installed in the front passenger seat, place the ignition switch in the ON position. The front passenger air bag status light may or may not illuminate, depending on the size of the child and the type of booster seat being used. For additional information, refer to ‘Front passenger air bag and status light’ in this section.

**SUPPLEMENTAL RESTRAINT SYSTEM (SRS)**

**PRECAUTIONS ON SRS**

This SRS section contains important information concerning the following systems:
- Driver and front passenger supplemental front-impact air bag (NISSAN Advanced Air Bag System)
- Front seat-mounted side-impact supplemental air bag
- Roof-mounted curtain side-impact and rollover supplemental air bag
- Seat belt with pretensioner(s) (front seats)

**Supplemental front-impact air bag system**

The NISSAN Advanced Air Bag System can help cushion the impact force to the head and chest of the driver and front passenger in certain frontal collisions.

**Front seat-mounted side-impact supplemental air bag system**

This system can help cushion the impact force to the chest area of the driver and front passenger in certain side-impact collisions. The side air bags are designed to inflate on the side where the vehicle is impacted.

**Roof-mounted curtain side-impact and rollover supplemental air bag system**

This system can help cushion the impact force to the head of occupants in front and rear outboard seating positions in certain side-impact collisions. The curtain air bags are designed to inflate on the side where the vehicle is impacted. In a rollover, the curtain air bags are designed to inflate and remain inflated for a short time.

The SRS is designed to supplement the crash protection provided by the driver and front passenger seat belts and is **not a substitute** for them. Seat belts should always be correctly worn and the occupant seated a suitable distance away from the steering wheel, instrument panel and door finishers. For additional information, refer to ‘Seat belts’ in this section.

The supplemental air bags operate only when the ignition switch is placed in the ON position.

After placing the ignition switch in the ON position, the supplemental air bag warning light illuminates. The supplemental air bag warning light will turn off after about 7 seconds if the system is operational.
WARNING

- The front air bags ordinarily will not inflate in the event of a side impact, rear impact, rollover, or lower severity frontal collision. Always wear your seat belts to help reduce the risk or severity of injury in various kinds of accidents.
- The front passenger air bag will not inflate if the passenger air bag status light is lit. For additional information, refer to “Front passenger air bag and status light” in this section.

- The seat belts and the front air bags are most effective when you are sitting well back and upright in the seat. The front air bags inflate with great force. Even with the NISSAN Advanced Air Bag System, if you are unrestrained, leaning forward, sitting sideways or out of position in any way, you are at greater risk of injury or death in a crash. You may also receive serious or fatal injuries from the front air bag if you are up against it when it inflates. Always sit back against the seatback and as far away as practical from the steering wheel or instrument panel. Always properly use the seat belts.
- The driver and front passenger seat belt buckles are equipped with sensors that detect if the seat belts are fastened. The NISSAN Advanced Air Bag System monitors the severity of a collision and seat belt usage, then inflates the air bags as needed. Failure to properly wear seat belts can increase the risk or severity of injury in an accident.
• The front passenger seat is equipped with an occupant classification sensor (weight sensor) that turns the front passenger air bag OFF under some conditions. This sensor is only used in this seat. Failure to be properly seated and wearing the seat belt can increase the risk or severity of injury in an accident. For additional information, refer to “Front passenger air bag and status light” in this section.

• Keep hands on the outside of the steering wheel. Placing them inside the steering wheel rim could increase the risk that they are injured when the front air bag inflates.
WARNING

- Never let children ride unrestrained or extend their hands or face out of the window. Do not attempt to hold them in your lap or arms. Some examples of dangerous riding positions are shown in the illustrations.

- Children may be severely injured or killed when the front air bags, side air bags or curtain air bags inflate if they are not properly restrained. Pre-teens and children should be properly restrained in the rear seat, if possible.
WARNING

- Even with the NISSAN Advanced Air Bag System, never install a rear-facing child restraint in the front seat. An inflating front air bag could seriously injure or kill your child. For additional information, refer to “Child restraints” in this section.
WARNING

Front seat-mounted side-impact supplemental air bags and roof-mounted curtain side-impact and rollover supplemental air bags:

- The side air bags and curtain air bags ordinarily will not inflate in the event of a frontal impact, rear impact, or lower severity side collision. Always wear your seat belts to help reduce the risk or severity of injury in various kinds of accidents.

WARNING

- The seat belts, the side air bags and curtain air bags are most effective when you are sitting well back and upright in the seat with both feet on the floor. The side air bag and curtain air bag inflate with great force. Do not allow anyone to place their hand, leg or face near the side air bag on the side of the seatback of the front seat or near the side roof rails. Do not allow anyone sitting in the front seats or rear outboard seats to extend their hand out of the window or lean against the door. Some examples of dangerous riding positions are shown in the previous illustrations.

WARNING

- When sitting in the rear seat, do not hold onto the seatback of the front seat. If the side air bag inflates, you may be seriously injured. Be especially careful with children, who should always be properly restrained. Some examples of dangerous riding positions are shown in the illustrations.

- Do not use seat covers on the front seatbacks. They may interfere with side air bag inflation.
1-50 Safety—Seats, seat belts and supplemental restraint system
NISSAN Advanced Air Bag System (front seats)

1. Top tether anchor
2. Rear seat belts
3. Roof-mounted curtain side-impact and rollover supplemental air bag
4. Head restraints/headrests
5. Front seat belts
6. Supplemental front-impact air bags
7. Front crash zone sensor
8. Pressure sensors in door (front passenger side shown; driver's side similar)
9. Front seats
10. Occupant classification sensor (weight sensor)
11. Satellite crash zone sensor
12. Seat belt with pretensioner(s) (front seats)
13. Front seat-mounted side-impact supplemental air bag
14. Rear seats
15. LATCH (Lower Anchors and Tethers for Children) system
16. Satellite crash zone sensor

Safety—Seats, seat belts and supplemental restraint system 1-51
**WARNING**

To ensure proper operation of the passenger’s NISSAN Advanced Airbag System, please observe the following items.

- Do not allow a passenger in the rear seat to push or pull on the seatback pocket.
- Do not place heavy loads heavier than 9.1 lbs. (4 kg) on the seatback, head restraint/headrest or in the seatback pocket.
- Make sure that there is nothing pressing against the rear of the seatback, such as a child restraint installed in the rear seat or an object stored on the floor.
- Make sure that there is no object placed between the seat cushion and center console or between the seat cushion and the door.
- If a forward-facing child restraint is installed in the front passenger seat, do not position the front passenger seat so the child restraint contacts the instrument panel. If the child restraint does contact the instrument panel, the system may determine the seat is occupied and the passenger air bag may deploy in a collision. Also the front passenger air bag status light may not illuminate. For additional information, refer to “Child restraints” in this section.
- Confirm the operating condition with the front passenger air bag status light.
- If you notice that the front passenger air bag status light is not operating as described in this section, get the occupant classification system checked. It is recommended that you visit a NISSAN dealer for this service.
- Until you have confirmed with a dealer that your passenger seat occupant classification system is working properly, position the occupants in the rear seating positions.

- Do not position the front passenger seat so it contacts the rear seat. If the front seat does contact the rear seat, the air bag system may determine a sensor malfunction has occurred and the front passenger air bag status light may illuminate and the supplemental air bag warning light may flash.

This vehicle is equipped with the NISSAN Advanced Air Bag System for the driver and front passenger seats. This system is designed to meet certification requirements under U.S. regulations. It is also permitted in Canada. All of the information, cautions and warnings in this manual must be followed.

The driver supplemental front-impact air bag is located in the center of the steering wheel. The front passenger supplemental front-impact air bag is mounted in the dashboard above the glove box. The front air bags are designed to inflate in higher severity frontal collisions, although they may inflate if the forces in another type of collision are similar to those of a higher severity frontal impact. They may not inflate in certain frontal collisions. Vehicle
damage (or lack of it) is not always an indication of proper front air bag system operation.

The NISSAN Advanced Air Bag System monitors information from the crash zone sensor, the Air bag Control Unit (ACU). Inflator operation is based on the severity of a collision and seat belt usage for the driver. For the front passenger, the occupant classification sensor is also monitored. Based on information from the sensor, only one front air bag may inflate in a crash, depending on the crash severity and whether the front occupants are belted or unbelted. Additionally, the front passenger air bag may be automatically turned off under some conditions, depending on the weight detected on the front passenger seat and how the seat belt is used. If the front passenger air bag is OFF, the passenger air bag status light will be illuminated. For additional information, refer to “Front passenger air bag and status light” in this section. One front air bag inflating does not indicate improper performance of the system.

If you have any questions about your air bag system, it is recommended that you visit a NISSAN dealer to obtain information about the system. If you are considering modification of your vehicle due to a disability, you may also contact NISSAN. Contact information is contained in the front of this Owner's Manual.

When a front air bag inflates, a fairly loud noise may be heard, followed by the release of smoke. This smoke is not harmful and does not indicate a fire. Care should be taken to not inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

Front air bags, along with the use of seat belts, help to cushion the impact force on the face and chest of the front occupants. They can help save lives and reduce serious injuries. However, an inflating front air bag may cause facial abrasions or other injuries. Front air bags do not provide restraint to the lower body.

Even with NISSAN Advanced Air Bags, seat belts should be correctly worn and the driver and front passenger seated upright as far as practical away from the steering wheel or instrument panel. The front air bags inflate quickly in order to help protect the front occupants. Because of this, the force of the front air bag inflating can increase the risk of injury if the occupant is too close to, or is against, the front air bag module during inflation.

The front air bags deflate quickly after a collision.

The front air bags operate only when the ignition switch is placed in the ON position.

After placing the ignition switch in the ON position, the supplemental air bag warning light illuminates. The supplemental air bag warning light will turn off after about 7 seconds if the system is operational.
WARNING
The front passenger air bag is designed to automatically turn OFF under some conditions. Read this section carefully to learn how it operates. Proper use of the seat, seat belt and child restraints is necessary for most effective protection. Failure to follow all instructions in this manual concerning the use of seats, seat belts and child restraints can increase the risk or severity of injury in an accident.

Front passenger air bag and status light

Status light
The front passenger seat is equipped with an occupant classification sensor (weight sensor) that turns the front passenger air bag on or off depending on the weight applied to the front passenger seat. The status of the front passenger air bag (ON or OFF) is indicated by the front passenger air bag status light, which is located on the instrument panel.

After the ignition switch is placed in the "ON" position, the front passenger air bag status light on the instrument panel illuminates for about 7 seconds and then turns off or remains illuminated depending on the front passenger seat occupied status. The light operates as follows:

<table>
<thead>
<tr>
<th>CONDITION</th>
<th>DESCRIPTION</th>
<th>PASSENGER AIR BAG INDICATOR LIGHT (致癌)</th>
<th>FRONT PASSENGER AIR BAG STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty</td>
<td>Empty front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Nobody/Somebody</td>
<td>Bag or Child or Child Restraint or Small Adult in front passenger seat</td>
<td>ON (illuminated)</td>
<td>INHIBITED</td>
</tr>
<tr>
<td>Adult</td>
<td>Adult in the front passenger seat</td>
<td>OFF (dark)</td>
<td>ACTIVATED</td>
</tr>
</tbody>
</table>

In addition to the above, certain objects placed on the front passenger seat may also cause the light to operate as described above depending on their weight.

For additional information, refer to “Normal operation” and “Troubleshooting” in this section.

1-54 Safety—Seats, seat belts and supplemental restraint system
Front passenger air bag

The front passenger air bag is designed to automatically turn OFF when the vehicle is operated under some conditions as described below in accordance with U.S. regulations. If the front passenger air bag is OFF, it will not inflate in a crash. The driver air bag and other air bags in your vehicle are not part of this system.

The purpose of the regulation is to help reduce the risk of injury or death from an inflating air bag to certain front passenger seat occupants, such as children, by requiring the air bag to be automatically turned OFF. Certain sensors are used to meet the requirements.

The occupant classification sensor in this vehicle is a weight sensor. It is designed to detect an occupant and objects on the seat by weight. For example, if a child is in the front passenger seat, the NISSAN Advanced Air Bag System is designed to turn the front passenger air bag OFF in accordance with the regulations. Also, if a child restraint of the type specified in the regulations is on the seat, its weight and the child's weight can be detected and cause the air bag to turn OFF.

Front passenger seat adult occupants who are properly seated and using the seat belt as outlined in this manual should not cause the front passenger air bag to be automatically turned OFF. For small adults it may be turned OFF; however if the occupant takes his/her weight off the seat cushion (for example, by not sitting upright, by sitting on an edge of the seat, or by otherwise being out of position), this could cause the sensor to turn the air bag OFF. Always be sure to be seated and wearing the seat belt properly for the most effective protection by the seat belt and supplemental air bag.

NISSAN recommends that pre-teens and children be properly restrained in a rear seat. NISSAN also recommends that appropriate child restraints and booster seats be properly installed in a rear seat. If this is not possible, the occupant classification sensor is designed to operate as described above to turn the front passenger air bag OFF for specified child restraints as required by the regulations. Failing to properly secure child restraints and to use the ALR mode may allow the restraint to tip or move in a collision or sudden stop. This can also result in the passenger air bag inflating in a crash instead of being OFF. For additional information, refer to ‘Child restraints’ in this section.

If the front passenger seat is not occupied, the front passenger air bag is designed not to inflate in a crash. However, heavy objects placed on the seat could result in air bag inflation, because of the object's weight detected by the occupant classification sensor. Other conditions could also result in air bag inflation, such as if a child is standing on the seat, or if two children are on the seat, contrary to the instructions in this manual. Always be sure that you and all vehicle occupants are seated and restrained properly.

Using the front passenger air bag status light, you can monitor when the front passenger air bag is automatically turned OFF. If an adult occupant is in the seat but the front passenger air bag status light is illuminated (indicating that the air bag is OFF), it could be that the person is a small adult, or is not sitting on the seat properly or not using the seat belt properly.

If a child restraint must be used in the front seat, the front passenger air bag status light may or may not be illuminated, depending on the size of the child and the type of child restraint being used. If the air
bag status light is not illuminated (indicating that the air bag might inflate in a crash), it could be that the child restraint or seat belt is not being used properly. Make sure that the child restraint is installed properly, the seat belt is used properly and the occupant is positioned properly. If the air bag status light is still not illuminated, reposition the occupant or child restraint in a rear seat.

If the front passenger air bag status light will not illuminate even though you believe that the child restraint, the seat belts and the occupant are properly positioned, it is recommended that you visit a NISSAN dealer. A NISSAN dealer can check system status by using a special tool. However, until you have confirmed with a dealer that your air bag is working properly, reposition the occupant or child restraint in a rear seat.

The NISSAN Advanced Air Bag System and front passenger air bag status light will take a few seconds to register a change in the front passenger seat status. This is normal system operation and does not indicate a malfunction.

If a malfunction occurs in the front passenger air bag system, the supplemental air bag warning light located in the meter and gauges area of the instrument panel, will be illuminated (blinking or steadily lit). Have the system checked. It is recommended that you visit a NISSAN dealer for this service.

Normal operation

In order for the occupant classification sensor system to classify the front passenger based on weight, please follow the precautions and steps outlined below.

Precautions

- Make sure that there are no objects weighing over 9.1 lbs. (4 kg) hanging on the seat or placed in the seatback pocket.
- Make sure that a child restraint or other object is not pressing against the rear of the seatback.
- Make sure that a rear passenger is not pushing or pulling on the back of the front passenger seat.
- Make sure that the front passenger seat or seatback is not forced back against an object on the seat or floor behind it.
- Make sure that there is no object placed under the front passenger seat.

Steps

1. Adjust the seat as outlined in the “Seats” section of this manual. Sit upright, leaning against the seatback, and centered on the seat cushion with your feet comfortably extended to the floor.
2. Make sure there are no objects on your lap.
3. Fasten the seat belt as outlined in the “Seat belts” section of this manual. Front passenger seat belt buckle status is monitored by the occupant classification system, and is used as an input to determine occupancy status. So, it is highly recommended that the front passenger fasten their seat belt.
4. Remain in this position for 30 seconds allowing the system to classify the front passenger before the vehicle is put into motion.
5. Ensure proper classification by checking the front passenger air bag status light.
NOTE:
This vehicle’s occupant classification sensor system generally keeps the classification locked during driving, so it is important that you confirm that the front passenger is properly classified prior to driving. However, the occupant classification sensor may recalculate the weight of the occupant under some conditions (both while driving and when stopped), so front passenger seat occupants should continue to remain seated as outlined above.

Troubleshooting
If you think the front passenger air bag status light is incorrect:
1. If the light is ON with an adult occupying the front passenger seat:
   • Occupant is a small adult — the air bag light is functioning as intended. The front passenger air bag is suppressed. However, if the occupant is not a small adult, then this may be due to the following conditions that may be interfering with the weight sensors:
     • Occupant is not sitting upright, leaning against the seatback, and centered on the seat cushion with his/her feet comfortably extended to the floor.
     • A child restraint or other object pressing against the rear of the seatback.
     • A rear passenger pushing or pulling on the back of the front passenger seat.
     • Forcing the front seat or seatback against an object on the seat or floor behind it.
     • An object placed under the front passenger seat.
     • An object placed between the seat cushion and center console or between the seat cushion and the door.
   If the vehicle is moving, please come to a stop when it is safe to do so. Check and correct any of the above conditions. Restart the vehicle and wait 1 minute.

   NOTE:
   A system check will be performed during which the front passenger air bag status light will remain lit for about 7 seconds initially.
   If the light is still ON after this, the person should be advised not to ride in the front passenger seat and the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

2. If the light is OFF with a small adult, child or child restraint occupying the front passenger seat.
   This may be due to the following conditions that may be interfering with the weight sensors:
   • Small adult or child is not sitting upright, leaning against the seatback, and centered on the seat cushion with his/her feet comfortably extended to the floor.
   • The child restraint is not properly installed, as outlined in the ‘Child restraints’ section of this manual.
   • An object weighing over 9.1 lbs. (4 kg) hanging on the seat or placed in the seatback pocket.

Safety—Seats, seat belts and supplemental restraint system 1-57
• A child restraint or other object pressing against the rear of the seatback.
• A rear passenger pushing or pulling on the back of the front passenger seat.
• Forcing the front seat or seatback against an object on the seat or floor behind it.
• An object placed under the front passenger seat.
• An object placed between the seat cushion and center console.

If the vehicle is moving, please come to a stop when it is safe to do so. Check and correct any of the above conditions. Restart the vehicle and wait 1 minute.

NOTE:
A system check will be performed during which the front passenger air bag status light will remain lit for about 7 seconds initially.

If the light is still OFF after this, the small adult, child or child restraint should be repositioned in the rear seat and the vehicle should be checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

1. If the light is ON with a front passenger and objects on the front passenger seat, the vehicle should be checked. It is recommended that you visit a NISSAN dealer as soon as possible.

Other supplemental front-impact air bag precautions

WARNING
• Do not place any objects on the steering wheel pad or on the instrument panel. Also, do not place any objects between any occupant and the steering wheel or instrument panel. Such objects may become dangerous projectiles and cause injury if the front air bags inflate.
• Immediately after inflation, several front air bag system components will be hot. Do not touch them; you may severely burn yourself.
• No unauthorized changes should be made to any components or wiring of the supplemental air bag system. This is to prevent accidental inflation of the supplemental air bag or damage to the supplemental air bag system.

3. If the light is OFF with no front passenger and no objects on the front passenger seat, the vehicle should be checked. It is recommended that you visit a NISSAN dealer as soon as possible.

• Do not make unauthorized changes to your vehicle’s electrical system, suspension system or front end structure. This could affect proper operation of the front air bag system.
• Tampering with the front air bag system may result in serious personal injury. Tampering includes changes to the steering wheel and the instrument panel assembly by placing material over the steering wheel pad and above the instrument panel or by installing additional trim material around the air bag system.
• Removing or modifying the front passenger seat may affect the function of the air bag system and result in serious personal injury.
• Modifying or tampering with the front passenger seat may result in serious personal injury. For example, do not change the front seats by placing material on the seat cushion or by installing additional trim material, such as seat covers, on the seat that are not specifically designed to assure proper air bag operation. Additionally, do not stow any objects under the front passenger seat or the seat cushion and seatback. Such objects may interfere with the proper operation of the occupant classification sensor (weight sensor).

• No unauthorized changes should be made to any components or wiring of the seat belt system. This may affect the front air bag system. Tampering with the seat belt system may result in serious personal injury.

• It is recommended that you visit a NISSAN dealer for work on and around the front air bag. It is also recommended that you visit a NISSAN dealer for installation of electrical equipment. The Supplemental Restraint System (SRS) wiring harnesses* should not be modified or disconnected. Unauthorized electrical test equipment and probing devices should not be used on the air bag system.

• A cracked windshield should be replaced immediately by a qualified repair facility. A cracked windshield could affect the function of the supplemental air bag system.

*The SRS wiring harness connectors are yellow and orange for easy identification.

When selling your vehicle, we request that you inform the buyer about the front air bag system and guide the buyer to the appropriate sections in this Owner’s Manual.

Front seat-mounted side-impact supplemental air bag and roof-mounted curtain side-impact and rollover supplemental air bag systems

The side air bags are located in the outside of the seatback of the front seats. The curtain air bags are located in the side roof rails. All of the information, cautions and warnings in this manual must be followed. The side air bags and curtain air bags are designed to inflate in higher severity side collisions, although they may inflate if the forces in another type of collision

Safety—Seats, seat belts and supplemental restraint system 1-59
are similar to those of a higher severity impact. They are designed to inflate on the side where the vehicle is impacted. They may not inflate in certain side collisions.

Curtain airbags are also designed to inflate in certain types of rollover collisions or near rollovers. As a result, certain vehicle movements (for example, during severe off-roading) may cause the curtain airbags to inflate.

Vehicle damage (or lack of it) is not always an indication of proper side airbag and curtain airbag operation.

When the side airbags and curtain airbags inflate, a fairly loud noise may be heard, followed by release of smoke. This smoke is not harmful and does not indicate a fire. Care should be taken not to inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly.

Side airbags, along with the use of seat belts, help to cushion the impact force on the chest and pelvic area of the front occupants. Curtain airbags help to cushion the impact force to the head of occupants in the front and rear outboard seating positions. They can help save lives and reduce serious injuries. However, an inflating side airbag and curtain airbag may cause abrasions or other injuries. Side airbags and curtain airbags do not provide restraint to the lower body.

The seat belts should be correctly worn and the driver and passenger seated upright as far as practical away from the side airbag. Rear seat passengers should be seated as far away as practical from the door finishers and side roof rails. The side airbags and curtain airbags inflate quickly in order to help protect the front and rear outboard occupants. Because of this, the force of the side airbag and curtain airbag inflating can increase the risk of injury if the occupant is too close to, or is against, these airbag modules during inflation. The side airbag and will deflake quickly after the collision is over.

The curtain airbag will remain inflated for a short time. The side airbags and curtain airbags operate only when the ignition switch is placed in the ON position.

After placing the ignition switch in the ON position, the supplemental airbag warning light illuminates. The supplemental airbag warning light will turn off after about 7 seconds if the system is operational.

**WARNING**

- Do not place any objects near the seatback of the front seats. Also, do not place any objects (an umbrella, bag, etc.) between the front door finisher and the front seat. Such objects may become dangerous projectiles and cause injury if a side airbag inflates.
- Right after inflation, several side airbag and curtain airbag system components will be hot. Do not touch them; you may severely burn yourself.
- No unauthorized changes should be made to any components or wiring of the side airbag and curtain airbag systems. This is to prevent damage to or accidental inflation of the side airbag and curtain airbag or damage to the side airbag and curtain airbag systems.
Do not make unauthorized changes to your vehicle’s electrical system, suspension system or side panel. This could affect proper operation of the side air bag and curtain air bag systems.

Tampering with the side air bag system may result in serious personal injury. For example, do not change the front seats by placing material near the seatbacks or by installing additional trim material, such as seat covers, around the side air bag.

It is recommended that you visit a NISSAN dealer for work on and around the side air bag and curtain air bag systems. It is also recommended that you visit a NISSAN dealer for installation of electrical equipment. Unauthorized electrical test equipment and probing devices should not be used on the side air bag or curtain air bag systems.

The SRS wiring harness connectors are yellow and orange for easy identification.

Seat belt with pretensioner(s) (front seats)

**WARNING**

- The pretensioner(s) cannot be reused after activation. They must be replaced together with the retractor and buckle as a unit.
- If the vehicle becomes involved in a collision but pretensioner(s) are not activated, be sure to have the pretensioner system checked and, if necessary, replaced. It is recommended that you visit a NISSAN dealer for this service.
- No unauthorized changes should be made to any components or wiring of the pretensioner system. This is to prevent damage to or accidental activation of the pretensioner(s). Tampering with the pretensioner system may result in serious personal injury.

When selling your vehicle, we request that you inform the buyer about the side air bag and curtain air bag systems and guide the buyer to the appropriate sections in this Owner’s Manual.

It is recommended that you visit a NISSAN dealer for work on and around the pretensioner system. It is also recommended that you visit a NISSAN dealer for installation of electrical equipment. Unauthorized electrical test equipment and probing devices should not be used on the pretensioner system.

If you need to dispose of the pretensioner(s) or scrap the vehicle, it is recommended that you visit a NISSAN dealer for this service. Incorrect disposal procedures could cause personal injury.

The pretensioner system may activate with the supplemental air bag system in certain types of collisions. Working with the seat belt retractor, the pretensioner(s) help tighten the seat belt when the vehicle becomes involved in certain types of collisions, helping to restrain front seat occupants.

The pretensioner(s) are encased within the seat belt retractor and to the seat belt anchor affixed to the floor of the vehicle. These seat belts are used the same way as conventional seat belts.
When pretensioner(s) activate, smoke is released and a loud noise may be heard. This smoke is not harmful and does not indicate a fire. Care should be taken not to inhale it, as it may cause irritation and choking. Those with a history of a breathing condition should get fresh air promptly. After the pretensioner(s) activation, load limiters allow the seat belt to release webbing (if necessary) to reduce forces against the chest.

The supplemental air bag warning light is used to indicate malfunctions in the pretensioner system. For additional information, refer to “Supplemental air bag warning light” in this section. If the operation of the supplemental air bag warning light indicates there is a malfunction, have the system checked. It is recommended that you visit a NISSAN dealer for this service.

When selling your vehicle, we request that you inform the buyer about the pretensioner system and guide the buyer to the appropriate sections in this Owner’s Manual.

### WARNING
Do not use a rear-facing child restraint on a seat protected by an air bag in front of it. If the air bag deploys, it may cause serious injury or death.

---

1. SRS Air bag warning labels

   The warning labels are located on the surface of the sun visor.

### SUPPLEMENTAL AIR BAG WARNING LABELS

Warning labels about the supplemental front-impact air bag system are placed in the vehicle as shown in the illustration.
SUPPLEMENTAL AIR BAG WARNING LIGHT

The supplemental air bag warning light, displaying ⚠️ in the instrument panel, monitors the circuits for the air bag systems, pretensioner(s) and all related wiring. When the ignition switch is placed in the ON position, the supplemental air bag warning light illuminates for about 7 seconds and then turns off. This means the system is operational.

If any of the following conditions occur, the front air bag, side air bag, curtain air bag and pretensioner systems need servicing:

- The supplemental air bag warning light remains on after approximately 7 seconds.
- The supplemental air bag warning light flashes intermittently.
- The supplemental air bag warning light does not come on at all.

Under these conditions, the front air bag, side air bag, curtain air bag or pretensioner systems may not operate properly. They must be checked and repaired. It is recommended that you visit a NISSAN dealer for this service.

NOTE:

In the event of a crash involving an air bag deployment (side, front or both), the vehicle’s hazard lamps (turn indicators) will turn ON automatically.

Repair and replacement procedure

The front air bags, side air bags, curtain air bags and pretensioner(s) are designed to inflate on a one-time-only basis. As a reminder, unless it is damaged, the supplemental air bag warning light remains illuminated after inflation has occurred. These systems should be repaired and/or replaced as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

When maintenance work is required on the vehicle, the front air bags, side air bags, curtain air bags, pretensioner(s) and related parts should be pointed out to the person performing the maintenance. The ignition switch should always be placed in the LOCK position when working under the hood or inside the vehicle.
WARNING

- Once a front air bag, side air bag, or curtain air bag has inflated, the air bag module will not function again and must be replaced. Additionally, the activated pretensioner(s) must also be replaced. The air bag module and pretensioner(s) should be replaced. It is recommended that you visit a NISSAN dealer for this service. However, the air bag module and pretensioner(s) cannot be repaired.

- The front air bag, side air bag, curtain air bag systems and the pretensioner system should be inspected if there is any damage to the front end or side portion of the vehicle. It is recommended that you visit a NISSAN dealer for this service.

- If you need to dispose of the supplemental air bag or pretensioner systems or scrap the vehicle, it is recommended that you visit a NISSAN dealer. Incorrect disposal procedures could cause personal injury.

- If there is an impact to your vehicle from any direction, your Occupant Classification Sensor (OCS) should be checked to verify it is still functioning correctly. It is recommended that you visit a NISSAN dealer for this service. The OCS should be checked even if no air bags deploy as a result of the impact. Failure to verify proper OCS function may result in an improper air bag deployment resulting in injury or death.

   Odometer
   Twin trip odometer
   Outside temperature display
3. Speedometer
   Warning and indicator lights
4. Fuel gauge
5. Engine coolant temperature gauge

SPEEDOMETER AND ODOMETER
This vehicle is equipped with a speedometer and odometer. The speedometer is located on the right side the meter cluster. The odometer is located within the vehicle information display (Type A — if so equipped) or the trip computer (Type B — if so equipped) to the left of the speedometer.
Speedometer
The speedometer indicates the vehicle speed.

Odometer/Twin trip odometer
The odometer 2 and the twin trip odometer 1 are displayed when the ignition switch is placed in the ON position.
The odometer records the total distance the vehicle has been driven.
The twin trip odometer records the distance of individual trips.

Changing the display
Press the button on the steering wheel to change the display as follows:
Accel guide/Average fuel economy → Instant fuel economy/Average fuel economy → Average fuel economy → Average speed → Distance to empty → Trip A → Trip B

Instruments and controls 2-5
Resetting the trip odometer

Press the button on the steering wheel for more than 1 second to reset the currently displayed trip odometer to zero.

LOOSE FUEL CAP warning message

For vehicles without a vehicle information display: Push the reset button A for more than 1 second to reset the LOOSE FUEL CAP warning message in the trip computer B after the fuel cap has been tightened. For additional information, refer to “Fuel-filler cap” in the “Pre-driving checks and adjustments” section of this manual.

For vehicles with a vehicle information display: For additional information, refer to “Vehicle information display warnings and indicators” in the section.

Check tire pressure warning message (if so equipped)

The CHECK TIRE PRES (pressure) warning message is displayed when the low tire pressure warning light is illuminated and low tire pressure is detected. Check and adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label. The CHECK TIRE PRES warning message turns off when the low tire pressure warning light turns off.
The low tire pressure warning light remains illuminated until the tires are inflated to the recommended COLD tire pressure. The CHECK TIRE PRES warning message is displayed each time the ignition switch is placed in the ON position as long as the low tire pressure warning light remains illuminated. For additional information, refer to ‘Low tire pressure warning light’ in the ‘Instruments and controls’ section, ‘Tire Pressure Monitoring System (TPMS)’ in the ‘Starting and driving’ section, and ‘Wheels and tires’ in the ‘Do-it-yourself’ section of this manual.

TACHOMETER

The tachometer indicates engine speed in revolutions per minute (rpm).

Do not rev the engine into the red zone ①.

![Tachometer illustration](LIC2219)

**CAUTION**

When engine speed approaches the red zone, shift to a higher gear or reduce engine speed. Operating the engine in the red zone may cause serious engine damage.

ENGINE COOLANT TEMPERATURE GAUGE

**NOTE:**

The ignition switch must be placed in the ON position for the gauge to give a reading.

The gauge indicates the engine coolant temperature. The engine coolant temperature is within the normal range when the reading is within the zone ① shown in the illustration.
The engine coolant temperature varies with the outside air temperature and driving conditions.

**CAUTION**

If the gauge indicates a coolant temperature near the hot (H) end of the normal range, reduce vehicle speed to decrease the temperature. If the gauge is over the normal range, stop the vehicle as soon as safely possible. If the engine is overheated, continued operation of the vehicle may seriously damage the engine. For additional information, refer to “If your vehicle overheats” in the “In case of emergency” section for immediate action required.

**FUEL GAUGE**

**NOTE:**

The ignition switch must be placed in the ON position for the gauge to give a reading.

The gauge indicates the approximate fuel level in the tank.

The gauge may move slightly during braking, turning, acceleration, or going up or down hills.
The low fuel warning light comes on when the amount of fuel in the tank is getting low. Refill the fuel tank before the gauge registers 0 (Empty).

The arrow on the fuel pump symbol indicates the fuel-filler location.

**CAUTION**

- If the vehicle runs out of fuel, the Malfunction Indicator Light (MIL) may come on. Refuel as soon as possible. After a few driving trips, the light should turn off. If the light remains on after a few driving trips, have the vehicle inspected. It is recommended that you visit a NISSAN dealer for this service.

- For additional information, refer to “Malfunction Indicator Light (MIL)” in this section.

### TRIP COMPUTER (if so equipped)

When the ignition switch is placed in the ON position, the modes of the trip computer can be selected by pressing the button on the steering wheel. The following modes can be selected:

- Trip A
- Trip B
- ECO Pedal Indicator (if so equipped)
- Instant fuel economy
- Average fuel economy
- Average speed

- Distance to empty
- Trip computer reset
Trip symbol: A or B

Trip A
Measures the distance of one specific trip.

Trip B
Measures the distance of a second specific trip.

ECO Pedal Indicator Display (if so equipped)
Use the ECO Pedal Indicator for improving fuel economy.

When the ECO Pedal Indicator bar is in the green range, it displays the recommended accelerator pedal position to optimize fuel economy.

If the ECO Pedal Indicator bar is out of the green range, the vehicle will not provide optimized fuel economy.

NOTE:
The ECO Pedal Indicator’s bar is not displayed when the cruise control is in operation.

2-10 Instruments and controls
AVE & INST fuel economy

When Average & Instant fuel economy information is displayed, there will be different sections to read:

A Instant fuel economy (BAR graph)
B Average fuel economy (BAR & DIGIT)

The bar graph is not displayed when vehicle speed is 0 mph (0 km/h).

Instant fuel economy

The instant fuel economy mode shows the instant fuel economy. The display updates instantly when driving.

Average fuel economy

The average fuel economy mode shows the average fuel economy since the last reset. Resetting is done by pressing the button on the steering wheel for more than approximately 1 second. The display is updated every 30 seconds. At about the first 1/3 mile (500 m) after a reset, the display shows (----).

Average speed

The average speed mode shows the average vehicle speed since last reset. Resetting is done by pressing the button on the steering wheel for more than approximately 1 second. The display is updated every 30 seconds. The first 30 seconds after a reset, the display shows (----).

Distance to empty

The distance to empty (dte) mode provides you with an estimation of the distance that can be driven before refueling. The dte is constantly being calculated, based on the amount of fuel in the fuel tank and the actual fuel economy which will depend on driving conditions. Dashes (--) indicate that fuel remaining volume cannot be read by the fuel pump and should be refilled as soon as possible.

The display is updated every 30 seconds.
NOTE:
When driving uphill or rounding curves, the fuel in the tank shifts, which may momentarily change the display.

Trip computer reset
To reset Trip A, Trip B, AVG/\text{mpg}, or AVG/mph, go to the desired mode on the trip computer and hold the \( \text{button} \) on the steering wheel for more than 3 seconds.

OUTSIDE TEMPERATURE DISPLAY
The outside temperature function provides a display of the outside temperature when the ignition switch is placed in the ON position.

The display of positive temperatures is unsigned (blank), negative temperatures are prefixed with a minus sign.

The outside temperature will always be visible on the left side of the display.

Instruments and controls 2-13
CHECKING LIGHTS
With all doors closed, apply the parking brake, fasten the seat belts and place the ignition switch in the "ON" position without starting the engine. The following lights (if so equipped) will come on:

- [ ] or [BRACE] , [PS] or [ ]

The following lights (if so equipped) will come on briefly and then go off:

- [ ] or [ABS] , [ ] , [ ] , [ ] , [ ] , [SPORT] , [ ]

If any light does not come on or operate in a way other than described, it may indicate a burned-out bulb and/or a system malfunction. Have the system checked. It is recommended that you visit a NISSAN dealer for this service.

Some indicators and warnings are also displayed on the vehicle information display between the speedometer and tachometer. For additional information, refer to "Vehicle information display" in this section.

WARNING LIGHTS
For additional information on warnings and indicators, refer to "Vehicle information display" in this section.

- [ABS] or [ ] Anti-lock Braking System (ABS) warning light

When the ignition switch is placed in the "ON" position, the ABS warning light illuminates and then turns off. This indicates the ABS is operational.

If the ABS warning light illuminates while the engine is running or while driving, it may indicate the ABS is not functioning properly. Have the system checked. It is recommended that you visit a NISSAN dealer for this service.

If an ABS malfunction occurs, the anti-lock function is turned off. The brake system then operates normally but without anti-lock assistance. For additional information, refer to "Brake system" in the "Starting and driving" section of this manual.

- [ ] Automatic Emergency Braking (AEB) system warning light (if so equipped)

This light comes on when the ignition switch is placed in the "ON" position. It turns off after the engine is started.

This light illuminates when the AEB system is set to "OFF" on the vehicle information display.

If the light illuminates when the AEB system is on, it may indicate that the system is unavailable. For additional information, refer to "Automatic Emergency Braking (AEB)" in the "Starting and driving" section of this manual.

- [ ] Brake warning light

This light functions for both the parking brake and the foot brake systems.

- [ ] Parking brake indicator

When the ignition switch is placed in the "ON" position, the light comes on when the parking brake is applied.
Low brake fluid warning light

When the ignition switch is placed in the ON position, the light warns of a low brake fluid level. If the light comes on while the engine is running, with the parking brake not applied, stop the vehicle and perform the following:

1. Check the brake fluid level. Add brake fluid as necessary. For additional information, refer to “Brake fluid” in the “Do-it-yourself” section of this manual.

2. If the brake fluid level is correct, have the warning system checked. It is recommended that you visit a NISSAN dealer for this service.

**WARNING**

- Your brake system may not be working properly if the warning light is on. Driving could be dangerous. If you judge it to be safe, drive carefully to the nearest service station for repairs. Otherwise, have your vehicle towed because driving it could be dangerous.

- Pressing the brake pedal with the engine stopped and/or a low brake fluid level may increase your stopping distance and braking will require greater pedal effort as well as pedal travel.

- If the brake fluid level is below the MINIMUM or MIN mark on the brake fluid reservoir, do not drive until the brake system has been checked. It is recommended that you visit a NISSAN dealer for this service.

**Anti-lock Braking System (ABS) warning indicator**

When the parking brake is released and the brake fluid level is sufficient, if both the brake warning light and the ABS warning light illuminate, it may indicate the ABS is not functioning properly. Have the brake system checked and, if necessary, repaired. It is recommended that you visit a NISSAN dealer for this service. Avoid high-speed driving and abrupt braking. For additional information, refer to “Anti-lock Braking System (ABS) warning light” in this section.

**Charge warning light**

If this light comes on while the engine is running, it may indicate the charging system is not functioning properly. Turn the engine off and check the generator belt. If the belt is loose, broken, missing, or if the light remains on, have your vehicle serviced immediately. It is recommended that you visit a NISSAN dealer for this service.

**CAUTION**

Do not continue driving if the generator belt is loose, broken or missing.

Door open warning light (if so equipped)

This light comes on when any of the doors are not closed securely while the ignition switch is in the ON position.

**Engine oil pressure warning light (if so equipped)**

This light warns of low engine oil pressure. If the light flickers or comes on during normal driving, pull off the road in a safe area, stop the engine immediately and call a NISSAN dealer or other authorized repair shop.

The engine oil pressure warning light is not designed to indicate a low oil level. Use the dipstick to check the oil level. For Instruments and controls 2-15
additional information, refer to ‘Engine oil’ in the “Do-it-yourself” section of this manual.

---

**CAUTION**

Running the engine with the engine oil pressure warning light on could cause serious damage to the engine almost immediately. Such damage is not covered by warranty. Turn off the engine as soon as it is safe to do so.

---

Low fuel warning light (if so equipped)

This light comes on when the fuel level in the fuel tank is getting low. Refuel as soon as it is convenient, preferably before the fuel gauge reaches 0 (Empty). There will be a small reserve of fuel in the tank when the fuel gauge reaches 0 (Empty).

---

Low tire pressure warning light

Your vehicle is equipped with a Tire Pressure Monitoring System (TPMS) that monitors the tire pressure of all tires except the spare. The low tire pressure warning light warns of low tire pressure or indicates that the TPMS is not functioning properly.

After the ignition switch is placed in the ON position, this light illuminates for about 1 second and turns off.

**Low tire pressure warning**

If the vehicle is being driven with low tire pressure, the warning light will illuminate. The “CHECK TIRE PRES” (vehicles without a vehicle information display) also appears in the trip computer or the “Tire Pressure Low – Add Air” (vehicles with a vehicle information display) appears in the vehicle information display.

When the low tire pressure warning light illuminates, you should stop and adjust the tire pressure of all four tires to the recommended COLD tire pressure shown on the Tire and Loading Information label located in the driver’s door opening. The low tire pressure warning light does not automatically turn off when the tire pressure is adjusted. After the tire is inflated to the recommended pressure, the vehicle must be driven at speeds above 16 mph (25 km/h) to activate the TPMS and turn off the low tire pressure warning light. Use a tire pressure gauge to check the tire pressure.

For vehicles without a vehicle information display, the low tire pressure warning light remains illuminated until the tires are inflated to the recommended COLD tire pressure. The ‘CHECK TIRE PRES’ warning message is displayed each time the ignition switch is placed in the ON position as long as the low tire pressure warning light remains illuminated.

For vehicles with a vehicle information display, the ‘Tire Pressure Low – Add Air’ warning appears each time the ignition switch is placed in the ON position as long as the low tire pressure warning light remains illuminated.

For additional information, refer to ‘Vehicle information display’ in this section, ‘Tire Pressure Monitoring System (TPMS)’ in the ‘Starting and driving’ and ‘In case of emergency’ sections of this manual.

**TPMS malfunction**

If the TPMS is not functioning properly, the low tire pressure warning light will flash for approximately 1 minute when the ignition switch is placed in the ON position. The light will remain on after 1 minute. Have the
system checked. It is recommended that you visit a NISSAN dealer for this service. The “CHECK TIRE PRES” warning message and “Tire Pressure Low—Add Air” warning does not appear if the low tire pressure warning light illuminates to indicate a TPMS malfunction.

For additional information, refer to “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section and “Tire pressure” in the “Do-it-yourself” section of this manual.

**WARNING**

- Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
- If the light does not illuminate with the ignition switch placed in the ON position, have the vehicle checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

**CAUTION**

- The TPMS is not a substitute for the regular tire pressure check. Be sure to check the tire pressure regularly.
- If the vehicle is being driven at speeds of less than 16 mph (25 km/h), the TPMS may not operate correctly.
- Be sure to install the specified size of tires to the four wheels correctly.

**WARNING**

- If the light illuminates while driving, avoid sudden steering maneuvers or abrupt braking, reduce vehicle speed, pull off the road to a safe location and stop the vehicle as soon as possible. Driving with under-inflated tires may permanently damage the tires and increase the likelihood of tire failure. Serious vehicle damage could occur and may lead to an accident and could result in serious personal injury or death. Check the tire pressure for all four tires. Adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label located in the driver’s door opening to turn the low tire pressure warning light off. If the light still illuminates while driving after adjusting the tire pressure, a tire may be flat or the TPMS may be malfunctioning. If you have a flat tire, replace it with a spare tire as soon as possible. If no tire is flat and all tires are properly inflated, have the vehicle checked. It is recommended that you visit a NISSAN dealer for this service.

**CAUTION**

- When replacing a wheel without the TPMS such as the spare tire, the TPMS will not function and the low tire pressure warning light will flash for approximately 1 minute. The light will remain on after 1 minute. Have your tires replaced and/or TPMS system reset as soon as possible. It is recommended that you visit a NISSAN dealer for these services.
- Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.

Instruments and controls 2-17
Low windshield-washer fluid warning light (if so equipped)

This light comes on when the windshield-washer fluid is at a low level. Add windshield-washer fluid as necessary. For additional information, refer to “Windshield-washer fluid” in the “Do-it-yourself” section of this manual.

Master warning light (if so equipped)

When the ignition switch is in the ON position, the master warning light illuminates if any of the following are displayed on the vehicle information display:

- No key warning
- Low washer fluid warning
- Parking brake release warning
- Door open warning
- Loose fuel cap warning
- Check tire pressure warning
- Emergency brake warning
- Lock warning
- I-Key system warning

For additional information, refer to “Vehicle information display” in this section.

Power steering warning light

WARNING

- If the engine is not running or is turned off while driving, the power assist for the steering will not work. Steering will be harder to operate.
- When the power steering warning light illuminates with the engine running, there will be no power assist for the steering. You will still have control of the vehicle but the steering will be harder to operate. Have the power steering system checked. It is recommended that you visit a NISSAN dealer for this service.

Seat belt warning light and chime

The light and chime remind you to fasten your seat belts. The light illuminates whenever the ignition switch is placed in the ON or START position and remains illuminated when the ignition switch is placed in the ON position, the power steering warning light illuminates. After starting the engine, the power steering warning light turns off. This indicates the power steering system is operational.

If the power steering warning light illuminates while the engine is running, it may indicate the power steering system is not functioning properly and may need servicing. Have the power steering system checked. It is recommended that you visit a NISSAN dealer for this service.

When the power steering warning light illuminates with the engine running, there will be no power assist for the steering but you will still have control of the vehicle. At this time, greater steering effort is required to operate the steering wheel, especially in sharp turns and at low speeds.

For additional information, refer to “Power steering” in the “Starting and driving” section of this manual.
until the driver's seat belt is fastened. At the same time, the chime sounds for about 6 seconds unless the driver's seat belt is securely fastened.

The seat belt warning light may also illuminate if the front passenger's seat belt is not fastened when the front passenger's seat is occupied. For 7 seconds after the ignition switch is placed in the ON position, the system does not activate the warning light for the front passenger.

For additional information, refer to “Seat belts” in the “Safety—Seats, seat belts and supplemental restraint system” section of this manual.

**Shift P (Park) warning light (if so equipped)**

This light blinks red and the key reminder chime sounds if the shift lever is in any position other than P (Park) and the ignition switch is in the OFF position. Return the shift lever to P (Park) with the ignition switch in the OFF position and the light will turn off. Place the ignition switch in the LOCK position and the chime will turn off. For additional information, refer to “NISSAN Intelligent Key®” in the “Pre-driving checks and adjustments” section of this manual.

---

**Supplemental air bag warning light**

When the ignition switch is placed in the ON or START position, the supplemental air bag warning light illuminates for about 7 seconds and then turns off. This means the system is operational.

If any of the following conditions occur, the front air bag, side air bag, curtain air bag, and pretensioner seat belt systems need servicing.

- The supplemental air bag warning light remains on after approximately 7 seconds.
- The supplemental air bag warning light flashes intermittently.
- The supplemental air bag warning light does not come on at all.

It is recommended that you visit a NISSAN dealer for these services. Unless checked and repaired, the supplemental restraint system (air bag system) and/or the pretensioners may not function properly. For additional information, refer to “Supplemental restraint system (SRS)” in the “Safety—Seats, seat belts and supplemental restraint system” section of this manual.

---

**WARNING**

If the supplemental air bag warning light is on, it could mean that the front air bag, side air bag, curtain air bag systems and/or pretensioner systems will not operate in an accident. To help avoid injury to yourself or others, have your vehicle checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

**INDICATOR LIGHTS**

For additional information, refer to “Vehicle information display” in this section.

**Continuously Variable Transmission (CVT) position indicator light (CVT models) (if so equipped)**

When the ignition switch is placed in the ON position, this indicator light shows the shift lever position. For additional information, refer to “Driving the vehicle” in the “Starting and driving” section of this manual.
Cruise indicator light (if so equipped)

The light comes on when the cruise control ON/OFF switch is pushed. The light goes out when the ON/OFF switch is pushed again. When the cruise indicator light comes on, the cruise control system is operational. For additional information, refer to ‘Cruise control’ in the ‘Starting and driving’ section of this manual.

ECO mode indicator light (if so equipped)

This light comes on when the ECO mode has been selected. For additional information, refer to ‘ECO mode switch’ in the ‘Starting and driving’ section of this manual.

Engine start operation indicator light (if so equipped)

For vehicles equipped with push-button ignition this indicator illuminates when the ignition switch is in the LOCK, OFF, ACC or ON position with the shift lever in the P (Park) position.

Continuously Variable Transmission (CVT) models: This indicator means that the engine will start by pushing the push-button ignition switch with the brake pedal depressed.

Manual transmission models: This indicator means that the engine will start by pushing the ignition switch with the clutch and the brake pedal depressed.

Front fog light indicator light (if so equipped)

The front fog light indicator light illuminates when the front fog lights are on. For additional information, refer to ‘Fog light switch’ in this section.

Front passenger air bag status light

The front passenger air bag status light will be lit and the passenger front air bag will be off depending on how the front passenger seat is being used.

For additional information, refer to ‘Front passenger air bag and status light’ in the ‘Safety — Seats, seat belts and supplemental restraint system’ section of this manual.

High beam indicator light (blue)

This blue light comes on when the headlight high beams are on and goes out when the low beams are selected.

The high beam indicator light also comes on when the passing signal is activated.

Malfunction Indicator Light (MIL)

If this indicator light comes on steady or blinks while the engine is running, it may indicate a potential emission control malfunction.

The MIL may also come on steady if the fuel-filler cap is loose or missing, or if the vehicle runs out of fuel. Check to make sure the fuel-filler cap is installed and closed tightly, and that the vehicle has at least 3 gallons (11.4 liters) of fuel in the fuel tank.

After a few driving trips, the light should turn off if no other potential emission control system malfunction exists.

If this indicator light comes on steady for 20 seconds and then blinks for 10 seconds when the engine is not running, it indicates that the vehicle is not ready for an emission control system inspection/maintenance.
test. For additional information, refer to "Readiness for Inspection/Maintenance (I/M) test" in the "Technical and consumer information" section of this manual.

Operation

The MIL will come on in one of two ways:

- MIL on steady — An emission control system malfunction has been detected. Check the fuel-filler cap if the Loose Fuel Cap warning appears in the vehicle information display. If the fuel-filler cap is loose or missing, tighten or install the cap and continue to drive the vehicle. The light should turn off after a few driving trips. If the light does not turn off after a few driving trips, have the vehicle inspected. It is recommended that you visit a NISSAN dealer for this service. You do not need to have your vehicle towed to the dealer.

- MIL blinking — An engine misfire has been detected which may damage the emission control system. To reduce or avoid emission control system damage:
  - do not drive at speeds above 45 mph (72 km/h).
  - avoid hard acceleration or deceleration.
  - avoid steep uphill grades.
  - if possible, reduce the amount of cargo being hauled or towed.

The MIL may stop blinking and come on steady. Have the vehicle inspected. It is recommended that you visit a NISSAN dealer for this service. You do not need to have your vehicle towed to the dealer.

**CAUTION**

Continued vehicle operation without having the emission control system checked and repaired as necessary could lead to poor driveability, reduced fuel economy, and possible damage to the emission control system.

- **Overdrive OFF indicator light (if so equipped)**

The overdrive OFF indicator light illuminates when the overdrive OFF mode is selected.

For additional information, refer to "Driving the vehicle" in the 'Starting and driving' section of this manual.

**Security indicator light**

For vehicles with Intelligent Key: This light blinks whenever the ignition switch is placed in the LOCK, OFF or ACC position.

For vehicles with Intelligent Key: This light blinks when the ignition switch is placed in the LOCK position with the key removed from the ignition switch.

The blinking security indicator light indicates that the security systems equipped on the vehicle are operational.

For additional information, refer to "Security systems" in this section.

**Side light and headlight indicator light (green)**

The side light and headlight indicator light illuminates when the side light or headlight position is selected. For additional information, refer to ‘Headlight and turn signal switch’ in this section.

**Slip indicator light**

This indicator will blink when the Vehicle Dynamic Control (VDC) system is operat-
ing, thus alerting that the vehicle is nearing its traction limits. The road surface may be slippery.

**SPORT** mode indicator light (if so equipped)

This light illuminates and then turns off when the ignition switch is placed in the ON position, and when the SPORT mode is selected.

For additional information, refer to “SPORT mode switch” in the “Starting and driving” section of this manual.

**Turn signal/hazard indicator lights**

The appropriate light flashes when the turn signal switch is activated.

Both lights flash when the hazard switch is turned on.

**Vehicle Dynamic Control (VDC) OFF indicator light**

This indicator light comes on when the VDC OFF switch is pushed to off. This indicates the VDC system has been turned off.

Push the VDC OFF switch again or restart the engine and the system will operate normally. For additional information, refer to “Vehicle Dynamic Control (VDC) system” in the “Starting and driving” section of this manual.

The VDC indicator light also comes on when you place the ignition switch in the ON position. The light will turn off after about 2 seconds if the system is operational. If the light stays on or comes on along with the indicator light while you are driving, have the VDC system checked. It is recommended that you visit a NISSAN dealer for this service.

While the VDC system is operating, you might feel a slight vibration or hear the system working when starting the vehicle or accelerating, but this is normal.

**AUDIBLE REMINDERS**

Brake pad wear warning

The disc brake pads have audible wear warnings. When a disc brake pad requires replacement, it makes a high pitched scraping sound when the vehicle is in motion, whether or not the brake pedal is depressed. Have the brakes checked as soon as possible if the warning sound is heard.

Key reminder chime

A chime sounds if the driver’s door is opened while the key is left in the ignition switch. Remove the key and take it with you when leaving the vehicle.

Light reminder chime

With the ignition switch placed in the OFF position, a chime sounds when the driver’s door is opened if the headlights or parking lights are on.

Turn the headlight control switch off before leaving the vehicle.

**NISSAN Intelligent Key® door buzzer (if so equipped)**

The Intelligent Key door buzzer sounds if any one of the following improper operations is found.

- The ignition switch is not returned to the LOCK position when locking the doors.
- The Intelligent Key is left inside the vehicle when locking the doors.
- The Intelligent Key is taken outside the vehicle when operating the vehicle.

2-22  Instruments and controls
Any doors are not closed securely when locking the doors.

When the buzzer sounds, be sure to check both the vehicle and the Intelligent Key. For additional information, refer to “NISSAN Intelligent Key®” in the “Pre-driving checks and adjustments” section of this manual.

Parking brake reminder chime

A chime sounds if the parking brake is set and the vehicle is driven. The chime will stop if the parking brake is released or the vehicle speed returns to zero.

The vehicle information display is located to the left of the speedometer. It displays such items as:

- Vehicle settings
- Trip computer information
- Drive system warnings and settings
- Cruise control system information
- NISSAN Intelligent Key® operation information
- Indicators and warnings

HOW TO USE THE VEHICLE INFORMATION DISPLAY

The vehicle information display can be changed using the , ENTER and switches located on the steering wheel.

1. — navigate through the items in the vehicle information display

2. — change or select an item in the vehicle information display

3. — go back to the previous menu
— select/enter the vehicle information display menu items or to change from one display screen to the next (i.e. trip, Fuel economy)

The ENTER and buttons also control audio and control panel functions. For additional information, refer to “Steering wheel switch for audio control” in the ‘Monitor, climate, audio, phone and voice recognition systems’ section of this manual.

STARTUP DISPLAY
When the vehicle is placed in the ON or ACC (if so equipped) position the screens that display in the vehicle information include:

- Active system status (if so equipped)
- Trip computer
- Fuel economy
- Warnings
- Outside air temperature
- Odometer/Twin Trip Odometer

Warnings will only display if there are any present. For additional information, refer to “Vehicle information display warnings and indicators” in this section.

To control what items display in the vehicle information display, refer to “Meter settings” in this section.

SETTINGS
The setting mode allows you to change the information displayed in the vehicle information display:

- Driver Assistance (if so equipped)
- Clock
- Meter Settings
- Vehicle Settings
- Maintenance
- Alarm
- Unit
- Language
- Factory Reset
Driver Assistance (if so equipped)

The driver assistance menu allows the user to change the settings for the driving aids.

Maintenance

The maintenance menu allows the user to set reminders for various vehicle maintenance items.

### WARNING

The tire replacement indicator is not a substitute for regular tire checks, including tire pressure checks. For additional information, refer to “Changing wheels and tires” in the “Do-it-yourself” section of this manual. Many factors including tire inflation, alignment, driving habits and road conditions affect tire wear and when tires should be replaced. Setting the tire replacement indicator for a certain driving distance does not mean your tires will last that long. Use the tire replacement indicator as a guide only and always perform regular tire checks. Failure to perform regular tire checks, including tire pressure checks could result in tire failure. Serious vehicle damage could occur and may lead to a collision, which could result in serious personal injury or death.

VEHICLE INFORMATION DISPLAY
WARNINGS AND INDICATORS

1. No Key Detected
2. Key ID Incorrect
3. Key Battery Low
5. Shift to Park
6. Push brake and start switch to drive (if so equipped)
7. Push clutch and start switch to drive (if so equipped)
8. Engine start operation for Intelligent Key system (if I-Key battery level is low)
9. Release Parking Brake
10. Low Fuel
11. Loose Fuel Cap
12. Low Oil Pressure: See Owner's Manual
13. Low Washer Fluid
14. Tire Pressure Low — Add Air
15. TPMS Error: See Owner's Manual
16. Door Open

17. Alarm — Time for a break?
18. Power will turn off to save the battery
19. Power turned off to save the battery
20. Reminder: Turn OFF Headlights
22. Blind Spot Warning (BSW) and Rear Cross Traffic Alert (RCTA) indicator (if so equipped)
23. BSW/RCTA System Malfunction: See Owner's Manual (if so equipped)
24. Side Radar Obstruction (if so equipped)
25. Cruise control indicator (if so equipped)
26. Intelligent Cruise Control (ICC) (if so equipped)
27. Shipping Mode On Push Storage Fuse
28. Transmission Shift Position indicator
29. CVT Error: See Owner's Manual (if so equipped)
30. Illumination indicator
31. Outside Temperature Display
32. Low Outside Temperature
33. Unavailable: Front Radar Obstruction (if so equipped)
34. ECO mode indicator (if so equipped)

**No Key Detected**
This warning appears when the Intelligent Key is left outside the vehicle with the ignition switch in the ON position. Make sure the Intelligent Key is inside the vehicle.
For additional information, refer to “NISSAN Intelligent Key®” in the “Pre-driving checks and adjustments” section of this manual.

**Key ID Incorrect**
This warning appears when the ignition switch is placed from the OFF position and the Intelligent Key is not recognized by the system. You cannot start the engine with an unregistered key.
For additional information, refer to “NISSAN Intelligent Key®” in the “Pre-driving checks and adjustments” section of this manual.

**Key Battery Low**
This indicator illuminates when the Intelligent Key battery is running out of power.
If this indicator illuminates, replace the battery with a new one. For additional information, refer to “Battery replacement” in the “Do-it-yourself” section of this manual.

**I-Key System Error: See Owner’s Manual**

After the ignition switch is pushed to the ON position, this light comes on for a period of time and then turns off.

The I-Key System Error message warns of a malfunction with the Intelligent Key system. If the light comes on while the engine is stopped, it may be impossible to start the engine.

If the light comes on while the engine is running, you can drive the vehicle. However, in these cases, have the system checked. It is recommended that you visit a NISSAN dealer for this service.

**Shift to Park**

This warning illuminates when the ignition switch is in the ACC or OFF position and the shift lever is not in the P (Park) position. Also, a chime sounds when the ignition switch is in the ACC or OFF position.

If this warning illuminates, move the shift lever to the P (Park) position and start the engine.

**Push brake and start switch to drive (if so equipped)**

This indicator appears when the shift lever is in the P (Park) position.

This indicator means that the engine will start by pushing the ignition switch with the brake pedal depressed. You can start the engine from any position of the ignition switch.

**Push clutch and start switch to drive (if so equipped)**

This indicator appears when the shift lever is in the N (Neutral) position.

This indicator means that the engine will start by pushing the ignition switch with the clutch and brake pedal depressed. You can start the engine from any position of the ignition switch.

**Engine start operation for Intelligent Key system (if I-Key battery level is low)**

This indicator appears when the battery of the Intelligent Key is low and when the Intelligent Key system and the vehicle are not communicating normally.

If this appears, touch the ignition switch with the Intelligent Key while depressing the brake pedal. For additional information, refer to “NISSAN Intelligent Key® battery discharge” in the “Starting and driving” section of this manual.

**Release Parking Brake**

This warning illuminates in the message area of the vehicle information display when the parking brake is set and the vehicle is driven.

**Low Fuel**

This warning illuminates when the fuel level in the fuel tank is getting low. Refuel as soon as it is convenient, preferably before the fuel gauge reaches 0 (Empty). There will be a small reserve of fuel in the tank when the fuel gauge needle reaches 0 (Empty).

**Loose Fuel Cap**

This warning appears when the fuel-filler cap is not tightened correctly after the vehicle has been refueled. For additional information, refer to “Fuel-filler cap” in the “Pre-driving checks and adjustments” section of this manual.

**Low Oil Pressure: See Owner’s Manual**

This warning appears in the message area of the vehicle information display if low oil pressure is detected. This gauge is not de-
signed to indicate low oil level. **The low oil pressure warning is not designed to indicate a low oil level.** Use the dipstick to check the oil level. For additional information, refer to “Engine oil” in the “Do-it-yourself” section of this manual.

**Low Washer Fluid**

This warning illuminates when the windshield-washer fluid is at a low level. Add windshield-washer fluid as necessary. For additional information, refer to “Windshield-washer fluid” in the “Do-it-yourself” section of this manual.

**Tire Pressure Low – Add Air**

This warning appears when the low tire pressure warning light in the meter illuminates and low tire pressure is detected. The warning appears each time the ignition switch is placed in the ON position as long as the low tire pressure warning light remains illuminated. If this warning appears, stop the vehicle and adjust the tire pressures of all four tires to the recommended COLD tire pressure shown on the Tire and Loading Information label. For additional information, refer to “Low tire pressure warning light” in this section and “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section of this manual.

**TPMS Error: See Owner’s Manual**

This warning appears when there is an error with your TPMS. If this warning comes on, have the system checked. It is recommended that you visit a NISSAN dealer for this service.

**Door Open**

This warning illuminates when a door has been opened.

**Alarm – Time for a driver break?**

This indicator appears when the driver enables the timer alert function within the driver assistance settings and the selected set time is expired. The time is based on ignition on time and can be set up to six hours.

**Power will turn off to save the battery**

This message appears in the vehicle information display after a period of time if the ignition switch is in the ACC or the ON position and if the vehicle is in P (Park). For additional information, refer to “Push-button ignition switch positions” in the “Starting and driving” section of this manual.

**Power turned off to save the battery**

This message appears after the ignition switch is automatically turned off. For additional information, refer to “Push-button ignition switch positions” in the “Starting and driving” section of this manual.

**Reminder: Turn OFF Headlights**

This warning appears when the headlights are left in the ON position when exiting the vehicle. Place the headlight switch in the OFF or AUTO position. For additional information, refer to “Headlight and turn signal switch” in this section.

**Headlight System Error: See Owner’s Manual (if so equipped)**

This warning appears when the LED headlights are not functioning properly. If this warning appears, have your system checked. It is recommended that you visit a NISSAN dealer for this service.
Blind Spot Warning (BSW) and Rear Cross Traffic Alert (RCTA) indicator (if so equipped)

This indicator shows when the BSW and RCTA systems are engaged.

For additional information, refer to “Blind Spot Warning (BSW)” and “Rear Cross Traffic Alert (RCTA)” in the “Starting and driving” section of this manual.

BSW/RCTA System Malfunction: See Owner’s Manual (if so equipped)

This warning appears when the Blind Spot Warning/Rear Cross Traffic Alert systems are not functioning properly. For additional information, refer to “Blind Spot Warning (BSW)” and “Rear Cross Traffic Alert (RCTA)” in the “Starting and driving” section of this manual.

Side Radar Obstruction (if so equipped)

This message appears when the Blind Spot Warning/Rear Cross Traffic Alert systems become unavailable because a radar blockage is detected. For additional information, refer to “Blind Spot Warning (BSW)” or “Rear Cross Traffic Alert (RCTA)” in the “Starting and driving” section of this manual.

Cruise control indicator (if so equipped)

This indicator shows the cruise control system status.

When cruise control is activated, a green circle will illuminate to indicate it is set. The vehicle information display will also display the speed the cruise control was set at. If you accelerate past the set speed, the speed will blink until you either cancel cruise control or go back to the set speed. If cruise control is on and canceled, the speed will be displayed to show the speed the vehicle will return to if the resume button is activated.

Intelligent Cruise Control (ICC) indicator (if so equipped)

This indicator shows the Intelligent Cruise Control (ICC) system status. The status is shown by the color. For additional information, refer to “Intelligent Cruise Control (ICC)” in the “Starting and driving” section of this manual.

Shipping Mode On Push Storage Fuse

This warning may appear if the extended storage switch is not pushed in. When this warning appears, push in the extended storage switch to turn off the warning. For additional information, refer to “Fuses” in the “Do-it-yourself” section of this manual.

Transmission Shift Position indicator

This indicator shows the transmission shift position.

CVT Error: See Owner’s Manual (if so equipped)

This warning illuminates when there is a problem with the CVT system. If this warning comes on, have the system checked. It is recommended that you visit a NISSAN dealer for this service.

Illumination indicator

This indicator appears when the vehicle information display screen brightness is being adjusted.

Outside Temperature Display

The outside temperature display appears in the center region of the vehicle information display.

Low Outside Temperature

This warning appears if the outside temperature is below 37°F (3°C). The temperature can be changed to display in Celsius or Fahrenheit. For additional information, refer to “Settings” in this section.

Instruments and controls 2-35
Unavailable: Front Radar Obstruction (if so equipped)
This warning appears when the Intelligent Cruise Control (ICC) system or the Automatic Emergency Braking (AEB) system becomes unavailable because the front radar is obstructed. For additional information, refer to “Intelligent Cruise Control (ICC)” or “Automatic Emergency Braking (AEB)” in the “Starting and driving” section of this manual.

ECO mode indicator (if so equipped)
This indicator shows when the ECO mode is engaged.

For additional information, refer to ‘ECO mode’ in the “Starting and driving” section of this manual.

Your vehicle may have two types of security systems:

- Vehicle security system (if so equipped)
- NISSAN Vehicle Immobilizer System

VEHICLE SECURITY SYSTEM (if so equipped)

The vehicle security system provides visual and audible alarm signals if someone opens the doors when the system is armed. It is not, however, a motion detection type system that activates when a vehicle is moved or when a vibration occurs.

The system helps detect vehicle theft but cannot prevent it, nor can it prevent the theft of interior or exterior vehicle components in all situations. Always secure your vehicle even if parking for a brief period. Never leave your keys in the ignition, and always lock the vehicle when unattended. Be aware of your surroundings, and park in secure, well-lit areas whenever possible.

Many devices offering additional protection, such as component locks, identification markers, and tracking systems, are available at auto supply stores and specialty shops. A NISSAN dealer may also offer such equipment. Check with your insurance company to see if you may be eligible for discounts for various theft protection features.

How to arm the vehicle security system

1. Close all windows. (The system can be armed even if the windows are open.)
2. Place the ignition switch in the LOCK position and remove the key.
3. Close all doors. Lock all doors. The doors can be locked with:
• the power door lock switch (if the door is opened, locked and then closed).
• the key — master or mechanical (Intelligent Key models).
• any request switch (Intelligent Key models).
• the key fob or Intelligent Key.

Key fob and Intelligent Key operation:
• Press the \[\text{button}\] All doors lock. The hazard lights flash twice and the horn beeps once to indicate all doors are locked.
• When the \[\text{button}\] is pressed with all doors locked, the hazard lights flash twice and the horn beeps once as a reminder that the doors are already locked.

The horn may or may not beep. For additional information, refer to ‘Silencing the horn beep feature’ in the ‘Pre-driving checks and adjustments’ section in this manual.

4. Confirm that the \[\text{indicator light}\] comes on. The \[\text{light}\] stays on for about 30 seconds. The vehicle security system is now pre-armed. After about 30 seconds the vehicle security system automatically shifts into the armed phase. The \[\text{light}\] begins to flash once every 3 seconds. If, during the 30-second pre-arm time period, the driver’s door is unlocked by the key, a request switch, the key fob or Intelligent Key, or if the ignition switch is placed in the ACC or ON position, the system will not arm.

• If the key is turned slowly when locking the driver’s door, the system may not arm. Furthermore, if the key is turned beyond the vertical position toward the unlock position to remove the key, the system may be disarmed when the key is removed. If the indicator light fails to glow for a period of time, unlock the door once and lock it again.

• Even when the driver and/or passengers are in the vehicle, the system will arm with all doors closed and locked with the ignition switch placed in the OFF position.

Vehicle security system activation
The vehicle security system will give the following alarm:
• The headlights blink and the horn sounds intermittently.
• The alarm automatically turns off after a period of time. However, the alarm reactivates if the vehicle is tampered with again. The alarm can be shut off by unlocking the driver’s door with the key, a request switch, by pressing the \[\text{button}\] on the key fob or Intelligent Key or placing the ignition switch in the ON or ACC position.

The alarm is activated by:
• opening a door without using the key, a request switch, key fob or Intelligent Key (even if the door is unlocked by using the inside lock knob or the power door lock switch).

How to stop an activated alarm
The alarm stops only by unlocking the driver’s door by pressing the \[\text{button}\] on the key fob or Intelligent Key, or by unlocking all doors with any request switch (Intelligent Key models) or placing the ignition switch in the ON or ACC position.
NISSAN VEHICLE IMMOBILIZER SYSTEM

The NISSAN Vehicle Immobilizer System will not allow the engine to start without the use of a registered key.

If the engine fails to start using a registered key (for example, when interference is caused by another registered key, an automated toll road device or automatic payment device on the key ring), restart the engine using the following procedures:

1. Leave the ignition switch in the ON position for approximately 5 seconds.
2. Place the ignition switch in the OFF or LOCK position and wait approximately 10 seconds.
3. Repeat steps 1 and 2.
4. Restart the engine while holding the device (which may have caused the interference) separate from the registered key.

If the no start condition re-occurs, NISSAN recommends placing the registered key on a separate key ring to avoid interference from other devices.

Never leave these keys in the vehicle.

FCC Notice:

For USA:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For Canada:
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference received, including interference that may cause undesired operation of the device.

Security indicator light

For vehicles without Intelligent Key: This light blinks whenever the ignition switch is placed in the LOCK, OFF or ACC position.

For vehicles with Intelligent Key: This light blinks when the ignition switch is placed in the LOCK position with the key removed from the ignition switch.

This function indicates the NISSAN Vehicle Immobilizer System is operational.
If the NISSAN Vehicle Immobilizer System is malfunctioning, the light will remain on while the ignition switch is placed in the ON position.

If the light still remains on and/or the engine will not start, it is recommended that you visit a NISSAN dealer for NISSAN Vehicle Immobilizer System service as soon as possible. Please bring all registered keys that you have when visiting a NISSAN dealer for service.

**SWITCH OPERATION**

**WARNING**

In freezing temperatures the washer solution may freeze on the windshield and obscure your vision which may lead to an accident. Warm the windshield with the defroster before you wash the windshield.

**CAUTION**

- Do not operate the washer continuously for more than 30 seconds.
- Do not operate the washer if the windshield-washer fluid reservoir is empty.
- Do not fill the windshield-washer fluid reservoir with windshield-washer fluid concentrates at full strength. Some methyl alcohol based windshield-washer fluid concentrates may permanently stain the grille if spilled while filling the windshield-washer fluid reservoir.
- Pre-mix windshield-washer fluid concentrates with water to the manufacturer’s recommended levels before pouring the fluid into the windshield-washer fluid reservoir. Do not use the windshield-washer fluid reservoir to mix the windshield-washer fluid concentrate and water.
NOTE:
If the windshield wiper operation is inter-
terrupted by snow or ice, the wiper may stop moving to protect its motor. If this occurs, turn the wiper switch to the OFF position and remove the snow or ice that is on and around the wiper arms. In approximately 1 minute, turn the switch on again to operate the wiper.

The windshield wiper and washer operates when the ignition switch is placed in the ON position.

Push the lever down to operate the wiper at the following speed:

1. Intermittent (INT) — intermittent operation can be adjusted by turning the knob toward A (faster) or B (slower). Also, the intermittent operation speed varies in accordance with the vehicle speed (if so equipped). (For example, when the vehicle speed is high, the intermittent speed will be faster.)
2. Low (LO) — continuous low speed operation
3. High (HI) — continuous high speed operation

Push the lever up 4 to have one sweep operation (MIST) of the wiper.

Pull the lever toward you 5 to operate the washer. The wiper will also operate several times.

After a short delay the drip wipe function will operate the wiper once more to clear remaining windshield-washer fluid from the windshield.

NOTE:
The Wiper with Speed feature may be disabled. For additional information, refer to “Vehicle information display” in this section.

To defrost the rear window glass and outside mirror (if so equipped), start the engine and push the rear window defroster switch on. The rear window defroster indicator light on the switch comes on. Push the switch again to turn the defroster off.

The rear window defroster automatically turns off after approximately 15 minutes.

CAUTION
When cleaning the inner side of the rear window, be careful not to scratch or damage the rear window defroster.
HEADLIGHT CONTROL SWITCH

Lighting

1. Rotate the switch to the \( \text{\textbullet} \) position, and the front parking, tail, license plate, and instrument panel lights will come on.

2. Rotate the switch to the \( \text{\textbullet} \) position, and the headlights will come on and all the other lights remain on.

CAUTION

Use the headlights with the engine running to avoid discharging the vehicle battery.
Autolight system (if so equipped)
The autolight system allows the headlights to be set so they turn on and off automatically. The autolight system can:

- Turn on the headlights, front parking, tail, license plate and instrument panel lights automatically when it is dark.
- Turn off all the lights when it is light.
- Keep all the lights on a period of time after you place the ignition switch in the OFF position and all doors are closed.

NOTE:
Autolight activation sensitivity is adjustable for vehicles with navigation system. For additional information, refer to "Vehicle settings" in this section.

To turn on the autolight system:
1. Place the headlight switch in the AUTO position.
2. Place the ignition switch in the ON position.
3. The autolight system automatically turns the headlights on and off.

Initially, if the ignition switch is placed in the OFF position and a door is opened and left open, the headlights remain on for a period of time. If another door is opened while the headlights are on, then the timer is reset.

To turn the autolight system off, place the switch in the OFF, or position.
Be sure you do not put anything on top of the autolight sensor located in the top side ① of the instrument panel. The autolight sensor controls the autolight; if it is covered, the autolight sensor reacts as if it is dark out and the headlights will illuminate. If this occurs while parked with the engine off and the ignition switch placed in the ON position, your vehicle’s battery could become discharged.

Headlight beam select

1. To select the high beam function, ensure the low beams are engaged, and push the lever forward. The high beam lights come on and the blue ⬇ indicator light illuminates.
2. Pull the lever back to return to the low beam.
3. Pulling and releasing the lever flashes the headlight high and low beams on and off. The low beams need not be engaged for this function.

Battery saver system

The battery saver system automatically turns off the ignition after a period of time when the ignition switch is left in the ACC or ON position.

The battery saver system automatically turns off the following lights after a period of time when the ignition switch is placed in the OFF position and the doors are closed:

- Headlights, when the headlight switch is in the 🧧 or 🍯 position
- Interior lights, when left in the ON position

⚠️ CAUTION

Even though the battery saver feature automatically turns off the headlights after a period of time, you should turn the headlight switch to the OFF position when the engine is not running to avoid discharging the vehicle battery.
DAYTIME RUNNING LIGHTS (DRL) SYSTEM (Type A) (if so equipped)

The headlights automatically illuminate at 100% intensity (low beam is used for the Daytime Running Lights (DRL) system) when the engine is started with the parking brake released. The DRL operate with the headlight switch in the OFF position. When the DRL system is active, the clearance lights, tail lights, front side marker lights, and rear side marker lights are off. To turn the DRL system off, turn the switch to the position.

When the headlight switch is placed in the position for full illumination when driving at night there will be no difference in the low beam intensity.

If the parking brake is applied before the engine is started, the DRL do not illuminate. The DRL illuminate once the parking brake is released. The DRL will remain on until the ignition switch is placed in the OFF position.

It is necessary at dusk to turn the headlight switch on for interior controls and switches to illuminate, as those remain off while the switch is in the OFF position.

DAYTIME RUNNING LIGHTS (DRL) SYSTEM (Type B) (if so equipped)

The headlights automatically illuminate at 100% intensity (low beam is used for the Daytime Running Lights (DRL) system) when the engine is started and the parking brake released. The DRL operate with the headlight switch in the OFF position. When the DRL system is active, the clearance lights, tail lights, front side marker lights, and rear side marker lights are off. To turn the DRL system off, turn the switch to the position.

If the parking brake is applied before the engine is started, the DRL do not illuminate. The DRL illuminate when the parking brake is released. The DRL will remain on until the ignition switch is placed in the OFF position.

It is necessary at dusk to turn the headlight switch on for interior controls and switches to illuminate, as those remain off while the switch is in the OFF position.

LED DAYTIME RUNNING LIGHTS (DRL) SYSTEM (Type C — NISMO) (if so equipped)

The LED Daytime Running Lights (DRL) automatically illuminate at 100% intensity when the engine is started and the parking brake released. The LED DRL operate with the headlight switch in the OFF position. To turn off the LED DRL system, turn the headlight switch to the position.

If the parking brake is applied before the engine is started, the LED DRL do not illuminate. The LED DRL illuminate when the parking brake is released. The LED DRL will remain on until the ignition switch is placed in the OFF position.

It is necessary at dusk to turn the headlight switch on for interior controls and switches to illuminate, as those remain off while the switch is in the OFF position.

**WARNING**

When the LED DRL system is active, tail lights on your vehicle are not on. It is necessary at dusk to turn on your head lights. Failure to do so could cause an accident injuring yourself and others.

---

**INSTRUMENT BRIGHTNESS CONTROL**

Press the “+” button A to increase the brightness of instrument panel lights.

Press the “-” button B to decrease the brightness of instrument panel lights.

---

**TURN SIGNAL SWITCH**

**Turn signal**

1. Move the lever up or down to signal the turning direction. When the turn is completed, the turn signal cancels automatically.

**Lane change signal**

2. Move the lever up or down until the turn signal begins to flash, but the lever does not latch, to signal a lane change. Hold the lever until the lane change is completed.

---

*Instruments and controls* 2-45
Move the lever up or down until the turn signal begins to flash, but the lever does not latch, and release the lever. The turn signal will automatically flash three times.

Choose the appropriate method to signal a lane change based on road and traffic conditions.

**NOTE:**
If the turn signal light bulb malfunctions, the turn signal indicator will flash at a higher frequency when the turn signal is activated.

**FOG LIGHT SWITCH (if so equipped)**
To turn the fog lights on, turn the headlight switch to the position, then turn the fog light switch to the position.
To turn the fog lights off with the headlight switch in the AUTO position, the headlights must be on, then turn the fog light switch to the position.
To turn the fog lights off, turn the fog light switch to the OFF position.

The headlights must be on and the low beams selected for the fog lights to operate. The fog lights automatically turn off when the high beam headlights are selected.
WARNING
Do not disassemble the horn. Doing so could affect proper operation of the supplemental front air bag system. Tampering with the supplemental front air bag system may result in serious personal injury.

Type A (if so equipped)

Type B (if so equipped)

To sound the horn, push near the horn icon on the steering wheel.

HEATED SEAT SWITCHES (if so equipped)

WARNING
Do not use or allow occupants to use the seat heater if you or the occupants cannot monitor elevated seat temperatures or have an inability to feel pain in body parts that contact the seat. Use of the seat heater by such people could result in serious injury.
The front seats are warmed by built-in heaters.

1. Start the engine.
2. Push the LO or HI position of the switch, as desired. The indicator light in the switch will illuminate.
   The heater is controlled by a thermostat, automatically turning the heater on and off. The indicator light will remain on as long as the switch is on.
3. When the seat is warmed or before you leave the vehicle, be sure to turn the switch off.

The vehicle should be driven with the VDC system on for most driving conditions.
If the vehicle is stuck in mud or snow, the VDC system reduces the engine output to reduce wheel spin. The engine speed will be reduced even if the accelerator is depressed to the floor. If maximum engine power is needed to free a stuck vehicle, turn the VDC system off.
To turn off the VDC system, push the VDC OFF switch. The indicator will come on.
Push the VDC OFF switch again or restart the engine to turn on the system. For additional information, refer to "Vehicle Dynamic Control (VDC) system" in the ‘Starting and driving’ section of this manual.

The E-call (SOS) switch is used in combination with a NissanConnect® Services subscription to call for assistance in case of an emergency. Pushing the switch will (with a paid subscription) reach a response specialist that will provide assistance based on the situation described by the vehicle’s occupant. For additional information, or to enroll your vehicle, refer to www.NissanUSA.com/connect or call 855–426–6628.

The power outlet is for powering electrical accessories such as cellular telephones. It is rated at 12 volt, 120W (10A) maximum. The power outlet is powered only when the ignition switch is in the ACC or ON position.
CAUTION

• The outlet and plug may be hot during or immediately after use.

• Only certain power outlets are designed for use with a cigarette lighter unit. Do not use any other power outlet for an accessory lighter. It is recommended that you visit a NISSAN dealer for additional information.

• Do not use with accessories that exceed a 12 volt, 120W (10A) power draw.

• Do not use double adapters or more than one electrical accessory.

• Use power outlets with the engine running to avoid discharging the vehicle battery.

• Avoid using power outlets when the air conditioner, headlights or rear window defroster is on.

• Before inserting or disconnecting a plug, be sure the electrical accessory being used is turned off.

• Push the plug in as far as it will go. If good contact is not made, the plug may overheat or the internal temperature fuse may open.

• When not in use, be sure to close the cap. Do not allow water or any other liquid to contact the outlet.
CONSOLE SIDE POCKETS (if so equipped)

SEATBACK POCKETS (if so equipped)

The seatback pockets are located on the back of the driver’s (if so equipped) and passenger’s seats. The pockets can be used to store maps.

WARNING

To ensure proper operation of the passenger’s NISSAN Advanced Air Bag System, please observe the following items:

• Do not allow a passenger in the rear seat to push or pull on the seatback pocket or head restraint/headrest.

• Do not place heavy loads heavier than 9.1 lbs. (4 kg) on the seatback, head restraint/headrest, storage pouch (if so equipped), or in the seatback pocket.
STORAGE POUCH (if so equipped)

A storage pouch may be located on the front of the driver’s and/or passenger’s seats.

**WARNING**

- Do not store angular, sharp, heavy objects or objects that cannot fully fit inside the pouch because they might increase the likelihood of an injury in a crash.

To ensure proper operation of the passenger’s NISSAN Advanced Air Bag System, please observe the following items:

- Do not place loads heavier than 0.55 lbs. (0.25 kg) on the cushion storage pouch.
- Do not place a combined weight exceeding 2.2 lbs. (1 kg) on the seatback, head restraint, seatback pocket (if so equipped) and storage pouch at the same time.

STORAGE TRAYS

**WARNING**

Do not place sharp objects in the trays to help prevent injury in an accident or sudden stop.

2-52 Instruments and controls
GLOVE BOX
Open the glove box by pulling the handle.

WARNING
Keep glove box lid closed while driving to help prevent injury in an accident or a sudden stop.

CONSOLE BOX
To open the console box, press in on the lever ₁ and raise the lid ₂.
To close, push the lid down until the lock latches.

Instruments and controls  2-53
SLIDE FRONT ARMREST (if so equipped)

To adjust the front armrest, push or pull the console cover to slide it to the front or rear as desired.

OVERHEAD SUNGLASSES STORAGE

To open the sunglasses holder, push and release.

Only store one pair of sunglasses in the holder.

⚠️ WARNING

Keep the sunglasses holder closed while driving to avoid obstructing the driver's view and to help prevent an accident.

⚠️ CAUTION

- Do not use for anything other than sunglasses.
- Do not leave sunglasses in the sunglasses holder while parking in direct sunlight. The heat may damage the sunglasses.
CUP HOLDERS

**WARNING**
Avoid abrupt starting and braking when the cup holder is being used to prevent spilling the drink. If the liquid is hot, it can scald you or your passenger.

**CAUTION**
Use only soft cups in the cup holder. Hard objects can injure you in an accident.

**CAUTION**
- Do not use bottle holder for any other objects that could be thrown about in the vehicle and possibly injure people during sudden braking or an accident.
- Do not use bottle holder for open liquid containers.

Instruments and controls 2-55
WARNING

- Make sure that all passengers have their hands, etc., inside the vehicle while it is in motion and before closing the windows. Use the window lock switch to prevent unexpected use of the power windows.
- To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, including entrapment in windows or inadvertent door lock activation, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

The power windows operate when the ignition switch is placed in the ON position, or for a period of time after the ignition switch is placed in the OFF position. If the driver’s or passenger’s door is opened during this period of time, the power to the windows is canceled.

Driver’s side power window switch

1. Window lock button
2. Power door lock switch
3. Front passenger side switch
4. Right rear passenger side
5. Left rear passenger side
6. Driver side automatic switch

The driver’s side control panel is equipped with switches to open or close all of the windows.
To open a window, push the switch and continue to hold it down until the desired window position is reached. To close a window, pull the switch and continue to hold it up until the desired window position is reached.

Locking passengers’ windows
When the window lock switch is depressed, only the driver’s side window can be opened or closed. Push it again to cancel the window lock function.

Front passenger’s power window switch
The passenger’s window switch operates only the corresponding passenger’s window. To open the window, push the switch and continue to hold it down until the desired window position is reached \( \text{①} \). To close the window, pull the switch and continue to hold it up until the desired window position is reached \( \text{②} \).

Rear power window switch
The rear power window switches open or close only the corresponding windows. To open the window, push the switch and hold it down \( \text{①} \). To close the window, pull the switch up \( \text{②} \).
Automatic operation

To fully open a window equipped with automatic operation, push the window switch down to the second detent and release it; it need not be held. The window automatically opens all the way. To stop the window, lift the switch up while the window is opening.

To fully close a window equipped with automatic operation, pull the switch up to the second detent and release it; it need not be held. The window automatically closes all the way. To stop the window, push the switch down while the window is closing.

Auto-reverse function

The auto-reverse function can be activated when a window is closed by automatic operation.

Depending on the environment or driving conditions, the auto-reverse function may be activated if an impact or load similar to something being caught in the window occurs.

WARNING

There are some small distances immediately before the closed position which cannot be detected. Make sure that all passengers have their hands, etc., inside the vehicle before closing the window.

If the vehicle’s battery is disconnected, replaced, or jump started, the power window auto-reverse function may not operate properly. Have the power window auto-reverse system re-initialized. It is recommended that you visit a NISSAN dealer for this service.

If the control unit detects something caught in a window equipped with automatic operation as it is closing, the window will be immediately lowered.

When power window switch does not operate

If the power window automatic function (closing only) does not operate properly, perform the following procedure to initialize the power window system:

1. Place the ignition switch in the ON position.
2. Open the window more than halfway by operating the power window switch.
3. Pull the power window switch and hold it to close the window, and then hold the switch more than 3 seconds after the window is closed.
4. Release the power window switch. Operate the window by the automatic function to confirm the initialization is complete. The power window automatically opens or closes depending on if the automatic down or up function is selected.
5. Perform steps 2 through 4 above for other windows.

If the power window function does not operate properly after performing the above procedure have the system checked and repaired. It is recommended that you visit a NISSAN dealer for this service.
POWER MOONROOF

The moonroof will only operate when the ignition switch is placed in the ON position. The power moonroof is operational for a period of time, even if the ignition switch is placed in the ACC or OFF position. If the driver’s door or the front passenger’s door is opened during this period of time, the power to the moonroof is canceled.

Sliding the moonroof

To fully open or close the moonroof, push the switch to the open ② or close ① position and release it; it need not be held. The roof will automatically open or close all the way. To stop the roof, push the switch once more while it is opening or closing.

Tilting the moonroof

To tilt up, first close the moonroof, then push the switch to the tilt up position ① and release it; it need not be held. To tilt down the moonroof, push the switch to the tilt down position ②.

Resetting the moonroof switch

If the moonroof does not operate properly, perform the following procedure to initialize the moonroof operation system.

1. If the moonroof is open, close it fully by repeatedly pushing the moonroof switch to the close position ① to tilt the moonroof up.
2. Push and hold the switch to the close position ①.
3. Release the moonroof switch after the moonroof moves slightly up and down.
4. Push and hold the switch to the open position ② to fully tilt the moonroof down.
5. Check if the moonroof switch operates normally.

If the moonroof does not operate properly after performing the procedure above, have your vehicle serviced. It is recommended that you visit a NISSAN dealer for this service.

Auto-reverse function (when closing or tilting down the moonroof)

The auto-reverse function can be activated when the moonroof is closed or tilted down by automatic operation when the ignition switch is placed in the ON position or for a period of time after the ignition switch is placed in the OFF position. Depending on the environment or driving conditions, the auto-reverse function may be activated if an impact or load similar to something being caught in the moonroof occurs.

WARNING

There are some small distances immediately before the closed position which cannot be detected. Make sure that all passengers have their hands, etc., inside the vehicle before closing the moonroof.
When closing

If the control unit detects something caught in the moonroof as it moves to the front, the moonroof will immediately open backward.

When tilting down

If the control unit detects something caught in the moonroof as it tilts down, the moonroof will immediately tilt up.

If the auto-reverse function malfunctions and repeats opening or tilting up the moonroof, keep pushing the tilt down switch within 5 seconds after it happens; the moonroof will fully close gradually. Make sure nothing is caught in the moonroof.

**WARNING**

- In an accident you could be thrown from the vehicle through an open moonroof. Always use seat belts and child restraints.
- Do not allow anyone to stand up or extend any portion of their body out of the moonroof opening while the vehicle is in motion or while the moonroof is closing.

**CAUTION**

- Remove water drops, snow, ice or sand from the moonroof before opening.
- Do not place heavy objects on the moonroof or surrounding area.

Sunshade

Open and close the sunshade by sliding it forward or backward.

If the moonroof does not close

Have your moonroof checked and repaired. It is recommended that you visit a NISSAN dealer for this service.

**INTERIOR LIGHTS**

1. The interior light can be turned on regardless of door position. The light will go off after a period of time unless the ignition switch is placed in the ON position when any door is opened.

2. The interior lights can be set to operate when the doors are opened. To turn off the interior lights when a door is open, push the switch; the interior lights will not illuminate, regardless of door position. The lights will go off when the ignition switch is placed in the ON position or the driver’s door is closed and locked. The lights will also go off after a period of time when the doors are open.

2-60 Instruments and controls
NOTE:
The step lights (if so equipped) illuminate when the driver and passenger doors are opened regardless of the interior light switch position. These lights will turn off automatically after a period of time while doors are open to prevent the battery from becoming discharged.

CAUTION
Do not use for extended periods of time with the engine stopped. This could result in a discharged battery.

CONSOLE LIGHT (if so equipped)
The console light will turn on whenever the parking lights or headlights are illuminated.

MAP LIGHTS
To turn the map lights on, push the switches. To turn them off, push the switches again.

CAUTION
Do not use for extended periods of time with the engine stopped. This could result in a discharged battery.
The interior light has a three-position switch and operates regardless of ignition switch position.

When the switch is in the ON position \( 1 \), the interior lights illuminate, regardless of door position. The lights will go off after a period of time unless the ignition switch is placed in the ACC or ON position.

When the switch is in the DOOR position \( 2 \), the interior lights will stay on for a period of time when:

- The doors are unlocked by the key fob, a key, or the power door lock switch, while all doors are closed and the ignition switch is placed in the OFF position.
- The driver’s door is opened and then closed while the key is removed from the ignition switch.
- The key is removed from the ignition switch while all doors are closed.

The lights will turn off while the timer is activated when:

- The driver’s door is locked by the key fob, a key, or the power door lock switch.
- The ignition switch is placed in the ON position.

When the switch is in the OFF position \( 3 \), the interior lights do not illuminate, regardless of door position.

The lights will turn off automatically after a period of time while doors are open to prevent the battery from becoming discharged.

**CAUTION**

Do not use for extended periods of time with the engine stopped. This could result in a discharged battery.
TRUNK LIGHT

The light illuminates when the trunk lid is opened. When the trunk lid is closed, the light goes off.

The light will go off after a period of time if the trunk lid is left open, unless the ignition switch is placed in the ON position.

For additional information, refer to “Exterior and interior lights” in the “Do-it-yourself” section of this manual.

HOMELINK® UNIVERSAL TRANSCEIVER (if so equipped)

The HomeLink® Universal Transceiver provides a convenient way to consolidate the functions of up to three individual handheld transmitters into one built-in device.

HomeLink® Universal Transceiver:

- Will operate most radio frequency devices such as garage doors, gates, home and office lighting, entry door locks and security systems.
- Is powered by your vehicle’s battery. No separate batteries are required. If the vehicle’s battery is discharged or is disconnected, HomeLink® will retain all programming.

When the HomeLink® Universal Transceiver is programmed, retain the original transmitter for future programming procedures (Example: new vehicle purchases). Upon sale of the vehicle, the programmed HomeLink® Universal Transceiver buttons should be erased for security purposes. For additional information, refer to “Programming HomeLink®” in this section.

WARNING

- Do not use the HomeLink® Universal Transceiver with any garage door opener that lacks safety stop and reverse features as required by federal safety standards. (These standards became effective for opener models manufactured after April 1, 1982). A garage door opener which cannot detect an object in the path of a closing garage door and then automatically stop and reverse, does not meet current federal safety standards. Using a garage door opener without these features increases the risk of serious injury or death.
- During the programming procedure your garage door or security gate will open and close (if the transmitter is within range). Make sure that people or objects are clear of the garage door, gate, etc. that you are programming.
Your vehicle’s engine should be turned off while programming the HomeLink® Universal Transceiver. Do not breathe exhaust gases; they contain colorless and odorless carbon monoxide. Carbon monoxide is dangerous. It can cause unconsciousness or death.

PROGRAMMING HOMELINK®

If you have any questions or are having difficulty programming your HomeLink® buttons, refer to the HomeLink® website at: www.homelink.com or call 1-800-355-3515.

NOTE:
Place the ignition switch in the ACC position when programming HomeLink®. It is also recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink® for quicker programming and accurate transmission of the radio frequency.

1. Position the end of your hand-held transmitter 1–3 in (2–8 cm) away from the HomeLink® surface, keeping the HomeLink® indicator light in view.

2. Using both hands, simultaneously press and hold the desired HomeLink® button and hand-held transmitter button. DO NOT release until the HomeLink® indicator light flashes slowly and then rapidly. When the indicator light flashes rapidly, both buttons may be released. (The rapid flashing indicates successful programming.)
3. Press and hold the programmed HomeLink® button and observe the indicator light.
   - If the indicator light is solid/continuous, programming is complete and your device should activate when the HomeLink® button is pressed and released.
   - If the indicator light blinks rapidly for 2 seconds and then turns to a solid/continuous light, continue with Steps 4-6 for a rolling code device. A second person may make the following steps easier. Use a ladder or other device. Do not stand on your vehicle to perform the next steps.

4. At the receiver located on the garage door opener motor in the garage, locate the ‘learn’ or ‘smart’ button (the name and color of the button may vary by manufacturer but it is usually located near where the hanging antenna wire is attached to the unit). If there is difficulty locating the button, reference the garage door opener’s manual.

5. Press and release the ‘learn’ or ‘smart’ button.

6. Return to the vehicle and firmly press and hold the trained HomeLink® button for 2 seconds and release. Repeat the ‘press/hold/release’ sequence up to three times to complete the training process. HomeLink® should now activate your rolling code equipped device.

7. If you have any questions or are having difficulty programming your HomeLink® buttons, refer to the HomeLink® web site at: www.homelink.com or call 1-800-355-3515.

NOTE:

Some devices may require you to replace Step 2 with the cycling procedure noted in “Programming HomeLink® for Canadian customers and gate openers” in this section.

Canadian radio-frequency laws require transmitter signals to ‘time-out’ (or quit) after several seconds of transmission – which may not be long enough for HomeLink® to pick up the signal during training. Similar to this Canadian law, some U.S. gate operators are designed to ‘time-out’ in the same manner.

If you live in Canada or you are having difficulties training a gate operator or garage door opener by using the “Training” procedures, replace “Programming HomeLink®” Step 2 with the following:

NOTE:

When programming a garage door opener, etc., unplug the device during the “cycling” process to prevent possible damage to the garage door opener components.

1. For additional information, refer to “Programming HomeLink®” step 1 in this section.

2. Using both hands, simultaneously press and hold the desired HomeLink® button and the hand-held transmitter button. During training, your hand-held transmitter may automatically stop transmitting. Continue to press and hold the desired HomeLink® button while you press and re-press (“cycle”) your hand-held transmitter every 2 seconds until the frequency signal has been learned. The HomeLink® indicator light will flash slowly and then

Instruments and controls 2-65
rapidly after several seconds upon successful training. DO NOT release until the HomeLink® indicator light flashes slowly and then rapidly. When the indicator light flashes rapidly, both buttons may be released. The rapid flashing indicates successful training. Proceed with “Programming HomeLink®” step 3 to complete.

If the device was unplugged during the programming procedure, remember to plug it back in when programming is completed.

OPERATING THE HOMELINK® UNIVERSAL TRANSCEIVER

The HomeLink® Universal Transceiver, after it is programmed, can be used to activate the programmed device. To operate, simply press and release the appropriate programmed HomeLink® Universal Transceiver button. The amber indicator light will illuminate while the signal is being transmitted.

For convenience, the hand-held transmitter of the device may also be used at any time.

PROGRAMMING TROUBLE-DIAGNOSIS

If the HomeLink® does not quickly learn the hand-held transmitter information:

• Replace the hand-held transmitter batteries with new batteries.
• Position the hand-held transmitter with its battery area facing away from the HomeLink® surface.
• Press and hold both the HomeLink® and hand-held transmitter buttons without interruption.
• Position the hand-held transmitter 1 - 3 inches (26 - 76 mm) away from the HomeLink® surface. Hold the transmitter in that position for up to 15 seconds. If HomeLink® is not programmed within that time, try holding the transmitter in another position – keeping the indicator light in view at all times.

If you have any questions or are having difficulty programming your HomeLink® buttons, refer to the HomeLink® web site at: www.homelink.com or call 1-800-355-3515.

CLEARING THE PROGRAMMED INFORMATION

The following procedure clears the programmed information from both buttons. Individual buttons cannot be cleared. However, individual buttons can be reprogrammed. For additional information, refer to “Reprogramming a single HomeLink® button” in this section.

To clear all programming:

1. Press and hold the two outer HomeLink® buttons until the indicator light begins to flash in approximately 10 seconds. Do not hold for longer than 20 seconds.
2. Release both buttons.

HomeLink® is now in the programming mode and can be programmed at any time beginning with “Programming HomeLink®” - Step 1.
REPROGRAMMING A SINGLE HOMELINK® BUTTON

To reprogram a HomeLink® Universal Transceiver button, complete the following:

1. Press and hold the desired HomeLink® button. **DO NOT** release the button.

2. The indicator light will begin to flash after 20 seconds. Without releasing the HomeLink® button, proceed with “Programming HomeLink®” - Step 1.

For questions or comments, contact HomeLink® at: www.homelink.com or 1–800–355–3515 (except Mexico).

The HomeLink® Universal Transceiver button has now been reprogrammed. The new device can be activated by pressing the HomeLink® button that was just programmed. This procedure will not affect any other programmed HomeLink® buttons.

IF YOUR VEHICLE IS STOLEN

If your vehicle is stolen, you should change the codes of any non-rolling code device that has been programmed into HomeLink®. Consult the Owner’s Manual of each device or call the manufacturer or dealer of those devices for additional information.

When your vehicle is recovered, you will need to reprogram the HomeLink® Universal Transceiver with your new transmitter information.

FCC Notice:

For USA:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For Canada:

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

KEYS

1. Integrated door lock key fob
2. Key number plate

CAUTION
Do not leave the ignition key inside the vehicle when you leave the vehicle.

A key number plate is supplied with your keys. Record the key number and keep it in a safe place (such as your wallet), not in the vehicle. If you lose your keys, it is recommended that you visit a NISSAN dealer for duplicates by using the key number.

NISSAN does not record key numbers so it is very important to keep track of your key number plate.

A key number is only necessary when you have lost all keys and do not have one to duplicate from. If you still have a key, it can be duplicated without knowing the key number.

Type A (if so equipped)
1. Integrated door lock key fob
2. Key number plate

Type B (if so equipped)
1. Intelligent Keys (two sets)
2. Mechanical key
3. Key number plate (one plate)

NISSAN INTELLIGENT KEY® (if so equipped)

Your vehicle can only be driven with the Intelligent Keys which are registered to your vehicle’s Intelligent Key components and NISSAN Vehicle Immobilizer System components.

3-2 Pre-driving checks and adjustments
**Never leave the keys in the vehicle.**

As many as four Intelligent Keys can be registered and used with one vehicle. The new keys must be registered prior to use with the Intelligent Key and NISSAN Vehicle Immobilizer System of your vehicle. It is recommended that you visit a NISSAN dealer for this service. Since the registration process requires erasing all memory in the Intelligent Key components, when registering new keys, be sure to take all Intelligent Keys that you have to a NISSAN dealer.

A key number plate is supplied with your keys. Record the key number and keep it in a safe place (such as your wallet), not in the vehicle. If you lose your keys, it is recommended that you visit a NISSAN dealer for duplicates by using the key number. NISSAN does not record key numbers so it is very important to keep track of your key number plate.

A key number is only necessary when you have lost all keys and do not have one to duplicate from. If you still have a key, it can be duplicated without knowing the key number.

---

**CAUTION**

Listed below are conditions or occurrences which will damage the Intelligent Key:

- Do not allow the Intelligent Key, which contains electrical components, to come into contact with water or salt water. This could affect the system function.
- Do not drop the Intelligent Key.
- Do not strike the Intelligent Key sharply against another object.
- Do not change or modify the Intelligent Key.
- Wetting may damage the Intelligent Key. If the Intelligent Key gets wet, immediately wipe until it is completely dry.
- Do not place the Intelligent Key for an extended period in an area where temperatures exceed 140°F (60°C).
- Do not attach the Intelligent Key with a key holder that contains a magnet.
- Do not place the Intelligent Key near equipment that produces a magnetic field, such as a TV, audio equipment and personal computers.

If an Intelligent Key is lost or stolen, NISSAN recommends erasing the ID code of that Intelligent Key from the vehicle. This may prevent the unauthorized use of the Intelligent Key to operate the vehicle. For information regarding the erasing procedure, it is recommended that you visit a NISSAN dealer.
Mechanical key

The Intelligent Key contains the mechanical key.

To remove the mechanical key, release the lock knob on the back of the Intelligent Key.

To install the mechanical key, firmly insert it into the Intelligent Key until the lock knob returns to the lock position.

Use the mechanical key to lock or unlock the driver’s door.

**CAUTION**

Always carry the mechanical key installed in the Intelligent Key slot.

For additional information, refer to “Doors” in this section.

NISSAN VEHICLE IMMOBILIZER SYSTEM KEYS

You can only drive your vehicle using the keys which are registered to the NISSAN Vehicle Immobilizer System components in your vehicle.

A mechanical key can be used for all the locks.

*Never leave the keys in the vehicle.*

Additional or replacement keys:

If you still have a key, the key number is not necessary when you need extra NISSAN Vehicle Immobilizer System keys. Your existing key can be duplicated without knowing the key number. As many as four NISSAN Vehicle Immobilizer System keys can be used with one vehicle. You should bring all NISSAN Vehicle Immobilizer System keys that you have to a NISSAN dealer for registration. This is because the registration process will erase the memory of all key codes previously registered into the NISSAN Vehicle Immobilizer System. After the registration process, these components will only recognize keys coded into the NISSAN Vehicle Immobilizer System during registration. Any key that is not given to the dealer at the time of registration will no longer be able to start your vehicle.

**CAUTION**

Do not allow the immobilizer system key, which contains an electrical transponder, to come into contact with water or salt water. This could affect system function.
When the doors are locked using one of the following methods, the doors cannot be opened using the inside or outside door handles. The doors must be unlocked to open the doors.

---

**WARNING**

- Always have the doors locked while driving. Along with the use of seat belts, this provides greater safety in the event of an accident by helping to prevent persons from being thrown from the vehicle. This also helps keep children and others from unintentionally opening the doors, and will help keep out intruders.

- Before opening any door, always look for and avoid oncoming traffic.

---

- To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, including entrapment in windows and/or inadvertent door lock activation, do not leave children, people who require the assistance of others and/or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and/or pets.

---

**Driver's side**

LOCKING WITH KEY (if so equipped)

To lock or unlock the vehicle, turn the key as shown.

Manual

To lock either the driver or passenger side door, turn the key toward the front of the vehicle 1. To unlock, turn it toward the rear 2.
Power

The power door lock system allows you to lock or unlock all doors at the same time.

Turning the key toward the front 1 of the vehicle locks all doors.

Turning the key one time toward the rear 2 of the vehicle unlocks that door. From that position, returning the key to neutral 3 (where the key can only be removed and inserted) and turning it toward the rear again 4 within five seconds unlocks all doors.

LOCKING WITH INSIDE LOCK KNOB

To lock the door without the key, move the inside lock knob to the lock position 1, then close the door.

To unlock the door without the key, move the inside lock knob to the unlock position 2.

LOCKING WITH POWER DOOR LOCK SWITCH

To lock all the doors without a key, push the door lock switch (driver’s or front passenger’s side) to the lock position 1. When locking the door this way, be certain not to leave the key inside the vehicle.

To unlock all the doors without a key, push the door lock switch (driver’s or front passenger’s side) to the unlock position 2.

3-6 Pre-driving checks and adjustments
Lockout protection

When the power door lock switch is moved to the lock position and any door is open, all doors will lock and unlock automatically. With the Intelligent Key left in the vehicle while any door open, all doors will unlock automatically and a chime will sound after the door is closed.

These functions help to prevent the Intelligent Key from being accidentally locked inside the vehicle.

AUTOMATIC DOOR LOCKS (if so equipped)

- All doors lock automatically when the vehicle speed reaches 15 mph (24 km/h).
- Continuously Variable Transmission (CVT) (if so equipped)
  - All doors unlock automatically when the transmission is placed in the P (Park) position.
- Manual transmission (if so equipped)
  - All doors unlock automatically when the ignition is placed in the off position.

- Vehicles not equipped with Intelligent Key (if so equipped)
  - All doors unlock automatically when the transmission is placed in the P (Park) position (if so equipped), the ignition is turned to the OFF position or when the key is removed from the ignition.

NOTE:
The automatic door unlock function can be changed using the “Vehicle Settings” of the vehicle information display. For additional information, refer to “Vehicle information display” in the “Instruments and controls” section of this manual (if so equipped).

CHILD SAFETY REAR DOOR LOCK

Child safety locks help prevent the rear doors from being opened accidentally, especially when small children are in the vehicle.

The child safety lock levers are located on the edge of the rear doors.

When the lever is in the unlock position 2, the door can be opened from the outside or the inside.

When the lever is in the LOCK position 1, the door can be opened only from the outside.

Pre-driving checks and adjustments 3-7
REMOTE KEYLESS ENTRY SYSTEM (if so equipped)

WARNING

• Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.

• The remote keyless entry key fob transmits radio waves when the buttons are pressed. The FAA advises radio waves may affect aircraft navigation and communication systems. Do not operate the remote keyless entry key fob while on an airplane. Make sure the buttons are not operated unintentionally when the unit is stored for a flight.

• Do not place the key fob for an extended period in an area where temperatures exceed 140°F (60°C).

• Do not attach the key fob with a key holder that contains a magnet.

• Do not place the key fob near equipment that produces a magnetic field, such as a TV, audio equipment and personal computers.

If a key fob is lost or stolen, NISSAN recommends erasing the ID code of that key fob. This will prevent the key fob from unauthorized use to unlock the vehicle. For information regarding the erasing procedure, it is recommended that you visit a NISSAN dealer.

As many as four key fobs can be used with one vehicle. For information concerning the purchase and use of additional key fobs, it is recommended that you visit a NISSAN dealer.

The key fob will not function when:

• The battery is discharged.

• The distance between the vehicle and the key fob is over 33 ft (10 m).

The panic alarm will not activate when the key is in the ignition switch.

CAUTION

Listed below are conditions or occurrences which will damage the key fob:

• Do not allow the key fob, which contains electrical components, to come into contact with water or salt water. This could affect the system function.

• Do not drop the key fob.

• Do not strike the key fob sharply against another object.

• Do not change or modify the key fob.

• Wetting may damage the key fob. If the key fob gets wet, immediately wipe until it is completely dry.

It is possible to lock/unlock all doors, turn the interior lights on, and activate the panic alarm by using the key fob from outside the vehicle.

Be sure to remove the key from the vehicle before locking the doors.

The key fob can operate at a distance of approximately 33 ft (10 m) from the vehicle. The effective distance depends on the conditions around the vehicle.

3-8  Pre-driving checks and adjustments
HOW TO USE REMOTE KEYLESS ENTRY SYSTEM

Locking the doors
1. Remove the ignition key.
2. Close all the doors.
3. Press the button on the key fob.
   - All the doors will lock.
   - The hazard indicator flashes twice and the horn beeps once.

NOTE:
An auto-relock function will operate after a full or partial unlock, when no further user action occurs. The relock will operate approximately 1 minute after full or partial unlock. The auto-relock function is canceled when any door is opened or the key is inserted into the ignition.

Unlocking the doors
1. Press the button on the key fob to unlock the driver’s door.
2. The hazard warning lights flash once.
3. Press the button again within 5 seconds to unlock all doors.

Pre-driving checks and adjustments 3-9
Releasing the trunk lid
Press the button on the key fob for longer than 0.5 seconds to open the trunk lid. The trunk release button on the key fob will not operate when the ignition switch is placed in the ON position.

Using the panic alarm
If you are near your vehicle and feel threatened, you may activate the panic alarm to call attention by pressing and holding the button on the key fob for longer than 0.5 seconds. The panic alarm will stay on for a period of time. The panic alarm stops when:
- It has run for a period of time.
- Any button is pressed on the key fob.

Using the interior light
Press the button on the key fob once to turn on the interior lights. For additional information, refer to “Interior lights” in the “Instruments and controls” section of this manual.
Silencing the horn beep feature

If desired, the horn beep feature can be deactivated using the key fob.

To deactivate: Press and hold the and buttons for at least 2 seconds. The hazard warning lights will flash three times to confirm that the horn beep feature has been deactivated.

To activate: Press and hold the and buttons for at least 2 seconds once more.

The hazard warning lights will flash once and the horn will sound once to confirm that the horn beep feature has been reactivated.

Deactivating the horn beep feature does not silence the horn if the alarm is triggered.

NISSAN INTELLIGENT KEY® (if so equipped)

WARNING

- Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
- The Intelligent Key transmits radio waves when the buttons are pressed. The FAA advises the radio waves may affect aircraft navigation and communication systems. Do not operate the Intelligent Key while on an airplane. Make sure the buttons are not operated unintentionally when the unit is stored for a flight.

The Intelligent Key system can operate all the door locks using the remote control function or pushing the request switch on the vehicle without taking the key out from a pocket or purse. The operating environment and/or conditions may affect the Intelligent Key system operation.

Be sure to read the following before using the Intelligent Key system.
CAUTION

Be sure to carry the Intelligent Key with you when operating the vehicle.
Never leave the Intelligent Key in the vehicle when you leave the vehicle.

The Intelligent Key is always communicating with the vehicle as it receives radio waves. The Intelligent Key system transmits weak radio waves. Environmental conditions may interfere with the operation of the Intelligent Key system under the following operating conditions:

- When operating near a location where strong radio waves are transmitted, such as a TV tower, power station and broadcasting station.
- When in possession of wireless equipment, such as a cellular telephone, transceiver or a CB radio.
- When the Intelligent Key is in contact with or covered by metallic materials.
- When any type of radio wave remote control is used nearby.
- When the Intelligent Key is placed near an electric appliance such as a personal computer.
- When the vehicle is parked near a parking meter.

In such cases, correct the operating conditions before using the Intelligent Key function or use the mechanical key.

Although the life of the battery varies depending on the operating conditions, the battery’s life is approximately two years. If the battery is discharged, replace it with a new one.

When the Intelligent Key battery is low, the Intelligent Key system warning light ( ) will blink green for about 30 seconds after the ignition switch is placed in the ON position.

Since the Intelligent Key is continuously receiving radio waves, if the key is left near equipment which transmits strong radio waves, such as signals from a TV and personal computer, the battery life may become shorter.

For information regarding replacement of a battery, refer to "Battery replacement" in the "Do-it-yourself" section of this manual.

As many as four Intelligent Keys can be registered and used with one vehicle. For information about the purchase and use of additional Intelligent Keys, it is recommended that you visit a NISSAN dealer.

CAUTION

Listed below are conditions or occurrences which will damage the Intelligent Key:

- Do not allow the Intelligent Key, which contains electrical components, to come into contact with water or salt water. This could affect the system function.
- Do not drop the Intelligent Key.
- Do not strike the Intelligent Key sharply against another object.
- Do not change or modify the Intelligent Key.
- Wetting may damage the Intelligent Key. If the Intelligent Key gets wet, immediately wipe until it is completely dry.
- Do not place the Intelligent Key for an extended period in an area where temperatures exceed 140°F (60°C).
- Do not attach the Intelligent Key with a key holder that contains a magnet.
Do not place the Intelligent Key near equipment that produces a magnetic field, such as a TV, audio equipment and personal computers.

If an Intelligent Key is lost or stolen, NISSAN recommends erasing the ID code of that Intelligent Key from the vehicle. This may prevent the unauthorized use of the Intelligent Key to operate the vehicle. For information regarding the erasing procedure, it is recommended that you visit a NISSAN dealer.

OPERATING RANGE

The Intelligent Key functions can only be used when the Intelligent Key is within the specified operating range from the request switch ①.

When the Intelligent Key battery is discharged or strong radio waves are present near the operating location, the Intelligent Key operating range becomes narrower, and the Intelligent Key may not function properly.

The operating range is within 31.50 in (80 cm) from each request switch ①.

If the Intelligent Key is too close to the door glass, handle or rear bumper, the request switches may not function.

When the Intelligent Key is within the operating range, it is possible for anyone, even someone who does not carry the Intelligent Key, to push the request switch to lock/unlock the doors.
DOOR LOCKS/UNLOCKS

PRECAUTION

- Do not push the door handle request switch with the Intelligent Key held in your hand as illustrated. The close distance to the door handle will cause the Intelligent Key system to have difficulty recognizing that the Intelligent Key is outside the vehicle.

- After locking with the door handle request switch, verify the doors are securely locked by testing them.

- To prevent the Intelligent Key from being left inside the vehicle, make sure you carry the Intelligent Key with you and then lock the doors.

- Do not pull the door handle before pushing the door handle request switch. The door will be unlocked but will not open. Release the door handle once and pull it again to open the door.

NISSAN INTELLIGENT KEY® OPERATIONS

You can lock or unlock the doors and trunk lid without taking the Intelligent Key out of your pocket or bag.

When you carry the Intelligent Key with you, you can lock or unlock all doors and trunk lid by pushing the door handle request switch within the range of operation.
Locking doors

1. Move the shift lever to the P (Park) position (Continuously Variable Transmission only), place the ignition switch in the LOCK position and make sure you carry the Intelligent Key with you.

2. Close all doors.

3. Push any door handle request switch while carrying the Intelligent Key with you.

4. All doors and the trunk will lock.

5. The hazard warning lights flash twice and the outside chime sounds twice.

**NOTE:**

- Doors and trunk lid lock with the door handle request switch while the ignition switch is not in the LOCK position.
- Doors and trunk lid do not lock by pushing the door handle request switch while any door is open. However, doors lock with the mechanical key even if any door is open.
- Doors and trunk lid do not lock with the door handle request switch with the Intelligent Key inside the vehicle; a beep sounds to warn you. However, when an Intelligent Key is inside the vehicle, doors can be locked with another Intelligent Key.

**CAUTION**

- After locking the doors using the request switch, make sure that the doors have been securely locked by operating the door handle or the trunk opener switch.
- When locking the doors using the request switch, make sure to have the Intelligent Key in your possession before operating the request switch to prevent the Intelligent Key from being left in the vehicle.
- The request switch is operational only when the Intelligent Key has been detected by the Intelligent Key system.
Lockout protection

To prevent the Intelligent Key from being accidentally locked in the vehicle, lockout protection is equipped with the Intelligent Key.

When the driver’s side door is open, the doors are locked and then the Intelligent Key is put inside the vehicle and all the doors are closed; the lock will automatically unlock and the door buzzer sounds.

NOTE:
The doors may not lock when the Intelligent Key is in the same hand that is operating the request switch to lock the door. Put the Intelligent Key in a purse, pocket or your other hand.

CAUTION
The lockout protection may not function under the following conditions:
• When the Intelligent Key is placed on top of the instrument panel.
• When the Intelligent Key is placed on top of the rear parcel shelf.
• When the Intelligent Key is placed inside the glove box or a storage bin.

Unlocking doors

1. Carry the Intelligent Key.
2. Push the door handle request switch ①.
3. The hazard warning lights flash once and the outside chime sounds once.
4. Push the door handle request switch ① again within 1 minute to unlock all doors and the trunk lid.
If a door handle is pulled while unlocking the doors, that door may not be unlocked. Returning the door handle to its original position will unlock the door. If the door does not unlock after returning the door handle, push the door handle request switch to unlock the door.

All doors and trunk lid will be locked automatically unless one of the following operations is performed within 1 minute after pushing the request switch.

- Opening any door or the trunk lid.
- Pushing the ignition switch.

The interior light timer illuminates for a period of time when a door is unlocked and the room light switch is in the DOOR position.

The interior light can be turned off without waiting by performing one of the following operations.

- Placing the ignition switch in the ON position.
- Locking the doors with the remote control.
- Switching the room light switch to the OFF position.

Opening the trunk lid

1. Push the trunk opener request switch \( \text{A} \) for more than 1 second while carrying the Intelligent Key with you.

2. The trunk will unlatch. A chime will sound four times.

3. Raise the trunk lid to open the trunk.

Lockout protection

To prevent the Intelligent Key from being accidentally locked in the trunk, lockout protection is equipped with the Intelligent Key.

Pre-driving checks and adjustments 3-17
When all doors are locked and the trunk lid is closed with the Intelligent Key inside the trunk, the outside buzzer will sound and the trunk will open.

**HOW TO USE THE REMOTE KEYLESS ENTRY FUNCTION**

The remote keyless entry function can operate all door locks using the remote keyless function of the Intelligent Key. The remote keyless function can operate at a distance of 33 ft (10 m) away from the vehicle. The operating distance depends upon the conditions around the vehicle.

The remote keyless entry function will not function under the following conditions:

- The Intelligent Key is not within the operational range.
- The doors or the trunk are open or not closed securely.
- The Intelligent Key battery is discharged.

**CAUTION**

When locking the doors using the Intelligent Key, be sure not to leave the key in the vehicle.

**Locking doors**

1. Place the ignition switch in the LOCK position.
2. Close all doors.
3. Press the button on the Intelligent Key.
4. The hazard warning lights flash twice and the horn beeps once.
5. All doors and the trunk lid will be locked.

**CAUTION**

After locking the doors using the Intelligent Key, be sure that the doors have been securely locked by operating the door handles.
Unlocking doors

1. Press the button on the Intelligent Key to unlock the driver’s door.
2. The hazard warning lights flash once.
3. Press the button again within 1 minute to unlock all doors and trunk lid.

All doors and trunk lid will be locked automatically unless one of the following operations is performed within 1 minute after pressing the button:

- Opening any doors or trunk lid.
- Pushing the ignition switch.

The interior light illuminates for a period of time when a door is unlocked and the room light switch is in the DOOR position. The light can be turned off without waiting by performing one of the following operations:

- Placing the ignition switch in the ON position.
- Locking the doors with the Intelligent Key.
- Switching the room light switch to the OFF position.

Releasing the trunk lid

Press the button for longer than 0.5 seconds to open the trunk lid. The trunk release button will not operate when the ignition switch is placed in the ON position.
Using the panic alarm
If you are near your vehicle and feel threatened, you may activate the panic alarm to call attention by pressing and holding the button on the Intelligent Key for longer than 0.5 seconds. The panic alarm and headlights will stay on for a period of time.

The panic alarm stops when:
- It has run for a period of time, or
- Any button is pressed on the Intelligent Key.
- The request switch on the driver or passenger door is pushed and the Intelligent Key is in range of the door handle.

Silencing the horn beep feature
If desired, the horn beep feature can be deactivated using the Intelligent Key.

To deactivate: Press and hold the and buttons for at least 2 seconds. The hazard warning lights will flash three times to confirm that the horn beep feature has been deactivated.

To activate: Press and hold the and buttons for at least 2 seconds once more.
The hazard warning lights will flash once and the horn will sound once to confirm that the horn beep feature has been reactivated.

Deactivating the horn beep feature does not silence the horn if the alarm is triggered.

WARNING LIGHTS AND AUDIBLE REMINDERS

The Intelligent Key is equipped with a function that is designed to minimize improper operations and to help prevent the vehicle from being stolen. The warning buzzer sounds and the warning light illuminates when improper operations are detected.

CAUTION

When the buzzer sounds and the warning light illuminates, be sure to check both the vehicle and the Intelligent Key.

WARNING SIGNALS

To help prevent the vehicle from moving unexpectedly by erroneous operation of the Intelligent Key or to help prevent the vehicle from being stolen, a chime or buzzer sounds from inside and outside the vehicle and a warning light comes on in the instrument panel.

When a chime or beep sounds or the warning light comes on, be sure to check the vehicle and the Intelligent Key.

1. P (Park) position selecting warning light
2. NISSAN Intelligent Key® warning light

Pre-driving checks and adjustments 3-21
Audible reminder and warning when locking the doors (if so equipped)
When the chime or buzzer sounds from inside and outside the vehicle, check for the following:
• The ignition switch is placed in the LOCK position.
• The Intelligent Key is not left inside the vehicle.
• The shift lever is in the P (Park) position.

Audible reminder and warning when the engine stops (if so equipped)
When the P position selecting warning light ( ) in the instrument panel blinks in red:
• Make sure the shift lever is in the P (Park) position.
When the chime sounds intermittently:
• Make sure the shift lever is in the P (Park) position and the ignition switch is placed in the LOCK position.

If the chime sounds continuously when the driver’s door is opened, check the following:
• The shift lever is placed in the P (Park) position and the ignition switch is placed in the LOCK position.
• The warning chime may stop when one of the following is performed:
  – Returning the ignition switch to the LOCK position.
  – Closing the doors.

Alarm and warning when the engine starts
When the Intelligent Key system warning light ( )眨 blinks red and the outside buzzer sounds, make sure the Intelligent Key is inside the vehicle.

Warning for low battery power
When the Intelligent Key battery is low, the Intelligent Key system warning light ( ) will blink green for about 30 seconds after the ignition switch is placed in the ON position. This warning is to let you know that the battery of the Intelligent Key will run down soon. Replace it with a new one. For additional information, refer to “Battery replacement” in the “Do-it-yourself” section of this manual.

It is recommended that you visit a NISSAN dealer for battery replacement.

Preventing the Intelligent Key from being left in the vehicle
If you lock all doors using the power door lock switch with the Intelligent Key in the vehicle, all of the doors unlock immediately and the buzzer will warn you when the door is closed.

3-24 Pre-driving checks and adjustments
1. Pull the hood lock release handle located below the instrument panel until the hood springs up slightly.

2. Locate the lever in between the hood and grille and push the lever side-ways with your fingertips.

3. Raise the hood.

4. Remove the support rod and insert it into the slot marked by an arrow.

**NOTE:**

- Do not place the support rod in a location other than the designated slot.
- Hold the coated parts when removing or resetting the support rod. Avoid direct contact with the metal parts, as they may be hot immediately after the engine has been stopped.

When closing the hood, return the support rod to its original position, lower the hood to approximately 12 in (30 cm) above the latch and release it. This allows proper engagement of the hood latch.

**WARNING**

- Make sure the hood is completely closed and latched before driving. Failure to do so could cause the hood to fly open and result in an accident.
- If you see steam or smoke coming from the engine compartment, to avoid injury do not open the hood.

Pre-driving checks and adjustments 3-25
**TRUNK LID**

**WARNING**

- Do not drive with the trunk lid open. This could allow dangerous exhaust gases to be drawn into the vehicle. For additional information, refer to “Exhaust gas (carbon monoxide)” in the “Starting and driving” section of this manual.

To open the trunk lid, push the opener switch down in the direction of the arrow as illustrated.

To close the trunk lid, lower and push the trunk lid down securely.

**NOTE:**

You can open the trunk lid with the Intelligent Key. For additional information, refer to “NISSAN Intelligent Key®” in this section.

**INTERIOR TRUNK LID RELEASE**

**WARNING**

Closely supervise children when they are around cars to prevent them from playing and becoming locked in the trunk where they could be seriously injured. Keep the car locked, with the rear seatback and trunk lid securely latched when not in use, and prevent children’s access to car keys.
The interior trunk lid release mechanism provides a means of escape for children and adults in the event they become locked inside the trunk.

To open the trunk from the inside, pull the illuminated release handle until the lock releases and push up on the trunk lid. The release handle is made of a material that glows in the dark after a brief exposure to ambient light.

The handle is located inside the trunk compartment on the interior of the trunk lid.

INTERIOR TRUNK ACCESS

The trunk can be accessed from the passenger side of the rear seat.

1. Move the front passenger seat to the most forward position.
2. Open the access cover on the rear parcel shelf.
3. Push down on the button on the rear parcel shelf.
4. Fold down the passenger’s side seatback.

**WARNING**

- Never allow anyone to ride in the cargo area or on the rear seat when it is in the fold-down position. Use of these areas by passengers without proper restraints could result in serious injury or death in an accident or sudden stop.

- Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

- When returning the seatbacks to the upright position, be certain they are completely secured in the latched position. If they are not completely secured, passengers may be injured in an accident or sudden stop.

- Closely supervise children when they are around cars to prevent them from playing and becoming locked in the trunk where they could be seriously injured. Keep the car locked, with the rear seatback and trunk lid securely latched when not in use, and prevent children’s access to car keys.

FUEL-FILLER DOOR

The fuel-filler door release is located below the instrument panel. To open the fuel-filler door, pull the release. To lock, close the fuel-filler door securely.
FUEL-FILLER CAP

**WARNING**

- Gasoline is extremely flammable and highly explosive under certain conditions. You could be burned or seriously injured if it is misused or mishandled. Always stop the engine and do not smoke or allow open flames or sparks near the vehicle when refueling.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.
- Use only an original equipment type fuel-filler cap as a replacement. It has a built-in safety valve needed for proper operation of the fuel system and emission control system. An incorrect cap can result in a serious malfunction and possible injury. It could also cause the Malfunction Indicator Light (MIL) to come on.
- Never pour fuel into the throttle body to attempt to start your vehicle.

**CAUTION**

- Do not fill a portable fuel container in the vehicle or trailer. Static electricity can cause an explosion of flammable liquid, vapor or gas in any vehicle or trailer. To reduce the risk of serious injury or death when filling portable fuel containers:
  - Always place the container on the ground when filling.
  - Do not use electronic devices when filling.
  - Keep the pump nozzle in contact with the container while you are filling it.
  - Use only approved portable fuel containers for flammable liquid.
- Do not use a fuel containing more than 15% ethanol in your vehicle. For additional information, refer to “Fuel recommendation” in the “Technical and consumer information” section of this manual.
- The LOOSE FUEL CAP warning message will appear if the fuel-filler cap is not properly tightened. It may take a few driving trips for the message to be displayed. Failure to tighten the fuel-filler cap properly after the LOOSE FUEL CAP warning message appears may cause the Malfunction Indicator Light (MIL) to illuminate.
• Failure to tighten the fuel-filler cap properly may cause the Malfunction Indicator Light (MIL) to illuminate. If the light illuminates because the fuel-filler cap is loose or missing, tighten or install the cap and continue to drive the vehicle. The light should turn off after a few driving trips. If the light does not turn off after a few driving trips, have the vehicle inspected. It is recommended that you visit a NISSAN dealer for this service.

• For additional information, refer to "Malfunction Indicator Light (MIL)" in the "Instruments and controls" section of this manual.

• If fuel is spilled on the vehicle body, flush it away with water to avoid paint damage.

To remove the fuel-filler cap:
1. Turn the fuel-filler cap counterclockwise to remove.
2. Put the fuel-filler cap on the cap holder while refueling.

To install the fuel-filler cap:
1. Insert the fuel-filler cap straight into the fuel-filler tube.
2. Turn the fuel-filler cap clockwise until a single click is heard.

Type A (if so equipped)
LOOSE FUEL CAP warning
The LOOSE FUEL CAP warning appears in the odometer or vehicle information display (if so equipped) when the fuel-filler cap is not tightened correctly after the vehicle has been refueled. It may take a few driving trips for the message to be displayed. To turn off the warning, do the following:
1. Remove and install the fuel-filler cap as previously described as soon as possible.
2. Tighten the fuel-filler cap until it clicks.

Pre-driving checks and adjustments 3-29
3. Press the button A on the steering wheel for about 1 second to turn off the LOOSE FUEL CAP warning B after tightening the fuel-filler cap.

STEERING WHEEL

TILT OPERATION
Pull the lock lever down ① and adjust the steering wheel up or down ② to the desired position.

Push the lock lever up ① firmly to lock the steering wheel in place.

TELESCOPIC OPERATION
Pull the lock lever down ① and adjust the steering wheel forward or backward ③ to the desired position.

Push the lock lever up ① firmly to lock the steering wheel in place.

SUN VISORS

① To block glare from the front, swing down the sun visor.

② To block glare from the side, remove the sun visor from the center mount and swing the visor to the side.
3 Slide the extension sun visor in or out as needed.

**CAUTION**
- Do not store the sun visor before returning the extension to its original position.
- Do not pull the extension sun visor forcibly downward.

**VANITY MIRRORS**
To access the vanity mirror, pull the sun visor down and flip open the mirror cover. Some vanity mirrors are illuminated and turn on when the mirror cover is open.

**CARD HOLDER (driver’s side only)**
To access the card holder, pull the sun visor down and slide card in the card holder. Do not view information while operating the vehicle.
MIRRORS

MANUAL ANTI-GLARE REARVIEW MIRROR (if so equipped)
Use the night position ① to reduce glare from the headlights of vehicles behind you at night.
Use the day position ② when driving during daylight hours.

WARNING
Use the night position only when necessary, because it reduces rear view clarity.

AUTOMATIC ANTI-GLARE REARVIEW MIRROR (if so equipped)
The inside mirror is designed so that it automatically dims according to the intensity of the headlights of the vehicle following you. The automatic anti-glare feature is activated when the ignition switch is in the ON position.

NOTE:
Do not hang any objects over the sensors ① or apply glass cleaner to the sensors. Doing so will reduce the sensitivity of the sensors, resulting in improper operation.
The indicator light ③ will illuminate when the automatic anti-glare feature is operating.

3-32 Pre-driving checks and adjustments
Type B (if so equipped)

- To turn off the anti-glare feature, press and hold the O button for 3-6 seconds. The indicator light will turn off.
- To turn on the anti-glare feature, press and hold the | button for 3-6 seconds. The indicator light will turn on.

For additional information on HomeLink® Universal Transceiver operation, refer to “HomeLink® Universal Transceiver” in the “Instruments and controls” section of this manual.

**OUTSIDE MIRRORS**

The outside mirror remote control will operate only when the ignition switch is in the ACC or ON position.

Move the small switch ① to select the right or left mirror. Adjust each mirror to the desired position using the large switch ②. Move the switch to the center (neutral) position to prevent accidentally moving the mirror.

**WARNING**

- Objects viewed in the outside mirror on the passenger side are closer than they appear. Be careful when moving to the right. Using only this mirror could cause an accident. Use the inside mirror or glance over your shoulder to properly judge distances to other objects.
- Do not adjust the mirrors while driving. You could lose control of your vehicle and cause an accident.
Manual folding outside mirrors
Pull the outside mirror toward the door to fold it.

Heated mirrors (if so equipped)
Some outside mirrors can be heated to defrost, defog, or de-ice for improved visibility. For additional information, refer to “Rear window and outside mirror (if so equipped) defroster switch” in the “Instruments and controls” section of this manual.

**WARNING**

- Positioning of the heating or air conditioning controls and display controls should not be done while driving in order that full attention may be given to the driving operation.
- Do not disassemble or modify this system. If you do, it may result in accidents, fire, or electrical shock.
- Do not use this system if you notice any abnormality, such as a frozen screen or lack of sound. Continued use of the system may result in accident, fire or electric shock.
- In case you notice any foreign object in the system hardware, spill liquid on it, or notice smoke or smell coming from it, stop using the system immediately. Ignoring such conditions may lead to accidents, fire or electrical shock. It is recommended that you visit a NISSAN dealer for servicing.

CONTROL PANEL BUTTONS — COLOR SCREEN WITH NAVIGATION SYSTEM (if so equipped)

1. MAP button*
2. Display screen
3. button**
4. APPS button
5. (brightness control) button
6. BACK button
7. ON-OFF button/VOL (volume) control knob
8. CAMERA button

Monitor, climate, audio, phone and voice recognition systems
9. NAV button*

* For additional information regarding the navigation system control buttons, refer to the separate NissanConnect® Owner’s Manual.

** For additional information regarding the Bluetooth® Hands-Free Phone System control button, refer to ‘Bluetooth® Hands-Free Phone System with navigation system’ in this section.

When you use this system, make sure the engine is running.

If you use the system with the engine not running (ignition ON or ACC) for a long time, it will discharge the battery, and the engine will not start.

Reference symbols:
‘Example’ — Words marked in quotes refer to a key shown only on the display. These keys can be selected by touching the screen.

HOW TO USE THE TOUCH-SCREEN

** CAUTION **

- The glass display screen may break if it is hit with a hard or sharp object. If the glass screen breaks, do not touch it. Doing so could result in an injury.
- To clean the display, never use a rough cloth, alcohol, benzine, thinner or any kind of solvent or paper towel with a chemical cleaning agent. They will scratch or deteriorate the panel.
- Do not splash any liquid such as water or car fragrance on the display. Contact with liquid will cause the system to malfunction.

To help ensure safe driving, some functions cannot be operated while driving.

The on-screen functions that are not available while driving will be ‘grayed out’ or muted.

Park the vehicle in a safe location and then operate the navigation system.

** WARNING **

- ALWAYS give your full attention to driving.
- Avoid using vehicle features that could distract you. If distracted, you could lose control of your vehicle and cause an accident.

**/\ Button**

To change the display brightness, press the button. Pressing the button again will change the display to the auto or the night display. If no operation is performed within 5 seconds, the display will return to the previous display.

Press and hold the button for more than 2 seconds to turn the display off. Press the button again to turn the display on.

**How to Use the On-Off Button/Vol (Volume) Control Knob**

Press the ON-OFF button to turn audio function on and off. Turn the volume control knob to adjust audio volume.

**How to Use the Camera Button**

For additional information, refer to “Rear-View Monitor” in this section.
1. CAMERA button (if so equipped)

Monitor, climate, audio, phone and voice recognition systems
WARNING

- Failure to follow the warnings and instructions for proper use of the Rear-View Monitor system could result in serious injury or death.

- RearView Monitor is a convenience feature and is not a substitute for proper backing. Always turn and look out the windows and check mirrors to be sure that it is safe to move before operating the vehicle. Always back up slowly.

- The system is designed as an aid to the driver in showing large stationary objects directly behind the vehicle, to help avoid damaging the vehicle.

- The distance guide line and the vehicle width line should be used as a reference only when the vehicle is on a level paved surface. The distance viewed on the monitor is for reference only and may be different than the actual distance between the vehicle and displayed objects.

CAUTION

- Do not scratch the camera lens when cleaning dirt or snow from the front of the camera.

The RearView Monitor system automatically shows a rear view of the vehicle when the shift lever is shifted into the R (Reverse) position. Press the CAMERA button (if so equipped) while in the R (Reverse) position to cycle through guideline options. The radio can still be heard while the RearView Monitor is active.

To display the rear view, the RearView Monitor system uses a camera located just above the vehicle’s license plate.

REARVIEW MONITOR SYSTEM OPERATION

With the ignition switch in the ON position, move the shift lever to the R (Reverse) position to operate the RearView Monitor.
HOW TO READ THE DISPLAYED LINES

Guiding lines which indicate the vehicle width and distances to objects with reference to the vehicle body line A are displayed on the monitor.

**Distance guide lines**
Indicate distances from the vehicle body.
- Red line 1: approx. 1.5 ft (0.5 m)
- Yellow line 2: approx. 3 ft (1 m)
- Green line 3: approx. 7 ft (2 m)
- Green line 4: approx. 10 ft (3 m)

Vehicle width guide lines 5
Indicate the vehicle width when backing up.

DIFFERENCE BETWEEN PREDICTED AND ACTUAL DISTANCES
The displayed guidelines and their locations on the ground are for approximate reference only. Objects on uphill or downhill surfaces or projecting objects will be actually located at distances different from those displayed in the monitor relative to the guidelines (refer to illustrations). When in doubt, turn around and view the objects as you are backing up, or park and exit the vehicle to view the positioning of objects behind the vehicle.

Backing up on a steep uphill
When backing up the vehicle up a hill, the distance guide lines and the vehicle width guide lines are shown closer than the actual distance. Note that any object on the hill is further than it appears on the monitor.
Backing up on a steep downhill
When backing up the vehicle down a hill, the distance guide lines and the vehicle width guide lines are shown farther than the actual distance. Note that any object on the hill is closer than it appears on the monitor.

Backing up near a projecting object
The vehicle may seem to nearly clear the object in the display. However, the vehicle may hit the object if it projects over the actual backing up course.

Backing up behind a projecting object
The position \( C \) is shown farther than the position \( B \) in the display. However, the position \( C \) is actually at the same distance as the position \( A \). The vehicle may hit the...
object when backing up to the position A if the object projects over the actual backing up course.

ADJUSTING THE SCREEN

The procedure for adjusting the display settings of the screen differs depending on the type of screen present on the vehicle.

For vehicles without navigation system:
1. Firmly apply the brake and place the shift lever in R (Reverse).
2. Press the ENTER/SETTING button.
3. The screen will display the Brightness settings.
4. Turn the TUNE/FOLDER or TUNE/SCROLL knob to adjust the setting up or down.
5. Press the ENTER/SETTING button again to display the Contrast settings.
6. Turn the TUNE/FOLDER or TUNE/SCROLL knob to adjust the setting up or down.
7. Press the ENTER/SETTING button to complete the adjustment.

Models without navigation system

Models with navigation system

Monitor, climate, audio, phone and voice recognition systems
For vehicles with navigation system:

1. Firmly apply the brake and place the shift lever in R (Reverse).
2. Press the button on the control panel.
3. The screen will display the Night settings.
4. Turn the TUNE knob to adjust the setting up or down.
5. Press the button again to access the Auto settings.
6. Turn the TUNE knob to adjust the setting up or down.

NOTE:

Do not adjust any of the display settings of the RearView Monitor while the vehicle is moving. Make sure the parking brake is firmly applied.

### REARVIEW MONITOR SYSTEM LIMITATIONS

**WARNING**

Listed below are the system limitations for RearView Monitor. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.

- The system cannot completely eliminate blind spots and may not show every object.
- Underneath the bumper and the corner areas of the bumper cannot be viewed on the RearView Monitor because of its monitoring range limitation. The system will not show small objects below the bumper, and may not show objects close to the bumper or on the ground.
- Objects viewed in the RearView Monitor differ from actual distance because a wide-angle lens is used.
- Objects in the RearView Monitor will appear visually opposite compared to when viewed in the rearview and outside mirrors.

- Use the displayed lines as a reference. The lines are highly affected by the number of occupants, fuel level, vehicle position, road conditions and road grade.
- Make sure that the trunk is securely closed when backing up.
- Do not put anything on the rearview camera. The rearview camera is installed above the license plate.
- When washing the vehicle with high pressure water, be sure not to spray it around the camera. Otherwise, water may enter the camera unit causing water condensation on the lens, a malfunction, fire or an electric shock.
- Do not strike the camera. It is a precision instrument. Otherwise, it may malfunction or cause damage resulting in a fire or an electric shock.

The following are operating limitations and do not represent a system malfunction:

- When the temperature is extremely high or low, the screen may not clearly display objects.

Monitor, climate, audio, phone and voice recognition systems 4-15
• When strong light directly shines on the camera, objects may not be displayed clearly.

• Vertical lines may be seen in objects on the screen. This is due to strong reflected light from the bumper.

• The screen may flicker under fluorescent light.

• The colors of objects on the RearView Monitor may differ somewhat from the actual color of objects.

• Objects on the monitor may not be clear in a dark environment.

• There may be a delay when switching between views.

• If dirt, rain or snow accumulate on the camera, the RearView Monitor may not display objects clearly. Clean the camera by wiping it with a cloth dampened with a diluted mild cleaning agent and then wiping it with a dry cloth.

**SYSTEM MAINTENANCE**

If dirt, rain or snow accumulates on the camera, the RearView Monitor may not display objects clearly. Clean the camera by wiping it with a cloth dampened with a diluted mild cleaning agent and then wiping it with a dry cloth.

**CAUTION**

- Do not use alcohol, benzine or thinner to clean the camera. This will cause discoloration.

- Do not damage the camera as the monitor screen may be adversely affected.

Monitor, climate, audio, phone and voice recognition systems
Adjust airflow direction by moving the vent slides.

Open or close the vents by using the dial. Move the dial toward the ☝ to open the vents or toward the ☟ to close them.

**WARNING**

- The air conditioner cooling function operates only when the engine is running.
- Do not leave children or adults who would normally require the assistance of others alone in your vehicle. Pets should also not be left alone. They could accidentally injure themselves or others through inadvertent operation of the vehicle. Also, on hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
- Do not use the recirculation mode for long periods as it may cause the interior air to become stale and the windows to fog up.

**NOTE:**

- Odors from inside and outside the vehicle can build up in the air conditioner unit. Odor can enter the passenger compartment through the vents.

---

Monitor, climate, audio, phone and voice recognition systems  4-17
When parking, set the heater and air conditioner controls to turn off air recirculation to allow fresh air into the passenger compartment. This should help reduce odors inside the vehicle.

1. Fan control / system OFF dial
2. Air flow control buttons
3. Temperature control dial
4. Air recirculation button
5. Rear window and outside mirror (if so equipped) defroster switch
6. Front windshield defroster button

Monitor, climate, audio, phone and voice recognition systems
CONTROLS

Fan control dial
The fan control dial turns the fan on and off and controls fan speed.

Air flow control buttons
The air flow control buttons allow you to select the air flow outlets.

Air flows from center and side vents.
Air flows from center and side vents and the front and rear floor outlets.
Air flows mainly from the front and rear floor outlets.
Air flows from defroster outlets and the front and rear floor outlets.
Air flows mainly from defroster outlets.

Temperature control dial
The temperature control dial allows you to adjust the temperature of the outlet air. To lower the temperature, turn the dial to the left. To increase the temperature, turn the dial to the right.

Air recirculation button

On position (Indicator light on):
Interior air is recirculated inside the vehicle.
Press the button to the ON position when:
• driving on a dusty road.
• to prevent traffic fumes from entering passenger compartment.

Off position (Indicator light off):
Outside air is drawn into the passenger compartment and distributed through the selected outlet.
Use the OFF position for normal heater operation.

Rear window and outside mirror defroster switch
For additional information, refer to “Rear window and outside mirror (if so equipped) defroster switch” in the “Instruments and controls” section of this manual.

HEATER OPERATION

Heating
This mode is used to direct heated air to the foot outlets. Some air also flows from the defrost outlets and the side vent outlets.
1. Press the button to the OFF position for normal heating.
2. Press the air flow control button.
3. Turn the fan control dial to the desired position.
4. Turn the temperature control dial to the desired position.

Ventilation
This mode directs outside air to the side and center vents.
1. Press the button to the OFF position.
2. Press the air flow control button.
3. Turn the fan control dial to the desired position.
4. Turn the temperature control dial to the desired position.

Monitor, climate, audio, phone and voice recognition systems 4-19
Defrosting or defogging
This mode directs the air to the defrost outlets to defrost/defog the windows.
1. Press the defrost/defog button.
2. Turn the fan control dial to the desired position.
3. Turn the temperature control dial to the desired position between the middle and the hot position.
   • To quickly remove ice or fog from the windows, turn the fan control dial to the highest setting and the temperature control to the full HOT position.

Heating and defogging
This mode heats the interior and defogs the windshield.
1. Press the air flow control button.
2. Turn the fan control dial to the desired position.
3. Turn the temperature control dial to the desired position between the middle and the hot position.

Bi-level heating
The bi-level mode directs warmed air to the side and center vents and to the front and rear floor outlets.
1. Press the button to the OFF position.
2. Press the air flow control button.
3. Turn the fan control dial to the desired position.
4. Turn the temperature control dial to the desired position.

Operating tips
Clear snow and ice from the wiper blades and air inlet in front of the windshield. This improves heater operation.

AIR FLOW CHARTS
The following charts show the button and dial positions for MAXIMUM AND QUICK heating, defrosting or defogging. The air recirculation button should always be in the OFF position for heating and defrosting.
Defrosting/Defogging

1. Fan control / system OFF dial / A/C (air conditioner) button
2. Air flow control buttons
3. Temperature control dial / MAX A/C button
4. Air recirculation button
5. Rear window and outside mirror (if so equipped) defroster switch
6. Front windshield defroster button

**CONTROLS**

**Fan control dial**
The fan control dial turns the fan on and off, and controls fan speed.

**Air flow control buttons**
The air flow control buttons allow you to select the air flow outlets.
- MAX — Air flows from center and side vents with maximum cooling.
- Air flows from center and side vents.
- Air flows from center and side vents and foot outlets.
- Air flows mainly from foot outlets.
- Air flows from defroster outlets.
- Air flows mainly from de-froster outlets.

**Temperature control dial**
The temperature control dial allows you to adjust the temperature of the outlet air. To lower the temperature, turn the dial to the left. To increase the temperature, turn the dial to the right.
Air recirculation button

**ON position (Indicator light on):**
Interior air is recirculated inside the vehicle.

Press the button to the ON position when:
- driving on a dusty road.
- to prevent traffic fumes from entering passenger compartment.
- for maximum cooling when using the air conditioner.

The air recirculation function does not operate when in the or air flow modes.

**OFF position (Indicator light off):**
Outside air is drawn into the passenger compartment and distributed through the selected outlet.

Use the OFF position for normal heater or air conditioner operation.

Air conditioner button

Start the engine, turn the fan control dial to the desired position and press the button to turn on the air conditioner. To turn off the air conditioner, press the button again.

**The air conditioner cooling function operates only when the engine is running.**

Rear window and outside mirror (if so equipped) defroster switch

For additional information, refer to ‘Rear window and outside mirror (if so equipped) defroster switch’ in the ‘Instruments and controls’ section of this manual.

HEATER OPERATION

**Heating**
This mode is used to direct heated air to the foot outlets. Some air also flows from the defrost outlets and the side vent outlets.

1. Press the button to the OFF position for normal heating.
2. Press the button.
3. Turn the fan control dial to the desired position.
4. Turn the temperature control dial to the desired position between the middle and the hot position.

   - To quickly remove ice or fog from the windows, turn the fan control dial to the highest setting and the temperature control dial to the full HOT position.

**Ventilation**
This mode directs outside air to the side and center vents.

1. Press the button to the OFF position.
2. Press the air flow control button.
3. Turn the fan control dial to the desired position.
4. Turn the temperature control dial to the desired position.

**Defrosting or defogging**
This mode directs the air to the defrost outlets to defrost/defog the windows.

1. Press the defrost/defog button.
2. Turn the fan control dial to the desired position.
3. Turn the temperature control dial to the desired position between the middle and the hot position.

Monitor, climate, audio, phone and voice recognition systems 4-25
When the □ position is selected, the air conditioner automatically turns on if the outside temperature is more than 36°F (2°C). This dehumidifies the air which helps defog the windshield. The □ mode automatically turns off, allowing outside air to be drawn into the passenger compartment to further improve the defogging performance. The recirculation mode cannot be activated in the □ position.

Bi-level heating
The bi-level mode directs warmed air to the side and center vents and to the front and rear floor outlets.

1. Press the □ button to the OFF position.
2. Press the □ air flow control button.
3. Turn the □ fan control dial to the desired position.
4. Turn the temperature control dial to the desired position.

Heating and defogging
This mode heats the interior and defogs the windshield.

1. Press the □ air flow control button.
3. Turn the fan control dial to the desired position.

4. Press the A/C button.

5. Turn the temperature control dial to the desired position.

Dehumidified defogging
This mode is used to defog the windows and dehumidify the air.

1. Press the air flow control button.

2. Turn the fan control dial to the desired position.

- When the or are selected, the air conditioner automatically turns on if the outside temperature is more than 36°F (2°C). This dehumidifies the air which helps defog the windshield. The mode automatically turns off, allowing outside air to be drawn into the passenger compartment to further improve the defogging performance.

- The air conditioner is always on in mode, regardless of whether the indicator light is on or off.

3. Turn the temperature control dial to the desired position.

Operating tips

- Keep the windows and moonroof closed while the air conditioner is in operation.

- After parking in the sun, drive for 2 or 3 minutes with the windows open to vent hot air from the passenger compartment. Then, close the windows. This allows the air conditioner to cool the interior more quickly.

- The air conditioning system should be operated for approximately 10 minutes at least once a month. This helps prevent damage to the system due to lack of lubrication.

- A visible mist may be seen coming from the ventilators in hot, humid conditions as the air is cooled rapidly. This does not indicate a malfunction.

- If the engine coolant temperature gauge indicates engine coolant temperature over the normal range, turn the air conditioner off. For additional information, refer to “If your vehicle overheats” in the “In case of emergency” section of this manual.

AIR FLOW CHARTS
The following charts show the button and dial positions for maximum and quick heating, cooling or defrosting. The air re- circulation button should always be in the OFF position for heating and defrosting.

Monitor, climate, audio, phone and voice recognition systems  4-27
Monitor, climate, audio, phone and voice recognition systems
Monitor, climate, audio, phone and voice recognition systems
Monitor, climate, audio, phone and voice recognition systems
HEATER AND AIR CONDITIONER
(automatic) (if so equipped)

1. Temperature control buttons (driver's side)
2. (front defroster) button
3. rear window and outside mirror defroster switch
4. Display screen
5. MODE (manual air flow control) button
6. Fresh air intake button
7. Air recirculation button
8. Temperature control buttons (passenger's side)
9. DUAL button
10. A/C (air conditioner) button
11. fan control buttons
12. AUTO (automatic) button
13. ON-OFF button

WARNING

• The air conditioner cooling function operates only when the engine is running.
• Do not leave children or adults who would normally require the assistance of others alone in your vehicle. Pets should also not be left alone. They could accidentally injure themselves or others through inadvertent operation of the vehicle. Also, on hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
• Do not use the recirculation mode for long periods as it may cause the interior air to become stale and the windows to fog up.

Start the engine and operate the controls to activate the air conditioner.

Monitor, climate, audio, phone and voice recognition systems 4-31
NOTE:

- Odors from inside and outside the vehicle can build up in the air conditioner unit. Odor can enter the passenger compartment through the vents.
- When parking, set the heater and air conditioner controls to turn off air recirculation to allow fresh air into the passenger compartment. This should help reduce odors inside the vehicle.

AUTOMATIC OPERATION

Cooling and/or dehumidified heating (AUTO)

This mode may be used all year round as the system automatically works to keep a constant temperature. Air flow distribution and fan speed are also controlled automatically.

1. Press the AUTO button on. (The indicator on the button will illuminate and AUTO will be displayed.)
2. Use the temperature control buttons to set the desired temperature.
   - Adjust the temperature display to about 75°F (24°C) for normal operation.
   - The temperature of the passenger compartment will be maintained automatically. Air flow distribution and fan speed are also controlled automatically.
   - A visible mist may be seen coming from the vents in hot, humid conditions as the air is cooled rapidly. This does not indicate a malfunction.
3. You can individually set driver's and front passenger's side temperature using each set of temperature control buttons. When the DUAL button or passenger's side temperature control buttons are pressed, the DUAL indicator will come on. To turn off the passenger's side temperature control, press the DUAL button.

Heating (A/C OFF)

The air conditioner does not activate. When you need to heat only, use this mode.

1. Press the A/C button (A/C indicator will turn off).
2. Use the temperature control buttons to set the desired temperature.
   - The temperature of the passenger compartment will be maintained automatically. Air flow distribution and fan speed are also controlled automatically.
   - Do not set the temperature lower than the outside air temperature or the system may not work properly.
   - Not recommended if windows fog up.

Dehumidified defrosting or defogging

1. Press the front defroster button.
2. Use the temperature control buttons to set the desired temperature.
   - To quickly remove ice from the outside of the windows, use the fan speed control dial to set the fan speed to maximum.
   - As soon as possible after the windshield is clean, press the AUTO button to return to the automatic mode.

4-32  Monitor, climate, audio, phone and voice recognition systems
When the \(\text{front defroster button is pressed, the air conditioner will automatically be turned on at outside temperatures above 36°F (2°C). The air recirculation mode automatically turns off, allowing outside air to be drawn into the passenger compartment to further improve the defogging performance.}

**MANUAL OPERATION**

**Fan speed control**
Press the \(\text{fan control buttons to manually control the fan speed.}
Press the AUTO button to return to automatic control of the fan speed.

**Temperature control**
Press the temperature control buttons \(\text{, \text{ to set the desired temperature.}

**Air recirculation**
Press the air recirculation button \(\text{ to recirculate interior air inside the vehicle.}
Press the AUTO button to return to automatic mode.
The air recirculation cannot be activated when the air conditioner is in the \(\text{front defroster mode.}

**Fresh air intake**
Press the \(\text{ fresh air intake button to draw outside air into the passenger compartment.}

**Automatic intake air control**
In the AUTO mode, the intake air will be controlled automatically. To manually control the intake air, press the \(\text{ air recirculation button.}
To return to the automatic control mode, press and hold the \(\text{ air recirculation button for about 2 seconds. The indicator lights (both air recirculation and fresh air intake buttons) will flash twice and then the intake air will be controlled automatically.}

**Air conditioner button**
Start the engine, press the \(\text{ fan control buttons to the desired position and press the \(\text{ button to turn on the air conditioner. To turn off the air conditioner, press the \(\text{ button again.}

**Air flow control**
Pressing the MODE button manually controls air flow and selects the air outlet:

- Air flows from center and side vents.
- Air flows from center and side vents and foot outlets.
- Air flows mainly from foot outlets.
- Air flows from defroster and foot outlets.

To turn system off
Press the ON-OFF button.

**Rear window and outside mirror**
For additional information, refer to “Rear window and outside mirror (if so equipped) defroster switch” in the “Instruments and controls” section of this manual.
OPERATING TIPS

The sunload sensor, located on the top passenger’s side of the instrument panel, helps the system maintain a constant temperature. Do not put anything on or around this sensor.

- When the engine coolant temperature and outside air temperature are low, the air flow from the foot outlets may not operate for a maximum of 150 seconds. However, this is not a malfunction. After the coolant temperature warms up, air flow from the foot outlets will operate normally.

SERVICING AIR CONDITIONER (if so equipped)

The air conditioner system in your NISSAN vehicle is charged with a refrigerant designed with the environment in mind.

**This refrigerant does not harm the earth's ozone layer.**

Special charging equipment and lubricant is required when servicing your NISSAN air conditioner. Using improper refrigerants or lubricants will cause severe damage to your air conditioner system. For additional information, refer to “Air conditioner system (if so equipped) refrigerant and oil recommendations” in the “Technical and consumer information” section of this manual.

It is recommended that you visit a NISSAN dealer to service your “environmentally friendly” air conditioning system.

**WARNING**

The air conditioner system contains refrigerant under high pressure. To avoid personal injury, any air conditioner service should be done only by an experienced technician with proper equipment.

AUDIO SYSTEM

RADIO

With the ignition placed in the ACC or ON position, press the O (power ON) or ON-OFF button to turn the radio on. If you listen to the radio with the engine not running, the ignition should be placed in the ACC position.

Radio reception is affected by station signal strength, distance from radio transmitter, buildings, bridges, mountains and other external influences. Intermittent changes in reception quality normally are caused by these external influences.

**Using a cellular phone in or near the vehicle may influence radio reception quality.**

Radio reception

Your NISSAN radio system is equipped with state-of-the-art electronic circuits to enhance radio reception. These circuits are designed to extend reception range, and to enhance the quality of that reception.

However, there are some general characteristics of both FM and AM radio signals that can affect radio reception quality in a moving vehicle, even when the finest equipment is used. These characteristics are completely normal in a given reception...
area and do not indicate any malfunction in your NISSAN radio system.

Reception conditions will constantly change because of vehicle movement. Buildings, terrain, signal distance and interference from other vehicles can work against ideal reception. Described below are some of the factors that can affect your radio reception.

Some cellular phones or other devices may cause interference or a buzzing noise to come from the audio system speakers. Storing the device in a different location may reduce or eliminate the noise.

**FM RADIO RECEPTION**

Range: FM range is normally limited to 25 – 30 mi (40 – 48 km), with monaural (single channel) FM having slightly more range than stereo FM. External influences may sometimes interfere with FM station reception even if the FM station is within 25 mi (40 km). The strength of the FM signal is directly related to the distance between the transmitter and receiver. FM signals follow a line-of-sight path, exhibiting many of the same characteristics as light. For example, they will reflect off objects. Fade and drift: As your vehicle moves away from a station transmitter, the signals will tend to fade and/or drift.

Static and flutter: During signal interference from buildings, large hills or due to antenna position (usually in conjunction with increased distance from the station transmitter), static or flutter can be heard. This can be reduced by adjusting the treble control to reduce treble response.

Multipath reception: Because of the reflective characteristics of FM signals, direct and reflected signals reach the receiver at the same time. The signals may cancel each other, resulting in momentary flutter or loss of sound.

**AM RADIO RECEPTION**

AM signals, because of their low frequency, can bend around objects and skip along the ground. In addition, the signals can be bounced off the ionosphere and bent back to earth. Because of these characteristics, AM signals are also subject to interference as they travel from transmitter to receiver.

Fading: Occurs while the vehicle is passing through freeway underpasses or in areas with many tall buildings. It can also occur for several seconds during ionospheric turbulence even in areas where no obstacles exist.

Static: Caused by thunderstorms, electrical power lines, electric signs and even traffic lights.

**SATELLITE RADIO RECEPTION (if so equipped)**

When the satellite radio is used for the first time or the battery has been replaced, the satellite radio may not work properly. This is not a malfunction. Wait more than 10 minutes with satellite radio ON and the vehicle outside of any metal or large building for satellite radio to receive all of the necessary data.

No satellite radio reception is available and “NO SAT” or “No Signal” is displayed when the SAT band option is selected unless optional satellite receiver and antenna are installed and a SiriusXM® Satellite Radio service subscription is active. Satellite radio is not available in Alaska, Hawaii and Guam.

Satellite radio performance may be affected if cargo carried on the roof blocks the satellite radio signal.

Monitor, climate, audio, phone and voice recognition systems 4-35
If possible, do not put cargo over the satellite antenna.

A build up of ice on the satellite radio antenna can affect satellite radio performance. Remove the ice to restore satellite radio reception.

**Compact disc (CD) player**

- **CAUTION**
  - Do not force a compact disc into the CD insert slot. This could damage the CD and/or CD player.
  - Trying to load a CD with the CD door closed could damage the CD and/or CD player.
  - Only one CD can be loaded into the CD player at a time.
  - Only use high quality 4.7 in (12 cm) round discs that have the "COMPACT disc DIGITAL AUDIO" logo on the disc or packaging.
  - During cold weather or rainy days, the player may malfunction due to the humidity. If this occurs, remove the CD and dehumidify or ventilate the player completely.
  - The player may skip while driving on rough roads.
  - The CD player sometimes cannot function when the compartment temperature is extremely high or low. Decrease/increase the temperature before use.
• Do not expose the CD to direct sunlight.
• CDs that are in poor condition or are dirty, scratched or covered with fingerprints may not work properly.
• The following CDs may not work properly:
  • Copy control compact discs (CCCD)
  • Recordable compact discs (CD-R)
  • Rewritable compact discs (CD-RW)
• Do not use the following CDs as they may cause the CD player to malfunction:
  • 3.1 in (8 cm) discs with an adapter
  • CDs that are not round
  • CDs with a paper label
  • CDs that are warped, scratched, or have abnormal edges
• This audio system can only play pre-recorded CDs. It has no capability to record or burn CDs.
• If the CD cannot be played, one of the following messages will be displayed.

CHECK DISC
• Confirm that the CD is inserted correctly (the label side is facing up, etc.).
• Confirm that the CD is not bent or warped and it is free of scratches.

PRESS EJECT
This is an error due to excessive temperature inside the player. Remove the CD by pressing the EJECT button. After a short time, reinsert the CD. The CD can be played when the temperature of the player returns to normal.

UNPLAYABLE
The file is unplayable in this audio system (only MP3 or WMA CD).

Compact disc with MP3 or WMA

Terms
• MP3 — MP3 is short for Moving Pictures Experts Group Audio Layer 3. MP3 is the most well-known compressed digital audio file format. This format allows for near “CD quality” sound, but at a fraction of the size of normal audio files. MP3 conversion of an audio track from CD-ROM can reduce the file size by approximately a 10:1 ratio with virtually no perceptible loss in quality. MP3 compression removes the redundant and irrelevant parts of a sound signal that the human ear doesn’t hear.
• WMA — Windows Media Audio (WMA)* is a compressed audio format created by Microsoft as an alternative to MP3. The WMA codec offers greater file compression than the MP3 codec, enabling storage of more digital audio tracks in the same amount of space when compared to MP3s at the same level of quality.
• Bit rate — Bit rate denotes the number of bits per second used by a digital music file. The size and quality of a compressed digital audio file is determined by the bit rate used when encoding the file.

• Sampling frequency — Sampling frequency is the rate at which the samples of a signal are converted from analog to digital (A/D conversion) per second.

• Multisession — Multisession is one of the methods for writing data to media. Writing data once to the media is called a single session, and writing more than once is called a multisession.

• ID3/WMA Tag — The ID3/WMA tag is the part of the encoded MP3 or WMA file that contains information about the digital music file such as song title, artist, encoding bit rate, track time duration, etc. ID3 tag information is displayed on the Artist/song title line on the display.

* Windows® and Windows Media® are registered trademarks and trademarks in the United States of America and other countries of Microsoft Corporation of the USA.

• The names of folders not containing MP3 or WMA files are not shown in the display.

• If there is a file in the top level of the disc, “Root Folder” is displayed.

• The playback order is the order in which the files were written by the writing software. Therefore, the files might not play in the desired order.
### Specification chart

<table>
<thead>

#### Tag information

ID3 tag VER1.0, VER1.1, VER2.2, VER2.3 (MP3 only)

#### Folder levels

Folder levels: 8, Max folders: 255 (including root folder), Files: 512 (Max. 255 files for one folder)

#### Text character number limitation

128 characters

#### Displayable character codes*2

01: ASCII, 02: ISO-8859-1, 03: UNICODE (UTF-16 BOM Big Endian), 04: UNICODE (UTF-16 Non-BOM Big Endian), 05: UNICODE (UTF-8), 06: UNICODE (Non-UTF-16 BOM Little Endian)

---

*1 Files created with a combination of 48 kHz sampling frequency and 64 kbps bit rate cannot be played.

*2 Available codes depend on what kind of media, versions and information are going to be displayed.
## Troubleshooting guide

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Countermeasure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cannot play</td>
<td>Check if the disc was inserted correctly.</td>
</tr>
<tr>
<td></td>
<td>Check if the disc is scratched or dirty.</td>
</tr>
<tr>
<td></td>
<td>Check if there is condensation inside the player. If there is, wait until the condensation is gone (about 1 hour) before using the player.</td>
</tr>
<tr>
<td></td>
<td>If there is a temperature increase error, the CD player will play correctly after it returns to the normal temperature.</td>
</tr>
<tr>
<td></td>
<td>If there is a mixture of music CD files (CD-DA data) and MP3/WMA files on a CD, only the music CD files (CD-DA data) will be played.</td>
</tr>
<tr>
<td></td>
<td>Files with extensions other than “.MP3”, “.WMA”, “.mp3” or “.wma” cannot be played. In addition, the character codes and number of characters for folder names and file names should be in compliance with the specifications.</td>
</tr>
<tr>
<td></td>
<td>Check if the finalization process, such as session close and disc close, is done for the disc.</td>
</tr>
<tr>
<td></td>
<td>Check if the disc is protected by copyright.</td>
</tr>
<tr>
<td>Poor sound quality</td>
<td>Check if the disc is scratched or dirty.</td>
</tr>
<tr>
<td>It takes a relatively long time before the music starts playing.</td>
<td>If there are many folders or file levels on the MP3/WMA disc, or if it is a multisession disc, some time may be required before the music starts playing.</td>
</tr>
<tr>
<td>Music cuts off or skips</td>
<td>The writing software and hardware combination might not match, or the writing speed, writing depth, writing width, etc., might not match the specifications. Try using the slowest writing speed.</td>
</tr>
<tr>
<td>Skipping with high bit rate files</td>
<td>Skipping may occur with large quantities of data, such as for high bit rate data.</td>
</tr>
<tr>
<td>Moves immediately to the next song when playing</td>
<td>when a non-MP3/WMA file has been given an extension of “.MP3”, “.WMA”, “.mp3” or “.wma”, or when play is prohibited by copyright protection, there will be approximately 5 seconds of no sound and then the player will skip to the next song.</td>
</tr>
<tr>
<td>Songs do not play back in the desired order</td>
<td>The playback order is the order in which the files were written by the writing software. Therefore, the files might not play in the desired order.</td>

</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>∙ Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.</td>
</tr>
<tr>
<td>∙ Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.</td>
</tr>
<tr>
<td>∙ Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.</td>
</tr>
</tbody>
</table>

The vehicle is not equipped with a USB device. USB devices should be purchased separately as necessary.

This system cannot be used to format USB memory devices. To format a USB device, use a personal computer.

In some jurisdictions, the USB device for the front seats plays only sound without images for regulatory reasons, even when the vehicle is parked.

This system supports various USB memory devices, USB hard drives and iPod® players. Some USB devices may not be supported by this system.

- Partitioned USB devices may not play correctly.
- Some characters used in other languages (Chinese, Japanese, etc.) may not appear properly in the display. Using English language characters with a USB device is recommended.

**General notes for USB use**

- For additional information, refer to your device manufacturer’s owner information regarding the proper use and care of the device.

**Notes for iPod® use**

iPod® is a trademark of Apple Inc., registered in the U.S. and other countries.

- Improperly plugging in the iPod® may cause a check mark to be displayed on and off (flickering). Always make sure that the iPod® is connected properly.
- An iPod® nano (1st Generation) may remain in fast forward or rewind mode if it is connected during a seek operation. In this case, please manually reset the iPod®.
- An iPod® nano (2nd Generation) will continue to fast-forward or rewind if it is disconnected during a seek operation.
- An incorrect song title may appear when the Play Mode is changed while using an iPod® nano (2nd Generation).
- Audiobooks may not play in the same order as they appear on an iPod®.
- Large video files cause slow responses in an iPod®. The vehicle center display may momentarily black out, but will soon recover.
- If an iPod® automatically selects large video files while in the shuffle mode, the vehicle center display may momentarily black out, but will soon recover.
Bluetooth® streaming audio

- Some Bluetooth® audio devices may not be recognized by the in-vehicle audio system.
- It is necessary to set up the wireless connection between a compatible Bluetooth® audio device and the in-vehicle Bluetooth® module before using the Bluetooth® audio.
- Operating procedure of the Bluetooth® audio will vary depending on the devices. Make sure how to operate your audio device before using it with this system.
- The Bluetooth® audio may be stopped under the following conditions:
  - Receiving a call on the Hands-Free Phone System.
  - Checking the connection to the hands-free phone.
  - Do not place the Bluetooth® audio device in an area surrounded by metal or far away from the in-vehicle Bluetooth® module to prevent tone quality degradation and wireless connection disruption.
- While an audio device is connected through the Bluetooth® wireless connection, the battery power of the device may discharge quicker than usual.
- This system supports the Bluetooth® Audio Distribution Profile (A2DP, AVRCP).

BLUETOOTH® is a trademark owned by Bluetooth SIG, Inc. and licensed to Visteon and Bosch.

Bass, treble, balance and fade can also be adjusted by pressing the ENTER/SETTING button and turning the TUNE/FOLDER control knob to select the item to adjust. When the desired item is shown on the display, turn the tuning to adjust and then press the ENTER/SETTING button until the display returns to the main audio screen. If the button is not pressed for approximately 10 seconds, the radio or CD display will automatically reappear.

---

4-44  **Monitor, climate, audio, phone and voice recognition systems**
Clock Set
1. Press the ENTER/SETTING button.
2. Turn the TUNE/FOLDER knob to select CLOCK.
3. Press the ENTER/SETTING button.
4. Turn the TUNE/FOLDER knob to select "set time".
5. Press the ENTER/SETTING button.
6. Turn the TUNE/FOLDER knob to adjust hours.
7. Press the ENTER/SETTING button.
8. Turn the TUNE/FOLDER knob to adjust minutes.
9. Press the ENTER/SETTING button.
10. Press the BACK button to finish.

iPod MENU button
This button can only be used for iPod® operations. For additional information, refer to "iPod® player operation without Navigation System" in this section.

 DISP (display) button
Press the DISP (display) button while a CD is playing to change the text shown in the audio display as follows:
For CDs:
Running Time → Album Title: → Artist Name: → Song Title
For MP3 CDs:
Running Time → Folder Title: → Album Title: → Artist Name: → Song Title:
If the text information is too long to fully be displayed on the screen, press and hold the DISP button for longer than 1.5 seconds to scroll through the rest of the text.
Press the DISP (display) button while the radio is playing to toggle the audio display between station number and RDS.

MEDIA button
Press the MEDIA button to toggle between different media options connected to the system.

 BACK button
Press the BACK button to return to the previous menu screen.

FM/AM radio operation
FM-AM button
Press the FM-AM button to change the band as follows:
AM → FM1 → FM2 → AM
If another audio source is playing when the FM-AM button is pressed, the audio source playing will automatically be turned off and the last radio station played will begin playing.

TUNE/FOLDER knob tuning
Turn the TUNE/FOLDER knob to the left or right for manual tuning.

 SEEK tuning
Press the SEEK/TRACK button ◀ or ▶ to tune from low to high or high to low frequencies and to stop at the next broadcasting station.

SCAN tuning
Press the SCAN button to stop at each broadcasting station for 5 seconds. SCAN will appear on the screen while the radio is scan tuning.
Pressing the button again during this 5 second period will stop SCAN tuning and the radio will remain tuned to that station. If the SCAN button is not pressed within 5 seconds, SCAN tuning moves to the next station.

1 to 6 Station memory operations

Twelve stations can be set for the FM band (6 for FM1, 6 for FM2) and six stations can be set for the AM band.

1. Choose the radio band AM, FM1 or FM2 using the AM or FM button.
2. Tune to the desired station using manual, SEEK or SCAN tuning. Press and hold any of the desired station memory buttons (1 – 6) until a beep sound is heard.
3. The channel indicator will then come on and the sound will resume. Programming is now complete.
4. Other buttons can be set in the same manner.

If the battery cable is disconnected or if the fuse opens, the radio memory will be canceled. In that case, reset the desired stations.

Compact disc (CD) player operation

If the radio is already operating, it automatically turns off and the compact disc begins to play.

CD button

When the CD button is pressed with a compact disc loaded and the radio playing, the radio turns off and the last used compact disc starts to play.

CD/MP3 display mode

While listening to an MP3/WMA CD, certain text may be displayed on the screen if the CD has been encoded with text information. Depending on how the MP3/WMA CD is encoded, information such as Artist, Song and Folder will be displayed.

The track number and the total number of tracks in the current folder or on the current disc are displayed on the screen as well.

SEEK/TRACK (Reverse or Fast Forward) button

Press and hold the SEEK/TRACK button 
 or 
 for 1.5 seconds while the compact disc is playing to reverse or fast forward the track being played. The compact disc plays at an increased speed while reversing or fast forwarding. When the button is released, the compact disc returns to normal play speed.

SEEK/TRACK button

Press the SEEK/TRACK button 
 while a CD or MP3/WMA CD is playing to return to the beginning of the current track. Press the SEEK/TRACK button 
 several times to skip backward several tracks.

Press the SEEK/TRACK button 
 while a CD or MP3/WMA CD is playing to advance one track. Press the SEEK/TRACK button 
 several times to skip forward several tracks. If the last track on a CD is skipped, the first track on the disc is played. If the last track in a folder of an MP3/WMA CD is skipped, the first track of the next folder is played.

TUNE/FOLDER knob (MP3/WMA CD only)

If an MP3/WMA CD with multiple folders is playing, turn the TUNE/FOLDER knob to change folders. Turn the knob to the left to skip back a folder. Turn the knob to the right to skip ahead a folder.

Monitor, climate, audio, phone and voice recognition systems
RPT (repeat) button
When the RPT button is pressed while a compact disc is playing, the play pattern can be changed as follows:
CD:
1 Track Repeat  → OFF
CD with MP3 or WMA:
1 Folder Repeat → 1 Track Repeat  → OFF
1 Track Repeat: the current track will be repeated.
1 Folder Repeat: the current folder will be repeated.
OFF: No repeat play pattern is applied. The indicator on the display will turn off.
The current play pattern of the CD is displayed on the screen unless no pattern is applied.

RDM (random) button
When the RDM button is pressed while a compact disc is playing, the play pattern can be changed as follows:
CD:
1 Disc Random  → OFF
CD with MP3 or WMA:
1 Disc Random  → 1 Folder Random  → OFF
1 Disc Random: all tracks on the disc will be played randomly.
1 Folder Random: all tracks in the current folder will be played randomly.
OFF: No random play pattern is applied. The indicator on the display will turn off.
The current play pattern of the CD is displayed on the screen unless no pattern is applied.

CD EJECT
When the CD eject button is pressed with a compact disc loaded, the compact disc will be ejected.
When the CD eject button is pressed while the compact disc is playing, the compact disc will eject and the system will turn off.

Additional features

This button can only be used for iPod® operations. For additional information, refer to ‘iPod® player operation without Navigation System’ in this section.

FM/AM/SAT radio operation

FM-AM button
Press the FM-AM button to change the band as follows:
AM → FM1 → FM2 → AM
If another audio source is playing when the FM-AM button is pressed, the audio source playing will automatically be turned off and the last radio station played will begin playing.

XM band select
Press the XM button to change the band as follows:
XM1* → XM2* → XM3* → XM1 (satellite, if so equipped)
When the XM button is pressed while the ignition switch is in the ACC or ON position, the radio will come on at the station last played.

The last station played will also come on when the (power) button is pressed on.
*When the XM button is pressed, the satellite radio reception will not be available unless an optional satellite receiver and antenna are installed and a SiriusXM® Satellite Radio service subscription is active. Satellite radio is not available in Alaska, Hawaii and Guam.
If a compact disc is playing when the XM button is pressed, the compact disc will automatically be turned off and the last radio station played will come on.

TUNE/FOLDER knob (Tuning)
Turn the TUNE/FOLDER knob to the left or right for manual tuning.

SEEK tuning
Press the SEEK button or TRACK button to tune from low to high or high to low frequencies and to stop at the next broadcasting station.
SCAN tuning

Press the SCAN button to stop at each broadcasting station for 5 seconds. SCAN will appear on the screen while the radio is scan tuning.

Pressing the button again during this 5 second period will stop SCAN tuning and the radio will remain tuned to that station. If the SCAN button is not pressed within 5 seconds, SCAN tuning moves to the next station.

1 to 6 Station memory operations

Six stations can be set for the AM band. Twelve stations can be set for the FM band (6 for FM1, 6 for FM2). Eighteen channels can be set for the satellite radio (6 for XM1, 6 for XM2, 6 for XM3).

1. Choose the radio band AM, FM1 or FM2 using the FM/AM select button, or choose the satellite band XM1, XM2 or XM3 using the XM button.
2. Tune to the desired station using manual, SEEK or SCAN tuning. Press and hold any of the desired station memory buttons (1 - 6) until the preset number is updated on the display and the sound is briefly muted.
3. The channel indicator will then come on and the sound will resume. Programming is now complete.
4. Other buttons can be set in the same manner.

If the battery cable is disconnected, or if the fuse opens, the radio memory will be canceled. In that case, reset the desired stations.

Compact disc (CD) player operation

1. If the radio is already operating, it automatically turns off and the compact disc begins to play.
2. With a CD loaded, press the MEDIA button until the CD mode is displayed on the screen.

CD/MP3 display mode

While listening to an MP3/WMA CD, certain text may be displayed on the screen if the CD has been encoded with text information. Depending on how the MP3/WMA CD is encoded, information such as Artist, Song and Folder will be displayed.

The track number and the total number of tracks in the current folder or on the current disc are displayed on the screen as well.

.Seek/CAT button

Press the SEEK/CAT button while a CD or MP3/WMA CD is playing to return to the beginning of the current track. Press the SEEK/CAT button several times to skip backward several tracks.

Press the SEEK/CAT button while a CD or MP3/WMA CD is playing to advance one track. Press the SEEK/CAT button several times to skip forward several tracks. If the last track on a CD is skipped, the first track on the disc is played. If the last

Monitor, climate, audio, phone and voice recognition systems  4-51
track in a folder of an MP3/WMA CD is skipped, the first track of the next folder is played.

**TUNE/SCROLL knob (MP3/WMA CD only)**

If a MP3/WMA CD with multiple folders is playing, turn the TUNE/SCROLL knob to change folders. Turn the knob to the left to skip back a folder. Turn the knob to the right to skip ahead a folder.

**RPT (repeat) button**

When the RPT button is pressed while a compact disc is playing, the play pattern can be changed as follows:

**CD:**
- 1 Track Repeat → OFF
- 1 Folder Repeat → 1 Track Repeat → OFF
- 1 Track Repeat: the current track will be repeated.
- 1 Folder Repeat: the current folder will be repeated.
- OFF: No repeat play pattern is applied. The indicator on the display will turn off.

The current play pattern of the CD is displayed on the screen unless no pattern is applied.

**RDM (random) button**

When the RDM button is pressed while a compact disc is playing, the play pattern can be changed as follows:

**CD:**
- 1 Disc Random → OFF
- 1 Disc Random: all tracks on the disc will be played randomly.

**CD with MP3 or WMA:**
- 1 Disc Random → 1 Folder Random → OFF
- 1 Disc Random: all tracks on the disc will be played randomly.
- 1 Folder Random: all tracks in the current folder will be played randomly.
- OFF: No random play pattern is applied. The indicator on the display will turn off.

The current play pattern of the CD is displayed on the screen unless no pattern is applied.

**EJECT button**

When the button is pressed twice with a compact disc loaded, the compact disc will be ejected further for easier CD removal. If the disc is not removed within 20 seconds, the disc will reload.

**Additional features**

For additional information, refer to “iPod® player operation without Navigation System” in this section.

For additional information, refer to “USB (Universal Serial Bus) connection port (models without Navigation System)” in this section.

</tbody>
</table>

Bass, treble, balance and fade can also be adjusted by pressing the AUDIO button and turning the TUNE knob to select the item to adjust. When the desired item is shown on the display, turn the TUNE knob to adjust and then press the AUDIO button to select. Press the BACK button until the display returns to the main audio screen.
BACK button
Pressing the BACK button will return the user to the previous menu.

SXM settings
To view the SXM settings:
1. Press the [APPs] button.
2. Touch the “Settings” key.
3. Touch the “SXM” key.
The signal strength, activation status and other information are displayed on the screen.

FM/AM/SAT radio operation

FM·AM button
Press the FM·AM button to change the band as follows:
AM → FM1 → FM2 → AM
If another audio source is playing when the FM·AM button is pressed, the audio source playing will automatically be turned off and the last radio station played will begin playing.
The FM stereo indicator (ST) is shown on the screen during FM stereo reception. When the stereo broadcast signal is weak, the radio automatically changes from stereo to monaural reception.

SXM band select
Pressing the SXM button will change the band as follows:
SXM1* → SXM2* → SXM3* → SXM1* (satellite, if so equipped)
When the SXM button is pressed while the ignition switch is in the ACC or ON position, the radio will come on at the last station played.
The last station played will also come on when the ON-OFF button is pressed to turn the radio on.
*When the SXM button is pressed, the satellite radio mode will be skipped unless an optional satellite receiver and antenna are installed and a SiriusXM® Satellite Radio service subscription is active. Satellite radio is not available in Alaska, Hawaii and Guam.
If a compact disc is playing when the SXM button is pressed, the compact disc will automatically be turned off and the last radio station played will come on.
While the radio is in SXM mode, the operation can be controlled through the touch-screen. Touch the “Categories” key to display a list of categories. Touch a category displayed on the list to display options within that category.

Tuning with the touch-screen
When in AM or FM mode, the radio can be tuned using the touch-screen. To bring up the visual tuner, touch the “Tune” key on the lower right corner of the screen. A screen appears with a bar running from low frequencies on the left to high frequencies on the right. Touch the screen at the location of the frequency you wish to tune and the station will change to that frequency. To return to the regular radio display screen, touch the “OK” key.

Tuning with the TUNE knob
The radio can also be manually tuned using the TUNE knob. When in FM or AM mode, turn the TUNE knob to the left for lower frequencies or to the right for higher frequencies. When in SXM mode, turn the TUNE knob to change the channel.

SEEK tuning
When in AM or FM mode, press the seek buttons or to tune from low to high or high to low frequencies and to stop at the next broadcasting station.
When in SXM mode, press the seek buttons or to change the category.
1 to 6 Station memory operations

Twelve stations can be set for the FM band (6 for FM1, 6 for FM2) and 6 stations can be set for the AM band. Eighteen stations can be set for the SXM band (6 for SXM1, 6 for SXM2, 6 for SXM3).

1. Choose the radio band AM, FM1 or FM2 using the FM·AM button or choose the radio band SXM1, SXM2, SXM3 using the SXM button.

2. Tune to the desired station using manual or seek tuning. Press and hold any of the desired station memory (1 – 6) until a beep sound is heard.

3. The channel indicator will then come on and the sound will resume. Programming is now complete.

4. Other buttons can be set in the same manner.

If the battery cable is disconnected or if the fuse opens, the radio memory will be canceled. In that case, reset the desired stations.

Presets can also be selected by touching the desired preset number on the screen.

Smart Favorites Preset Setup (if so equipped)

The Smart Favorites feature allows the user to designate presets, within the SXM1, SXM2 and SXM3 bands, as their Smart Favorites. When any of the Smart Favorite presets are selected, the current track on that station will play from the beginning of the song.
To program a Smart Favorite preset:

1. Press the SXM button.
2. Touch the “Setup” key.
3. Touch the “Tune Start” key to activate (ON) or deactivate (OFF) Smart Favorites.
4. Touch the ‘Add Preset’ key to select an available preset.

For additional information regarding preset memory options, refer to “1 to 6 station memory operations” in this section.

NOTE:
- Smart Favorites will start functioning only after the audio unit is turned on for a few minutes.
- Tune Start is supported for music channels only.

Replay Screen
The Replay Screen gives the user the ability to replay, skip, pause or rewind the currently aired track.

When the ‘Replay’ key is touched, the Replay Screen is prompted.

To replay a track from the beginning, press the ‹➔ seek key. The user can continue to press the ‹➔ seek key to replay previous songs, but can only go back as far as the system permits. The system will warn the user when they cannot skip any further back by displaying “At the End” in the bottom left corner of the screen.

To skip a track, press the ‹➔ seek key. “Live” will appear in the bottom left corner of the screen indicating the difference from play time to live audio.
PAUSE
To pause a track, press the pause key.

REWIND/FAST FORWARD
To rewind/fast forward a track, hold the 

Compact disc (CD) player operation
If the radio is already operating, it automatically turns off and the compact disc begins to play.

CD button
When the CD button is pressed with the system off and the compact disc loaded, the system will turn on and the compact disc will start to play.

When the CD button is pressed with a compact disc loaded and the radio playing, the radio will automatically be turned off and the compact disc will start to play.

If an MP3 CD is playing, touching the ‘Browse’ key will also list the folders on the disc. Follow the procedure for selecting a song with the touch-screen to choose a file.</td>
</tr>
</tbody>
</table>
SEEK (Reverse or Fast Forward) buttons

Press and hold the SEEK buttons ‹‹ or ‹› for 1.5 seconds while the compact disc is playing to reverse or fast forward the track being played. The compact disc plays at an increased speed while reversing or fast forwarding. When the button is released, the compact disc returns to normal play speed.

SEEK buttons

Press the SEEK button ‹‹ while a CD or MP3/WMA CD is playing to return to the beginning of the current track. Press the SEEK button ‹‹ several times to skip backward several tracks.

Press the SEEK button ‹› while a CD or MP3/WMA CD is playing to advance one track. Press the SEEK button ‹› several times to skip forward several tracks. If the last track on a CD is skipped, the first track on the disc is played. If the last track in a folder of an MP3/WMA CD is skipped, the first track of the next folder is played.

AUX button

The AUX IN audio input jack accepts any standard analog audio input such as from a portable cassette tape/CD player, MP3 player or a laptop computer. Press the AUX button to play a compatible device plugged into the AUX IN jack.

CD EJECT button

When the CD EJECT button is pressed with a compact disc loaded, the compact disc will eject and the last source will be played. If the disc is not removed within 10 seconds, the disc will reload.

Additional features

For additional information, refer to ‘iPod® player operation with Navigation System’ in this section.

For additional information, refer to ‘USB (Universal Serial Bus) Connection Port (models with Navigation System)’ in this section.

For additional information, refer to ‘Bluetooth® streaming audio with Navigation System’ in this section.

USB (Universal Serial Bus) CONNECTION PORT (models without Navigation System) (if so equipped)

Connecting a device to the USB connection port

WARNING

Do not connect, disconnect, or operate the USB device while driving. Doing so can be a distraction. If distracted you could lose control of your vehicle and cause an accident or serious injury.
For additional information, refer to your device manufacturer’s owner information regarding the proper use and care of the device.

The USB port is located in the center console. Insert the USB device into the connection port ①.

When a compatible storage device is plugged into the connection port, compatible audio files on the storage device can be played through the vehicle’s audio system.

Audio file operation

MEDIA button (if so equipped)
Place the ignition switch in the ON or ACC position and press the MEDIA button to switch to the USB input mode. If a CD is playing or another audio source is plugged in through the AUX IN jack located in the center console, the MEDIA button toggles between the three sources.

Play information
Information about the audio files being played can be displayed on the display screen of the vehicle’s audio system. Depending on how the audio files are encoded, information such as Folder, Song and Artist will be displayed.

The track number and number of total tracks in the folder are displayed on the screen as well.

Seek/CAT or TRACK (Reverse or Fast Forward) buttons

Press and hold the ❯ or SEEK/CAT or TRACK buttons for 1.5 seconds while an audio file on the USB device is playing to reverse or fast forward the track being played. The track plays at an increased speed while reversing or fast forwarding. When the button is released, the audio file returns to normal play speed.

Seek/CAT or TRACK buttons

Press the SEEK/CAT or TRACK button ❯ while an audio file on the USB device is playing to return to the beginning of the current track. Press the SEEK/CAT or TRACK button ❯ several times to skip backward several tracks.

Press the SEEK/CAT or TRACK button ❯ while an audio file on the USB device is playing to advance one track. Press the SEEK/CAT or TRACK button ❯ several times to skip forward several tracks. If the last track in a folder on the USB device is skipped, the first track of the next folder is played.

RDM (random) button

When the RDM button is pressed while an audio file on the USB device is playing, the play pattern can be changed as follows:

All Random → 1 Folder Random → OFF
All Random: all tracks on the USB device will be played randomly.
1 Folder Random: all tracks in the current folder will be played randomly.
OFF: No random play pattern is applied. The indicator on the display will turn off.
The current play pattern of the USB device is displayed on the screen unless no pattern is applied.

RPT (repeat) button
When the RPT button is pressed while an audio file on the USB device is playing, the play pattern can be changed as follows:
1 Folder Repeat → 1 Track Repeat → OFF
1 Track Repeat: the current track will be repeated.
1 Folder Repeat: the current folder will be repeated.
OFF: No repeat play pattern is applied. The indicator on the display will turn off.
The current play pattern of the USB device is displayed on the screen unless no pattern is applied.

TUNE/FOLDER or TUNE/SCROLL knob
If there are multiple folders with audio files on the USB device, turn the TUNE/FOLDER or TUNE/SCROLL knob to change folders.
Turn the knob to the left to skip back a folder. Turn the knob to the right to skip ahead a folder. If there is only one folder of audio files on the USB device, turning the TUNE/FOLDER or TUNE/SCROLL knob in either direction will return to the first track on the USB device.

USB (Universal Serial Bus) CONNECTION PORT (models with Navigation System) (if so equipped)
Connecting a device to the USB connection port

WARNING
Do not connect, disconnect, or operate the USB device while driving. Doing so can be a distraction. If distracted you could lose control of your vehicle and cause an accident or serious injury.
CAUTION

- Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.
- Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.
- Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.

For additional information, refer to your device manufacturer’s owner information regarding the proper use and care of the device.

The USB port is located in the center console. Insert the USB device into the connection port ①.

When a compatible storage device is plugged into the connection port, compatible audio files on the storage device can be played through the vehicle’s audio system.

Audio file operation

AUX (auxiliary) button

Place the ignition switch in the ON or ACC position and press the AUX button to switch to the USB input mode. If another audio source is playing and a USB memory device is inserted, press the AUX button until the center display changes to the USB memory mode.

If the system has been turned off while the USB memory was playing, press the ON-OFF button to restart the USB memory.

Play information

Information about the audio files being played is shown on the display screen of the vehicle’s audio system. Touch “Browse” to display the list of categories that can be used to narrow the search. Touch the name of a song on the screen to begin playing that song.
SEEK buttons

Press the ⏪ button while an audio file on the USB device is playing to return to the beginning of the current track. Press the ⏪ button several times to skip backward several tracks.

Press the ⏪ button while an audio file on the USB device is playing to advance one track. Press the ⏪ button several times to skip forward several tracks. If the last track in a folder on the USB device is skipped, the first track of the next folder is played.

Random and repeat play mode

While files on a USB device are playing, the play pattern can be altered so that songs are repeated or played randomly.

Random

Touch the “Random” key to apply a random play pattern to the USB device. When the Random mode is active, the text “Random” on the key will illuminate and the text “Random Folder” appears. By touching the “Random” key once more, the text “Random All” appears. To cancel Random mode, touch the “Random” key until no text is illuminated.

Repeat

Touch the “Repeat” key to apply a repeat play pattern to the USB device. When the Repeat mode is active, the text on the “Repeat” key will illuminate and the text “Repeat Track” appears. By touching the “Repeat” key once more, the text “Repeat Folder” appears. To cancel Repeat mode, touch the “Repeat” key until no text is illuminated.

WARNING

Do not connect, disconnect or operate the USB device while driving. Doing so can be a distraction. If distracted you could lose control of your vehicle and cause an accident or serious injury.
CAUTION

• Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.

• Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.

• Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.

For additional information, refer to your device manufacturer’s owner information regarding the proper use and care of the device.

To connect an iPod® to the vehicle so that the iPod® can be controlled with the audio system controls and display screen, use the USB connection port located in the center console. Connect the iPod®-specific end of the cable to the iPod® and the USB end of the cable to the USB connection port on the vehicle. If your iPod® supports charging via a USB connection, its battery will be charged while connected to the vehicle with the ignition switch in the ACC or ON position.

While connected to the vehicle, the iPod® may only be able to be operated by the vehicle audio controls.

To disconnect the iPod® from the vehicle, remove the USB end of the cable from the USB connection port on the vehicle, then remove the cable from the iPod®.

* iPod® is a trademark of Apple Inc., registered in the U.S. and other countries.

Compatibility

The following models are compatible:

- iPod® 5th Generation (firmware version 1.3 or later)
- iPod® Classic (80GB) (firmware version 11.2PC or later)
- iPod® Classic (120GB) (firmware version 2.0PC or later)
- iPod® nano - 1st generation (firmware version 1.3.1 or later)
- iPod® nano - 2nd generation (firmware version 11.3 or later)
- iPod® nano - 3rd generation (firmware version 11.3PC or later)
- iPod® nano - 4th generation (firmware version 1.0PC or later)
- iPod® nano - 5th generation (8GB) (firmware version 1.0.2PC or later)
- iPod® nano - 5th generation (16GB) (firmware version 1.0.2PC or later)
- iPod® nano - 6th generation (8GB) (firmware version 1.2PC or later)
- iPod® nano - 6th generation (8GB) (firmware version 1.1PC or later)
- iPod® nano - 6th generation (8GB) (firmware version 1.0PC or later)
- iPod® Touch - 1st generation (firmware version 2.2.1 or later)
- iPod® Touch - 2nd generation (firmware version 2.2.1 or later)
- iPod® Touch - 3rd generation (firmware version 3.1.3 or later)
- iPod® Touch - 4th generation (firmware version 4.3.5 or later)
- iPhone® 3G (firmware version 4.1 or later)
- iPhone® 3GS (firmware version 4.3 or later)
• iPhone® 4 (firmware version 5.0 or later)
• iPhone® 4S (firmware version 5.1 or later)
• iPad® (firmware version 4.3.2 or later)
• iPad® 2 (firmware version 4.3.3 or later)

Make sure that your iPod® firmware is updated to the version indicated above.

Audio main operation

Place the ignition switch to the ACC or ON position. Then, press the MEDIA button or iPod MENU button repeatedly to switch to the iPod® mode.

If the audio system is turned off while the iPod® is playing, the iPod® plays when the audio system is turned back on.

If the audio system is off, pressing the MEDIA button or iPod MENU button turns the audio system on and plays the iPod®.

If the audio system is on, the audio system automatically begins playing tracks from the iPod® when it is plugged into the port.

iPod MENU button

Press the iPod MENU button while the iPod® is connected to show the iPod® operation menu on the audio display. Scroll through the menu list using the TUNE/FOLDER or TUNE/SCROLL knob. Press ENTER/SETTING button to select a menu item. Items in the iPod® menu appear on the display in the following order:

- Now playing
- Playlists
- Artists
- Albums
- Songs
- Podcasts
- Genres
- Composers
- Audiobooks
- Shuffle songs

For additional information, refer to the iPod® Owner’s Manual regarding each item.

REPEAT (RPT)

When the RPT button is pressed while a track is being played, the play pattern can be changed as follows:

Repeat Off → 1 Track Repeat → All Repeat → Repeat Off

1 Track Repeat: the current track will be repeated.
All Repeat: all songs in the current list are repeated.
Repeat Off: no repeat play pattern is applied.

RANDOM (RDM)

When the RDM button is pressed while a track is being played, the play pattern can be changed as follows:

Shuffle Off → Track Shuffle → Album Shuffle → Shuffle Off

Track Shuffle: the tracks in the current list will be played randomly.

SEEK/CAT or TRACK buttons

Press the SEEK/CAT or TRACK buttons ⏯ or ⏯ to skip backward or forward one track.
Press and hold the SEEK/CAT or TRACK buttons ⏯ or ⏯ for 1.5 seconds while a track is playing to reverse or fast forward the track being played. The track plays at an increased speed while reversing or fast forwarding. When the button is released, the track returns to normal play speed.
Album Shuffle: the albums in the current list will be played randomly. Shuffle Off: no random play pattern is applied.

BACK button
When the BACK button is pressed, it returns to the previous menu.

CAUTION
- Do not force the USB device into the USB port. Inserting the USB device tilted or up-side-down into the port may damage the port. Make sure that the USB device is connected correctly into the USB port.
- Do not grab the USB port cover (if so equipped) when pulling the USB device out of the port. This could damage the port and the cover.
- Do not leave the USB cable in a place where it can be pulled unintentionally. Pulling the cable may damage the port.

For additional information, refer to your device manufacturer’s owner information regarding the proper use and care of the device.

Connecting iPod®

To connect an iPod® to the vehicle so that the iPod® can be controlled with the audio system controls and display screen, use the USB connection port located in the center console. Connect the iPod®-specific end of the cable to the iPod® and the USB end of the cable to the USB connection port on the vehicle. If your iPod® supports charging via a USB connection, its...
battery will be charged while connected to the vehicle with the ignition switch in the ACC or ON position.

While connected to the vehicle, the iPod® may only be able to be operated by the vehicle audio controls.

To disconnect the iPod® from the vehicle, remove the USB end of the cable from the USB connection port on the vehicle, then remove the cable from the iPod®.

* iPod® is a trademark of Apple Inc., registered in the U.S. and other countries.

**Compatibility**

The following models are compatible:

- iPod® Classic 5th generation (firmware version 1.3.0 or later)
- iPod® Classic 6th generation (firmware version 2.0.1 or later)
- iPod® Classic 7th generation (firmware version 2.0.4 or later)
- iPod® Touch 2nd generation (firmware version 4.21 or later)*
- iPod® Touch 3rd generation (firmware version 5.1 or later)
- iPod® Touch 4th generation (firmware version 5.1 or later)
- iPod® nano - 1st generation (firmware version 1.3.1 or later)
- iPod® nano - 2nd generation (firmware version 11.3 or later)
- iPod® nano - 3rd generation (firmware version 11.3 or later)
- iPod® nano - 4th generation (firmware version 10.4 or later)
- iPod® nano - 5th generation (firmware version 10.2 or later)
- iPod® nano - 6th generation (firmware version 11 or later)
- iPhone® 3G (firmware version 4.2.1 or later)
- iPhone® 3GS (firmware version 5.1 or later)
- iPhone® 4 (firmware version 5.1 or later)
- iPhone® 4S (firmware version 5.1 or later)

* Some features of this iPod® may not be fully functional.

Make sure that your iPod® firmware is updated to the version indicated above.

**Audio main operation**

Place the ignition switch in the ACC or ON position. Press the AUX button repeatedly to switch to the iPod® mode.

If the system has been turned off while the iPod® was playing, pressing the ON-OFF button will start the iPod®.

**AUX button**

When the AUX button is pressed with the system off and the iPod® connected, the system will turn on. If another audio source is playing and the iPod® is connected, press the AUX button repeatedly until the center display changes to the iPod® mode.
Interface

The interface for iPod® operation shown on the vehicle’s audio system display screen is similar to the iPod® interface. Use the touch-screen, BACK button or the TUNE knob to navigate the menus on the screen.

When the iPod® is playing, touch the ‘Menu’ key to bring up the iPod® interface.

Depending on the iPod® model, the following items may be available on the menu list screen. For additional information, refer to the iPod® Owner’s Manual.

- Playlists
- Artists
- Albums
- Songs
- Genres
- Composers
- Audiobooks
- Podcasts
- Update Music Library

Shuffle and repeat play mode

While the iPod® is playing, the play pattern can be altered so that songs are repeated or played randomly.

Shuffle

Touch the ‘Shuffle’ key to apply a random play pattern to the iPod®. When the Shuffle mode is active, the text is illuminated and will display “Shuffle songs” text above the ‘Shuffle’ key. To cancel Shuffle mode, touch the ‘Shuffle’ key again until the text is no longer illuminated.

Repeat

Touch the ‘Repeat’ key to apply a repeat play pattern to the iPod®. When the repeat mode is active, the text is illuminated and will display “Repeat song” text above the ‘Repeat’ key. To cancel Repeat mode, touch the ‘Repeat’ key again until the text is no longer illuminated.

SEEK buttons

Press the SEEK button ‹‹ or ›› to skip backward or forward one track.

Press and hold the SEEK button ‹‹ or ›› for 1.5 seconds while a track is playing to reverse or fast forward the track being played. The track plays at an increased speed while reversing or fast forwarding. When the button is released, the track returns to normal play speed.
Scrolling menus
While navigating long lists of artists, albums or songs in the music menu, it is possible to scroll the list by the first character in the name. To activate character indexing, touch the “A-Z” key in the upper right corner of the screen. Turn the TUNE knob to choose the number or letter to jump to in the list and then press the AUDIO button.

BLUETOOTH® STREAMING AUDIO WITHOUT NAVIGATION SYSTEM (if so equipped)
If you have a compatible Bluetooth® audio device that is capable of playing audio files, the device can be connected to the vehicle’s audio system so that the audio files on the device play through the vehicle’s speakers. For additional information, refer to “FM/AM radio with compact disc (CD) player” or “FM/AM/SAT radio with compact disc (CD) player (Type A)” in this section.

NOTE:
For additional information, refer to the Cellular Phone Owner’s Manual.

Connecting Bluetooth® audio
To connect your Bluetooth® audio device to the vehicle, follow the procedure below:

1. Press the ENTER/SETTING button.
2. Use the TUNE/SCROLL knob to select the “Bluetooth” option.
3. Use the TUNE/SCROLL knob to select “Add Phone or Device”. This same screen can be accessed to remove, replace or select a different Bluetooth® device.
4. The system acknowledges the command and asks you to initiate connecting from the phone handset. The connecting procedure of the cellular phone varies according to each cellular phone model. For additional information, refer to the cellular phone Owner’s Manual.

Audio main operation
To switch to the Bluetooth® audio mode, press the MEDIA button repeatedly until the Bluetooth® audio mode is displayed on the screen.

Press the MEDIA button repeatedly to toggle through the following menu options;
• Title
• Artist
• Album

BLUETOOTH® STREAMING AUDIO WITH NAVIGATION SYSTEM (if so equipped)
If you have a compatible Bluetooth® audio device that is capable of playing audio files, the device can be connected to the vehicle's audio system so that the audio files on the device play through the vehicle's speakers.

Connecting Bluetooth® audio
To connect your Bluetooth® audio device to the vehicle, follow the procedure below:
1. Press the [ APPS ] button.
2. Touch the “Settings” key.
3. Touch the ‘Phone & Bluetooth’ key.
4. Touch the ‘Connect New Device’ key.
5. The system acknowledges the command and asks you to initiate connecting from the phone handset. The connecting procedure of the cellular phone varies according to each cellular phone model. For additional information, refer to the cellular phone Owner's Manual. You can also visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for instructions on connecting NISSAN recommended cellular phones.

Audio main operation
To switch to the Bluetooth® audio mode, press the AUX button repeatedly until the Bluetooth® audio mode is displayed on the screen.

The controls for the Bluetooth® audio are displayed on the screen.

CD CARE AND CLEANING

- Handle a CD by its edges. Do not bend the disc. Never touch the surface of the disc.
- Always place the discs in the storage case when they are not being used.
- To clean a disc, wipe the surface from the center to the outer edge using a clean, soft cloth. Do not wipe the disc using a circular motion.
- Do not use a conventional record cleaner or alcohol intended for industrial use.
A new disc may be rough on the inner and outer edges. Remove the rough edges by rubbing the inner and outer edges with the side of a pen or pencil as illustrated.

Type A (if so equipped)
STEERING WHEEL SWITCH FOR AUDIO CONTROL
1. Tuning switch/ENTER button (if so equipped)
2. SOURCE switch
3. Volume control switch
The audio system can be operated using the controls on the steering wheel.

Type B (if so equipped)

Monitor, climate, audio, phone and voice recognition systems
SOURCE switch

Press the SOURCE switch to change the mode in the following sequence:

AM → FM1 → FM2 → (XM1 → XM2 → XM3 (satellite radio, if so equipped)) → (SXM1 → SXM2 → SXM3 (satellite, if so equipped)) → CD* → USB/iPod®* → Bluetooth® Audio* (if so equipped) → AUX* → AM.

* These modes are only available when compatible media storage is inserted into the device or connected to the system.

Volume control switch

Push the volume control switch to increase or decrease the volume.

Tuning switch

While the display is showing a map or audio screen, tilt the Tuning switch upward or downward to select a station, track, CD or folder. For most audio sources, tilting the switch up/down for more than 1.5 seconds provides a different function than a tilting up/down for less than 1.5 seconds.

AM and FM

- Tilt up/down for less than 1.5 seconds to increase or decrease the preset station.
- Tilt up/down for more than 1.5 seconds to seek up or down to the next station.

XM/SXM (if so equipped)

- Tilt up/down for less than 1.5 seconds to increase or decrease the preset station.
- Tilt up/down for more than 1.5 seconds to go to the next or previous category.

iPod®

- Tilt up/down for less than 1.5 seconds to increase or decrease the track number.
- Tilt up/down for more than 1.5 seconds to fast forward or rewind the current track.

CD

- Tilt up/down for less than 1.5 seconds to increase or decrease the track number.
- Tilt up/down for more than 1.5 seconds to increase or decrease the folder number (if playing compressed audio files) or to fast forward or rewind the current track.

USB

- Tilt up/down for less than 1.5 seconds to increase or decrease the track number.
- Tilt up/down for more than 1.5 seconds to fast forward or rewind the current track.

Bluetooth® Audio (if so equipped)

- Tilt up/down for less than 1.5 seconds to skip ahead or back to the next song.

ANTENNA

The antenna pattern is printed inside the rear window.

CAUTION

- Do not place metalized film near the rear window glass or attach any metal parts to it. This may cause poor reception or noise.
- When cleaning the inside of the rear window, be careful not to scratch or damage the rear window antenna. Lightly wipe along the antenna with a dampened soft cloth.
This vehicle is equipped with Smartphone Integration technology. This allows many compatible Smartphone applications to be displayed and easily controlled through the vehicle’s touch-screen.

NOTE:
A compatible smartphone and registration is required to use mobile applications or to access connected features of certain vehicle applications.

REGISTERING WITH NISSANCONNECT® MOBILE APPS
To use the Smartphone Integration feature, it is necessary for the user to register. In order to register, visit the NissanConnect® Mobile Apps website, www.nissanusa.com/connect/ or www.nissan.ca/en/connect or www.nissan.ca/fr/connect and sign up or create an account through the prompts on the NissanConnect Mobile Apps. Once registered, download the NissanConnect Mobile Apps from your compatible phone’s application download source and then log into the application. If you already have an account created through the App, please log in.

CONNECT PHONE
To use this feature, a compatible smartphone must be connected via Bluetooth® or USB to the vehicle. For additional information, refer to ‘Bluetooth® Hands-Free Phone System with Navigation System’ in this section.

NOTE:
For vehicles with a navigation system, Apple iPhones® REQUIRE the phone to be plugged in via USB for NissanConnect Mobile Apps to function.

For Android phones, NissanConnect Mobile Apps REQUIRES the phone to be paired via Bluetooth®.

APPLICATION DOWNLOAD
Once connected, the NissanConnect App will search your phone to determine which compatible applications are currently installed. The user will then choose which apps they want to bring into their vehicle from the list of apps within the ‘Manage My Apps’ section of the NissanConnect App on their smartphone. The vehicle will then download the in-vehicle interface for each of these compatible applications. Once downloaded, the user can access their selected smartphone applications through the vehicle touch-screen. For additional information, refer to www.nissanusa.com/connect or www.nissan.ca/en/connect or www.nissan.ca/fr/connect regarding application availability.

NISSANCONNECT® MOBILE APPS (if so equipped)

Monitor, climate, audio, phone and voice recognition systems

4-74
NISSANCONNECT® SERVICES (if so equipped)

NissanConnect® Services is a suite of telematics tools that provide emergency preparedness, remote access, customizable alerts and convenience services. This feature is an option on navigation system equipped vehicles. For additional information, refer to the separate NissanConnect® Owner’s Manual.

SIRI® EYES FREE

Apple Siri® Eyes Free personal assistant can be accessed from the vehicle. Siri Eyes Free can be accessed in Siri Eyes Free mode to reduce user distraction. In this mode, Siri Eyes Free is available for interaction by voice control. After connecting a compatible Apple device by using Bluetooth®, Siri Eyes Free can be activated from the TALK switch on the steering wheel. Siri® is a trademark of Apple Inc., registered in the U.S. and other countries.

- Some Siri Eyes Free functions, such as displaying pictures or opening apps, may not be available while driving.
- For best results, always update your device to the latest software version.
- Keep the interior of the vehicle as quiet as possible. Close the windows to eliminate the surrounding noises (traffic noises, vibration sounds, etc.), which may prevent the system from recognizing the voice commands correctly.
- For functions that can be used in Siri Eyes Free, please refer to the Apple website.

REQUIREMENTS

Siri is only available on the iPhone® 4S or later. Devices released before iPhone® 4S are not supported by the Siri Eyes Free system. Visit www.apple.com/ios/siri for details about device compatibility.

Siri must be enabled on the phone. Please check phone settings.

If the device has a lock screen, Siri must be accessible from the lock screen. Please check phone settings.

For best results, always update your device to the latest software version.

Monitor, climate, audio, phone and voice recognition systems 4-75
SIRI® ACTIVATION

Siri® Eyes Free function can be activated by pushing the TALK switch on the steering wheel.

**Models with navigation system**

1. Connect an Siri Eyes Free enabled iPhone® to the vehicle. For additional information, refer to "Connecting procedure" in this section.
2. After the Bluetooth® connection is established, push and hold the TALK switch to activate the Siri Eyes Free function.

**Models without navigation system**

1. Connect a Siri Eyes Free enabled iPhone® to the vehicle. For additional information, refer to "Initialization" in this section.
2. After the Bluetooth® connection is established, the switch operation select screen is displayed.
3. Select “Short Press” or “Long Press” for Siri Eyes Free activation. Switch action can also be changed from the Bluetooth® settings menu. For additional information, refer to “Changing Siri Eyes Free Settings (models without navigation system)” in this section.

OPERATING SIRI® EYES FREE

1. Push or push and hold the TALK switch.
2. Speak your command and then listen to the Siri® Eyes Free reply.
3. Your vehicle will automatically change to Bluetooth® Audio or iPod® mode* when the music starts playing. Mode selection is determined by the phone.
   * If the iPhone® is also connected with the USB cable.
4. After starting Siri Eyes Free, push the TALK switch again within 5 seconds of the end of the Siri Eyes Free announcement to extend the session.
5. If the audio track does not start playing automatically after Siri Eyes Free ends, try changing the track or audio source to resume playback.

---

4-76 Monitor, climate, audio, phone and voice recognition systems
NOTE:
For best results, use the native music app. Performance of music control function while using Podcasts, Audiobook or other 3rd party music apps may vary and is controlled by the iPhone®.

Example 2 – Replying to text messages
1. If a compatible iPhone® is connected and ‘Show Notifications’ of the iPhone® settings is enabled, the vehicle will display a notification for new incoming text messages.
2. After reading the message, push the switch to go back to the previous screen then push or push and hold the TALK switch to reply using Siri Eyes Free.
3. After a beep sounds, say ‘Text message’ or a similar command to reply using Siri Eyes Free.

CHANGING SIRI® EYES FREE SETTINGS (models without navigation system)
Settings for Siri® Eyes Free can be found in the Bluetooth® settings menu. For additional information, refer to ‘Bluetooth® settings’ in this section.
1. Press the ENTER/SETTING button.
2. Use the TUNE/SCROLL knob to select ‘Bluetooth’ and then press the ENTER/SETTING button.
3. Use the TUNE/SCROLL knob to select ‘Siri’ and then press the ENTER/SETTING button.
4. Select ‘Short Press’ or ‘Long Press’ using the TUNE/SCROLL knob and then press the ENTER/SETTING button.

CHANGING SIRI® EYES FREE SETTINGS (models with navigation system)
Settings for Siri® Eyes Free can be found in the Bluetooth® settings menu. For additional information, refer to ‘Bluetooth® settings’ in this section.
1. Press the button.
2. Touch the “Settings” key.
3. Touch the “Phone & Bluetooth” key.
4. Touch the “Phone settings” key.
5. Select ‘Short Press’ or ‘Long Press’ to set the activation.
## Troubleshooting Guide

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Countermeasure</th>
</tr>
</thead>
</table>
| Cannot access Siri Eyes Free from switch on the steering wheel | - Check if a Bluetooth® connection is established between the iPhone® and the system.  
- Check if Siri is enabled on the device. On your phone, go to Siri setting.  
- Check that Siri can be accessed from the device lock screen. This can be set in the settings menu of your phone.  
- Models without navigation system: Check the settings for Siri Eyes Free activation on the vehicle audio system. If the setting is “Long Press”, you must push and hold the TALK switch on the steering wheel for more than 1.5 seconds to start Siri Eyes Free. If the setting is “Short Press”, a short push and release of the switch should start Siri Eyes Free. |
| Audio Source does not change automatically to iPod® or Bluetooth® Audio mode | - For best results, use the native Music app. Performance of music control function while using Podcasts, Audiobook or other 3rd party music apps may vary.  
- For best results, play media already stored on your device. Streaming music or playback from cloud storage may degrade performance.  
- Switch the source manually by pressing the AUX or MEDIA button on the vehicle audio system or the SOURCE select switch on the steering wheel. |
| Play, pause, next track, previous track or play timer does not work | - For best results, use the native Music app. Performance of music control function while using Podcasts, Audiobook or other 3rd party music apps may vary and is controlled by the device. |
| Cannot hear any music/ audio being played back from a connected iPhone® | Check that the audio source is set to Bluetooth® Audio or iPod® mode. A USB connection is required for iPod® mode. |
| Cannot hear map turn-by-turn direction guidance from a connected iPhone® | Check that the audio source is set to Bluetooth® Audio or iPod® mode. A USB connection is required for iPod® mode. |
| Cannot receive text message notifications on the vehicle audio system | Check if “Send Notifications” is enabled on your phone. On the phone, go to Bluetooth® settings. Find the device name, like “My Car”. Press the info button. Turn on “Show Notifications”. |
| Cannot reply to text message notifications by Siri Eyes Free | After receiving an incoming text message, follow on-screen guidance. Push or push and hold the TALK switch on the steering wheel for more than 1.5 seconds to start Siri Eyes Free. After Siri Eyes Free starts, say “Text Message”. |

Monitor, climate, audio, phone and voice recognition systems
When installing a CB, ham radio or car phone in your vehicle, be sure to observe the following precautions; otherwise, the new equipment may adversely affect the engine control system and other electronic parts.

**WARNING**

- A cellular phone should not be used for any purpose while driving so full attention may be given to vehicle operation. Some jurisdictions prohibit the use of cellular phones while driving.
- If you must make a call while your vehicle is in motion, the hands free cellular phone operational mode (if so equipped) is highly recommended. Exercise extreme caution at all times so full attention may be given to vehicle operation.
- If you are unable to devote full attention to vehicle operation while talking on the phone, pull off the road to a safe location and stop your vehicle.

**CAUTION**

- Keep the antenna as far away as possible from the electronic control modules.
- Keep the antenna wire more than 8 in (20 cm) away from the electronic control system harnesses. Do not route the antenna wire next to any harness.
- Adjust the antenna standing-wave ratio as recommended by the manufacturer.
- Connect the ground wire from the CB radio chassis to the body.
- For additional information, it is recommended that you visit a NISSAN dealer for this service.

**WARNING**

- Use a phone after stopping your vehicle in a safe location. If you have to use a phone while driving, exercise extreme caution at all times so full attention may be given to vehicle operation.
- If you are unable to devote full attention to vehicle operation while talking on the phone, pull off the road to a safe location and stop your vehicle.

**CAUTION**

To avoid discharging the vehicle battery, use a phone after starting the engine.
Your NISSAN is equipped with the Bluetooth® Hands-Free Phone System. If you have a compatible Bluetooth® enabled cellular phone, you can set up the wireless connection between your cellular phone and the in-vehicle phone module. With Bluetooth® wireless technology, you can make or receive a hands-free telephone call with your cellular phone in the vehicle.

Once your cellular phone is connected to the in-vehicle phone module, no other phone connecting procedure is required. Your phone is automatically connected with the in-vehicle phone module when the ignition switch is placed in the ON position with the previously connected cellular phone turned on and carried in the vehicle.

**NOTE:**
Some devices require the user to accept connections to other Bluetooth® devices; however some phones do not connect automatically to the system. For additional information, refer to the phone's Owner's Manual.

You can connect up to five different Bluetooth® cellular phones to the in-vehicle phone module. However, you can talk on only one cellular phone at a time.

Before using the Bluetooth® Hands-Free Phone System, refer to the following notes.

- Set up the wireless connection between a compatible cellular phone and the in-vehicle phone module before using the hands-free phone system.
Some Bluetooth® enabled cellular phones may not be recognized or work properly. Please visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for a recommended phone list and connecting instructions.

- You will not be able to use a hands-free phone under the following conditions:
  - Your vehicle is outside of the cellular service area.
  - Your vehicle is in an area where it is difficult to receive a cellular signal, such as in a tunnel, in an underground parking garage, near a tall building or in a mountainous area.
  - Your cellular phone is locked to prevent it from being dialed.
- When the radio wave condition is not ideal or ambient sound is too loud, it may be difficult to hear the other person’s voice during a call.
- Do not place the cellular phone in an area surrounded by metal or far away from the in-vehicle phone module to prevent tone quality degradation and wireless connection disruption.

- While a cellular phone is connected through the Bluetooth® wireless connection, the battery power of the cellular phone may discharge quicker than usual. The Bluetooth® Hands-Free Phone System cannot charge cellular phones.
- For additional information, please visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for troubleshooting help.
- Some cellular phones or other devices may cause interference or a buzzing noise to come from the audio system speakers. Storing the device in a different location may reduce or eliminate the noise.
- For additional information, refer to the cellular phone Owner’s Manual regarding the telephone charges, cellular phone antenna and body, etc.

REGULATORY INFORMATION

FCC Regulatory information
- CAUTION: To maintain compliance with FCC’s RF exposure guidelines, use only the supplied antenna. Unauthorized antenna, modification, or attachments could damage the transmitter and may violate FCC regulations.
- Operation is subject to the following two conditions:
  1. This device may not cause interference and
  2. this device must accept any interference, including interference that may cause undesired operation of the device.

IC Regulatory information
- Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
- This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

BLUETOOTH® is a trademark owned by Bluetooth SIG, Inc. and licensed to Visteon.
USING THE SYSTEM
The system allows hands-free operation of the Bluetooth® Hands-Free Phone System.

If the vehicle is in motion, some commands may not be available so full attention may be given to vehicle operation.

Initialization
When the ignition switch is placed in the ON position, NISSAN Voice Recognition is initialized, which takes a few seconds. If the \( \text{(Type A)} \) or the \( \text{(Type B)} \) button is pressed before the initialization completes, the system will announce “Hands-free phone system not ready” and will not react to voice commands.

Operating tips
To get the best performance out of the NISSAN Voice Recognition system, observe the following:

• Keep the interior of the vehicle as quiet as possible. Close the windows to eliminate surrounding noises (traffic noises, vibration sounds, etc.), which may prevent the system from recognizing voice commands correctly.

• Wait until the tone sounds before speaking a command. Otherwise, the command will not be received properly.

• Start speaking a command within 5 seconds after the tone sounds.

• Speak in a natural voice without pausing between words.

Giving voice commands
To operate NISSAN Voice Recognition, press and release the \( \text{(Type A)} \) or the \( \text{(Type B)} \) button located on the steering wheel. After the tone sounds, start speaking a command.
The command given is picked up by the microphone, and voice feedback is given when the command is accepted.

• If you need to hear the available commands for the current menu again, say “Help” and the system will repeat them.

• If a command is not recognized, the system announces, “Command not recognized. Please try again.” Make sure the command is said exactly as prompted by the system and repeat the command in a clear voice.

• If you want to go back to the previous command, you can say “Go back” or “Correction” any time the system is waiting for a response.

• You can cancel a command when the system is waiting for a response by saying, “Cancel” or “Quit.” The system announces “Cancel” and ends the Voice Recognition session. You can also press and hold the \( \text{button on the steering wheel for 5 seconds at any time to end the Voice Recognition session. Whenever the Voice Recognition session is cancelled, a double beep is played to indicate you have exited the system.

• If you want to adjust the volume of the voice feedback, press the volume control switches (+ or -) on the steering wheel while being provided with feedback. You can also use the radio volume control knob.

4-82 Monitor, climate, audio, phone and voice recognition systems
Voice Prompt Interrupt
In most cases you can interrupt the voice feedback to speak the next command by pressing the \[\text{Type A}\] (Type A) or the \[\text{Type B}\] button on the steering wheel. After interrupting the system, wait for a beep before speaking your command.

One Shot Call
To use the system faster, you may speak the second level commands with the main menu command on the main menu. For example, press the \[\text{Type A}\] (Type A) or the \[\text{Type B}\] button and after the tone say, 'Call Redial'.

CONTROL BUTTONS
The control buttons for the Bluetooth® Hands-Free Phone System are located on the steering wheel.

\[\text{Type A (if so equipped)}\]

**PHONE/SEND**
Press the \[\text{Type A}\] (Type A) or the \[\text{Type B}\] button to initiate a Voice Recognition session or answer an incoming call.

Monitor, climate, audio, phone and voice recognition systems 4-83
While the Voice Recognition system is active, press and hold the button for 5 seconds to quit the Voice Recognition system at any time.

Tuning switch
While using the Voice Recognition system, tilt the tuning switch up or down to manually control the phone system.

### CONNECTING PROCEDURE

**NOTE:**
The connecting procedure must be performed when the vehicle is stationary. If the vehicle starts moving during the procedure, the procedure will be canceled.

To connect a phone to the Bluetooth® Hands-Free Phone System:

**Manual Connecting Procedure**

1. Press the ENTER/SETTING button.
2. Use the TUNE/SCROLL or TUNE/FOLDER knob to select ‘Bluetooth’ and then press the ENTER/SETTING button.

<table>
<thead>

</tbody>
</table>
Automatic Connecting Procedure

If no phone is connected to the system, press the button (Type A) or the button (Type B) on the steering wheel. The system will automatically begin searching for a compatible phone. If the system detects a compatible phone a message with a PIN appears on the screen. Operate the Bluetooth® phone to enter the PIN and complete the connection process.

VOICE COMMANDS

Voice commands can be used to operate the Bluetooth® Hands-Free Phone System. Press the button (Type A) or the button (Type B) and say “Phone” to bring up the phone command menu. The available options are:

- Call
- Phonebook
- Recent Calls
- Messaging (if so equipped)
- Select Phone

“Call”

For additional information, refer to “Making a call” in this section.

‘Phonebook’

The following commands are available under ‘Phonebook’:

- (a name)
  Say a name in the phonebook to bring up a list of options for that phonebook entry. The system will say the name it interpreted based on the voice command provided. If the name is incorrect, say “Correction” to hear another name. Once the correct phonebook entry is identified, say “Dial” to dial the number or “Send Text” to send a text message to that number. Say “Record Name” to record a name for the phonebook entry. Say “Delete Recording” to delete a recorded name for the phonebook entry.

- List Names
  Speak this command to have the system list the names in the phonebook one by one alphabetically. Say “Dial” to dial the number of the current name or “Send Text” to send a text message to that number. Say “Next Entry” or “Previous Entry” to move through the list alphabetically. Say “Record Name” to record a name for the current phonebook entry. Say “Delete Recording” to delete a recorded name for the current phonebook entry.

“Recent Calls”

The following commands are available under ‘Recent Calls’:

- Incoming Calls
  Speak this command to list the last five incoming calls to the vehicle. If the call is from an entry in the phonebook, the name will be displayed. Otherwise, the phone number of the incoming call will be displayed. Say “Dial” to call the number or “Send Text” to send a text message to that number. Say “Next Entry” or “Previous Entry” to move through the list of incoming calls.

Monitor, climate, audio, phone and voice recognition systems 4-85
• Missed Calls
Speak this command to list the last five
missed calls to the vehicle. If the call is
from an entry in the phonebook, the
name will be displayed. Otherwise, the
phone number of the missed call will be
displayed.
Say “Dial” to call the number or “Send
Text” to send a text message to that
number. Say “Next Entry” or “Previous
Entry” to move through the list of
missed calls.
• Outgoing Calls
Speak this command to list the last five
outgoing calls from the vehicle. If the
call was to an entry in the phonebook,
the name will be displayed. Otherwise,
the phone number of the outgoing call
will be displayed.
Say “Dial” to call the number or “Send
Text” to send a text message to that
number. Say “Next Entry” or “Previous
Entry” to move through the list of out-
going calls.
• Redial
Speak this command to call the last
number dialed.
• Call Back
Speak this command to call the num-ber of the last incoming call to the ve-
hicle.
‘Messaging’ (if so equipped)
Speak this command to access text mes-
saging functions. For additional infor-
mation, refer to “Text messaging” in this
section.
‘Select Phone’
Speak this command to select a phone to
use from a list of those phones connected
to the vehicle.
MAKING A CALL
To make a call from a phone connected to
the vehicle’s Bluetooth® Hands-Free Phone
System:
NOTE:
Available commands different if system
is in Manual Control mode. For additional
information, refer to “Manual Control” in
this section.
1. Press the 📲 (Type A) or the 📲 (Type B) button.
2. The system will prompt you for a com-
mmand. Say “Call”.
3. Select one of the available voice com-
mands to continue:
• “[a name]” — Speak the name of a
  phonebook entry to place a call to that
  entry. The system will respond with the
  name it interpreted from your com-
mmand and will prompt you to confirm
  that the name is correct. Say “Yes” to
  initiate the call or “No” to hear another
  name from the phonebook.
• “List Names” — Speak this command to
  have the system list the names in the
  phonebook one by one alphabetically.
  Say “Next Entry” or “Previous Entry” to
  move through the list alphabetically.
Say “Select” once desired contact is
heard and displayed on screen. Say
“Dial” to dial the number of the current
name or say “Record Name” to record a
name for the current phonebook entry
to be assigned.
• “Phone Number” — Speak this command to place a call by inputting numbers. For 7- to 10-digit phone number, speak the numbers. Say “Correction” at any time in the process to correct a misspoken or misinterpreted number. For phone numbers with more digits or special characters, say “Special Number”, then speak the digits. Up to 24 digits can be entered. Available special characters are ‘start’, ‘pound’, ‘plus’, and ‘pause’. When finished, say “Dial” to initiate the call. Say “Correction” at any time in the process to correct a misspoken or misinterpreted number or character.

• “Redial” – Speak this command to dial the number of the last outgoing call. The system will display “Re-dialing <name/number>”. If available, the name of the phonebook entry will be displayed if it available, otherwise the number being redialed will be displayed.

• “Call Back” – Speak this command to dial the number of the last incoming call. The system will display “Calling back <name/number>”. If available, the name of the phonebook entry will be displayed if it available, otherwise the number being called back will be displayed.

RECEIVING A CALL
When a call is received by the phone connected to the vehicle’s Bluetooth® Hands-Free Phone System, the call information is displayed on either the vehicle information display or both the vehicle information display and the control panel display.

Press the (Type A) or the (Type B) button to accept the call. Press the button to reject the call.

DURING A CALL
While a call is active, press the (Type A) or the (Type B) button to access additional options. Speak one of the following commands:

• '(numbers)' – Speak numbers and then say “Send” or say “Correction” to change the numbers entered.
• ‘Mute On’ or ‘Mute Off’ – Speak the command to mute or unmute the system.
• ‘Transfer Call’ – Speak this command to transfer the call to the handset. To transfer the call back from the handset to the Bluetooth® Hands-Free Phone System, press the (Type A) or the (Type B) button and confirm when prompted.

If supported by the phone, the Bluetooth® Hands-Free Phone System allows for call waiting functionality. If a call is received while another call is already active, a message will be displayed on the screen. Press the (Type A) or the (Type B) button to hold the active call and switch to the second call. Press the button to reject the second call.

While the second call is active, pressing the (Type A) or the (Type B) button will allow the same commands that are available during any call and additional commands:

• “Switch Call” – Speak this command to hold the second call and switch back to the original call.
• “End Other Call” – Speak this command to stay with the second call and end the original call.

Press the (Type A) or the (Type B) button to accept the call. Press the button to reject the call.
ENDING A CALL
To end an active call, press the ☎️ button.

TEXT MESSAGING (if so equipped)

⚠️ WARNING
- Laws in some jurisdictions may restrict the use of "Text-to-Speech". Check local regulations before using this feature.
- Laws in some jurisdictions may restrict the use of some of the applications and features, such as social networking and texting. Check local regulations for any requirements.
- Use the text messaging feature after stopping your vehicle in a safe location. If you have to use the feature while driving, exercise extreme caution at all times so full attention may be given to vehicle operation.
- If you are unable to devote full attention to vehicle operation while using the text messaging feature, pull off the road to a safe location and stop your vehicle.

NOTE:
This feature is automatically disabled if the connected device does not support the Message Access Profile (MAP). For additional information, refer to the phone’s Owner’s Manual for details and instructions.

NOTE:
Many phones may require special permission to enable text messaging. Check the phone’s screen during Bluetooth® pairing. For some phones, you may need to enable ‘Notifications’ in the phone’s Bluetooth® menu for text messages to appear on the headunit. For additional information, refer to your phone’s Owner’s manual. Text message integration requires that the phone support MAP (Message Access Profile) for both receiving and sending text messages. Some phones may not support all text messaging features. For additional information, please refer to www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for compatibility information, as well as your device’s Owner’s manual.

The system allows for the sending and receiving of text messages through the vehicle interface.

Sending a text message:
1. Press the ☎️ (Type A) or the ☎️ (Type B) button on the steering wheel.
2. Say ‘Phone’ after the tone.
3. Say ‘Send Text’ after the tone.
4. The system will provide a list of available commands in order to determine the recipient of the text message. Choose from the following:
   - To (a name)
   - Enter Number
   - Missed Calls
   - Incoming Calls
   - Outgoing Calls
For additional information about these options, refer to "Voice commands" in this section.
5. Once a recipient is chosen, the system prompts for which message to send. Nine predefined messages are available as well as three custom messages. To choose one of the predefined messages, speak one of the following after the tone:
   • "Driving, can't text"
   • "Call me"
   • "On my way"
   • "Running late"
   • "Okay"
   • "Yes"
   • "No"
   • "Where are you?"
   • "When?"
   • "Custom Messages"

To send one of the custom messages, say "Custom Messages". If more than one custom message is stored, the system will prompt for the number of the desired custom message. For additional information on setting and managing custom text messages, refer to "Bluetooth® settings" in this section.

**Reading a received text message:**
1. Press the remote control (Type A) or the steering wheel (Type B) button on the steering wheel.
2. Say ‘Phone’ after the tone.
3. Say ‘Read Text’ after the tone.

The text message, sender and delivery time are shown on the screen. Use the tuning switch to scroll through all text messages if more than one are available. Press the remote control button to exit the text message screen. Press the remote control (Type A) or the steering wheel (Type B) button to access the following options for replying to the text message:
   • "Call Back"
   • "Send Text"
   • "Read Text"

   Speak this command to call the sender of the text message using the Bluetooth® Hands-Free Phone System.
   Speak this command to send a text message response to the sender of the text message.
   Speak this command to read the text message again.

• Previous Text
   Speak this command to move to the previous text message (if available).
• Next Text
   Speak this command to move to the next text message (if available).

**Siri® Eyes Free**
If a connected phone is equipped with Siri®, it can also be used to create custom messages that are sent through the phone. For additional information, refer to “Siri® Eyes Free” in this section.

**NOTE:**
Text messages are only displayed if the vehicle speed is less than 5 mph (8 km/h).

**NOTE:**
For Apple iPhones®, text messages can only be sent through Siri.
BLUETOOTH® SETTINGS

To access and adjust the settings for the Bluetooth® Hands-Free Phone System:

1. Press the ENTER/SETTING button.
2. Use the TUNE/SCROLL or TUNE/FOLDER knob to select “Bluetooth” and then press the ENTER/SETTING button:
   - Bluetooth
     Select “On” or “Off” to turn the vehicle’s Bluetooth® system on or off.
   - Add Phone or Device
     For additional information, refer to “Connecting procedure” in this section.
   - Delete Phone or Device
     Select to delete a phone from the displayed list. The system will ask to confirm before deleting the phone.
   - Replace Phone
     Select to replace a phone from the displayed list. When a selection is made, the system will ask to confirm before proceeding. The recorded phonebook for the phone being deleted will be saved as long as the new phone’s phonebook is the same as the old phone’s phonebook.
   - Select Phone or Device
     Select to connect to a previously connected phone from the displayed list.
   - Phonebook Download
     Select to turn on or off the automatic download of a connected phone’s phonebook.
   - Show Incoming Calls
     Select “Driver Only” to have incoming call information displayed only in the vehicle information display. Select “Both” to have incoming call information displayed in both the vehicle information display and the center display screen.
   - Siri
     Select the (Type A) or the (Type B) button operation for Siri® Eyes Free function from “Short Press” and “Long Press” (if available). For additional information, refer to “Siri® Eyes Free” in this section. “Siri” is displayed only when a Siri Eyes Free enabled iPhone® is connected to the vehicle.
   - Text Message
     Select to turn on or off the vehicle’s text messaging feature.
   - New Text Sound
     Select to adjust the volume of the sound that plays when a new text is received by a phone connected to the Bluetooth® Hands-Free Phone System. The setting all the way to the left indicates that the new text sound will be muted.
- Show Incoming Text
  Select “Driver Only” to have incoming text messages displayed only in the vehicle information display. Select “Both” to have incoming text messages displayed in both the vehicle information display and the center display screen. Select “None” to have no display of incoming text messages.

- Edit Custom Messages
  Select to set a custom message that will be available with the standard options when sending a text message. To set a custom message, send a text message to your own phone number while the phone is connected to the system. Three custom messages can be set. Custom messages can only be set while the vehicle is stationary.

- Auto Reply
  Select to turn on or off the Auto Reply function. When enabled, the vehicle will automatically send a predefined text message to the sender when a text message is received while driving.

- Auto Reply Message
  Select to choose the message that is sent when the Auto Reply function is enabled. Choose from “I’m Driving” or one of the three custom messages stored in the system.

- Vehicle Signature On/Off
  Select to choose whether or not the vehicle signature is added to outgoing text messages from the vehicle. This message cannot be changed or customized.

**MANUAL CONTROL**

While using the NISSAN Voice Recognition system, it is possible to select menu options by using the steering wheel controls instead of speaking voice commands. The manual control mode does not allow dialing a phone number by digits. The user may select an entry from the Phonebook or Recent Calls lists. To re-activate NISSAN Voice Recognition, exit the manual control mode by pressing and holding the button. At that time, pressing the (Type A) or the (Type B) button will start the Hands Free Phone System.

**WARNING**

- Use a phone after stopping your vehicle in a safe location. If you have to use a phone while driving, exercise extreme caution at all times so full attention may be given to vehicle operation.
- If you are unable to devote full attention to vehicle operation while talking on the phone, pull off the road to a safe location and stop your vehicle.

**CAUTION**

To avoid discharging the vehicle battery, use a phone after starting the engine.

Monitor, climate, audio, phone and voice recognition systems  4-91
Your NISSAN is equipped with the Bluetooth® Hands-Free Phone System. If you have a compatible Bluetooth® enabled cellular phone, you can set up the wireless connection between your cellular phone and the in-vehicle phone module. With Bluetooth® wireless technology, you can make or receive a hands-free telephone call with your cellular phone in the vehicle.

Once your cellular phone is connected to the in-vehicle phone module, no other phone connecting procedure is required. Your phone is automatically connected with the in-vehicle phone module when the ignition switch is placed in the ON position with the connected cellular phone turned on and carried in the vehicle.

You can register up to five different Bluetooth® cellular phones to the in-vehicle phone module. However, you can talk on only one cellular phone at a time.

NISSAN Voice Recognition system supports the phone commands, so dialing a phone number using your voice is possible. For additional information, refer to “NISSAN Voice Recognition System” in this section.

Before using the Bluetooth® Hands-Free Phone System, refer to the following notes.

- Set up the wireless connection between a cellular phone and the in-vehicle phone module before using the hands-free phone system.
- Some Bluetooth® enabled cellular phones may not be recognized by the in-vehicle phone module. Please visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for a recommended phone list and connecting.
• You will not be able to use a hands-free phone under the following conditions:
  - Your vehicle is outside of the cellular service area.
  - Your vehicle is in an area where it is difficult to receive cellular signal; such as in a tunnel, in an underground parking garage, near a tall building or in a mountainous area.
  - Your cellular phone is locked to prevent it from being dialed.
• When the radio wave condition is not ideal or ambient sound is too loud, it may be difficult to hear the other person’s voice during a call.
• Immediately after the ignition switch is placed in the ON position, it may be impossible to receive a call for a short period of time.
• Do not place the cellular phone in an area surrounded by metal or far away from the in-vehicle phone module to prevent tone quality degradation and wireless connection disruption.
• While a cellular phone is connected through the Bluetooth® wireless connection, the battery power of the cellular phone may discharge quicker than usual. The Bluetooth® Hands-Free Phone System cannot charge cellular phones.
• For additional information, refer to “Troubleshooting guide” in this section. If the hands-free phone system seems to be malfunctioning, you can also visit www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for troubleshooting help.
• Some cellular phones or other devices may cause interference or a buzzing noise to come from the audio system speakers. Storing the device in a different location may reduce or eliminate the noise.
• For additional information, refer to the cellular phone owner’s manual regarding the telephone charges, cellular phone antenna and body, etc.
• The signal strength display on the monitor will not coincide with the signal strength display of some cellular phones.

REGULATORY INFORMATION

FCC Regulatory information
- CAUTION: To maintain compliance with FCC’s RF exposure guidelines, use only the supplied antenna. Unauthorized antenna, modification, or attachments could damage the transmitter and may violate FCC regulations.
- Operation is subject to the following two conditions:
  1. This device may not cause interference and
  2. this device must accept any interference, including interference that may cause undesired operation of the device.

IC Regulatory information
- Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
- This Class B digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

Monitor, climate, audio, phone and voice recognition systems  4-93
BLUETOOTH® is a trademark owned by Bluetooth SIG, Inc. and licensed to Bosch.

VOICE COMMANDS

You can use voice commands to operate various Bluetooth® Hands-Free Phone System features using the NISSAN Voice Recognition system. For additional information, refer to "NISSAN Voice Recognition System" in this section.

Voice Prompt Interrupt

While using the voice recognition system, the system voice can be interrupted to allow the user to speak commands. While the system is speaking, press the button on the steering wheel. The system voice will stop and a tone will be heard. After the tone, speak desired command (displayed on the touch-screen).

CONNECTING PROCEDURE

NOTE:
The connecting procedure must be performed when the vehicle is stationary. If the vehicle starts moving during the procedure, the procedure will be canceled.

1. Press the button on the control panel.
2. Touch the “Settings” key.
3. Touch the ‘Phone & Bluetooth’ key.
4. Touch the ‘Connect New Device’ key.
5. Initiate the connecting process from the handset. The system will display the message: “Is PIN XXXXX displayed on your Bluetooth device?” If the PIN is displayed on your Bluetooth® device, select ‘Pair’ to complete the pairing process.

For additional information, refer to the Bluetooth® device’s Owner’s Manual.

VEHICLE PHONEBOOK

To access the vehicle phonebook:

1. Press the button on the control panel.
2. Touch the ‘Phonebook’ key.
3. Choose the desired entry from the displayed list.
4. The number of the entry will be displayed on the screen. Touch the number to initiate dialing.

NOTE:
To scroll quickly through the list, touch the “A-Z” key in the upper right corner of the screen. Turn the TUNE knob to choose a letter or number and then press AUDIO. The list will move to the first entry that begins with that number or letter.
MAKING A CALL
To make a call, follow the procedure below:

1. Press the \button on the control panel. The 'Phone' screen will appear on the display.

2. Select one of the following options to make a call:
   - 'Phonebook': Select the name from an entry stored in the vehicle phonebook.
   - 'Call Lists': Select the name from the incoming, outgoing or missed.
   - 'Redial': Dial the last outgoing call from the vehicle.
   - ": Input the phone number manually using a keypad displayed on the screen. For additional information, refer to 'How to use the touch-screen' in this section.

RECEIVING A CALL
When a call is placed to the connected phone, the display will change to phone mode.

To accept the incoming call, either:
- Press the \button on the steering wheel, or
- Touch the phone icon on the screen.

To reject the incoming call, either:
- Press the \button on the steering wheel, or
- Touch the phone icon on the screen.

DURING A CALL
While a call is active, the following options are available on the screen:
- "Handset"
Select this option to switch control of the phone call over to the handset.
- "Mute Mic."
Select this option to mute the microphone. Select again to unmute the microphone.
- Phone icon
Select to end the phone call.

ENDING A CALL
To end a phone call, select the phone icon on the screen or press the \button on the steering wheel.

TEXT MESSAGING (if so equipped)

WARNING
- Laws in some jurisdictions may restrict the use of "Text-to-Speech". Check local regulations before using this feature.
- Laws in some jurisdictions may restrict the use of some of the applications and features, such as social networking and texting. Check local regulations for any requirements.
- Use the text messaging feature after stopping your vehicle in a safe location. If you have to use the feature while driving, exercise extreme caution at all times so full attention may be given to vehicle operation.
- If you are unable to devote full attention to vehicle operation while using the text messaging feature, pull off the road to a safe location and stop your vehicle.
NOTE:
This feature is automatically disabled if the connected device does not support the Message Access Profile (MAP). For additional information, refer to the phone's Owner's Manual for details and instructions.

NOTE:
Many phones may require special permission to enable text messaging. Check the phone's screen during Bluetooth® pairing. For some phones, you may need to enable 'Notifications' in the phone's Bluetooth® menu for text messages to appear on the headunit. For additional information, refer to your phone's Owner's manual. Text message integration requires that the phone support MAP (Message Access Profile) for both receiving and sending text messages. Some phones may not support all text messaging features. For additional information, please refer to www.nissanusa.com/bluetooth or www.nissan.ca/bluetooth for compatibility information, as well as your device's Owner's manual.

The system allows for the sending and receiving of text messages through the vehicle interface.

**Sending a text message:**

1. Press the button on the steering wheel.
2. Say 'Phone' after the tone.
3. Say 'Send Text' after the tone.
4. The system will provide a list of available commands in order to determine the recipient of the text message. Choose from the following:
   - To (a name)
   - Enter Number
   - Missed Calls
   - Incoming Calls
   - Outgoing Calls

For additional information about these options, refer to 'Voice commands' in this section.

5. Once a recipient is chosen, the system prompts for which message to send. Nine predefined messages are available as well as three custom messages. To choose one of the predefined messages, speak one of the following after the tone:
   - 'Driving, can't text'
   - 'Call me'
   - 'On my way'
   - 'Running late'
   - 'Okay'
   - 'Yes'
   - 'No'
   - 'Where are you?'
   - 'When?'
   - 'Custom Messages'

To send one of the custom messages, say 'Custom Messages'. If more than one custom message is stored, the system will prompt for the number of the desired custom message. For additional information on setting and managing custom text messages, refer to 'Bluetooth® settings' in this section.
Reading a received text message:

1. Press the button on the steering wheel.
2. Say ‘Phone’ after the tone.
3. Say ‘Read Text’ after the tone.

The text message, sender and delivery time are shown on the screen. Use the tuning switch to scroll through all text messages if more than one are available. Press the button to exit the text message screen. Press the button to access the following options for replying to the text message:

- Call Back
  Speak this command to call the sender of the text message using the Bluetooth® Hands-Free Phone System.

- Send Text
  Speak this command to send a text message response to the sender of the text message.

- Read Text
  Speak this command to read the text message again.

- Previous Text
  Speak this command to move to the previous text message (if available).

- Next Text
  Speak this command to move to the next text message (if available).

Siri® Eyes Free

If a connected phone is equipped with Siri®, it can also be used to create custom messages that are sent through the phone. For additional information, refer to “Siri® Eyes Free” in this section.

NOTE:

Text messages are only displayed if the vehicle speed is less than 5 mph (8 km/h).

NOTE:

For Apple iPhones®, text messages can only be sent through Siri.
BLUETOOTH® SETTINGS

To access the phone settings:

1. Press the \ APP\ button.
2. Touch the “Settings” key.
3. Touch the ‘Phone & Bluetooth’ key.

PHONE SETTINGS

To access the phone settings:

1. Press the [APP] button.
2. Touch the ‘Settings’ key.
3. Touch the ‘Phone & Bluetooth’ key.
4. Touch the ‘Phone Settings’ key and adjust the following settings as desired:
   - Start Siri® by:
     Touch ‘Short Press’ or ‘Long Press’ to set how Siri® is operated on the steering wheel.
   - Sort Phonebook By:
     Touch ‘First Name’ or ‘Last Name’ to choose how phonebook entries are alphabetically displayed on the screen.
   - Use Phonebook From:
     Touch ‘Handset’ to use the phone’s phonebook. Touch ‘SIM’ to use the phonebook on the SIM card. Select ‘Both’ to use both sources.
   - Download Phonebook Now:
     Touch to download the phonebook to the vehicle from the chosen source.
   - Record Name for Phonebook Entry:
     Touch to record a name for a phonebook entry for use with the NISSAN Voice Recognition System.
   - Phone Notifications for:
     Touch ‘Driver’ to have phone notifications shown in the vehicle information display. Select ‘Both’ to have phone notifications shown in both the vehicle information display and the center display screen.
   - Text Messaging (if so equipped):
     Touch to toggle the text message functionality on or off.
   - Show Incoming Text for (if so equipped):
     Touch ‘Driver’ to have incoming text notifications shown in the vehicle information display. Touch ‘Both’ to have text notifications shown in both the vehicle information display and the center display screen. Touch ‘Off’ to turn off all text notifications.
   - Auto Reply (if so equipped):
     Touch to toggle the auto reply functionality on or off.
   - Auto Reply Message (if so equipped):
     Touch to indicate preferred message to be sent when ‘Auto Reply’ function is activated.
   - Use Vehicle’s Signature (if so equipped):
     Touch to toggle on or off the addition of the vehicle signature to outgoing messages.
   - Custom Text Messages (if so equipped):
     Touch this option to select a custom message to edit. There are 4 customer message slots available.
TROUBLESHOOTING GUIDE

The system should respond correctly to all voice commands without difficulty. If problems are encountered, try the following solutions.

Where the solutions are listed by number, try each solution in turn, starting with number 1, until the problem is resolved.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Solution</th>
</tr>
</thead>
</table>
| System fails to interpret the command correctly. | 1. Ensure that the command is valid. For additional information, refer to “Voice commands” in this section.  
2. Ensure that the command is spoken after the tone.  
3. Speak clearly without pausing between words and at a level appropriate to the ambient noise level in the vehicle.  
4. Ensure that the ambient noise level is not excessive (for example, windows open or defroster on). NOTE: If it is too noisy to use the phone, it is likely that the voice commands will not be recognized.  
5. If more than one command was said at a time, try saying the commands separately. |
| The system consistently selects the wrong entry from the phone book. | 1. Ensure that the phone book entry name requested matches what was originally stored. For additional information, refer to “Vehicle phonebook” in this section.  
2. Replace one of the names being confused with a new name.  
3. Please speak both first and last name of contact to improve recognition accuracy. |
NISSAN VOICE RECOGNITION SYSTEM (if so equipped)

The NISSAN Voice Recognition System allows hands-free operation of the systems equipped on this vehicle, such as the phone and navigation systems.

To operate NISSAN Voice Recognition, press the button located on the steering wheel. When prompted, speak the command for the system you wish to activate. The command given is picked up by the microphone and performed when it is properly recognized. NISSAN Voice Recognition will provide a voice response as well as a message in the center display to inform you of the command results.

USING THE SYSTEM

Initialization
When the ignition switch is in the ON position, NISSAN Voice Recognition is initialized, which takes a few seconds. When completed, the system is ready to accept voice commands. If the button is pressed before the initialization completes, the system will announce: “Voice Recognition System not ready. Please wait.”

Giving voice commands
1. Press the button.
2. The system announces: ‘Please say a category like phone or a command like points of interest followed by a brand name’. A list of available commands is then spoken by the system.
3. After the tone sounds and the face icon on the display changes, speak a command. Available commands are discussed in this section.
4. Voice and display feedback are provided when the command is accepted.
   - If the command is not recognized, the system announces: ‘Command not recognized’. Repeat the command in a clear voice.
   - If you want to cancel the command or go back to the previous menu of commands, press the button. The system will announce: “Canceling Voice Recognition” or “Go back” depending on the current menu level.
   - If you want to adjust the volume of the voice feedback, use the volume control switches on the steering wheel or the volume knob on the control panel.
   - The voice command screen can also be accessed using the control panel display:
     1. Press the [PROG] button.
     2. Touch the “Voice Commands” key.

Monitor, climate, audio, phone and voice recognition systems 4-101
Operating tips
To get the best performance out of NISSAN Voice Recognition, observe the following:

- Keep the interior of the vehicle as quiet as possible. Close the windows to eliminate the surrounding noises (traffic noises, vibration sounds, etc.), which may prevent the system from recognizing the voice commands correctly.
- Wait until a tone sounds before speaking a command. Otherwise, the command will not be received properly.
- Start speaking a command within 3.5 seconds after the tone sounds.
- Speak in a natural voice without pausing between words.

SYSTEM FEATURES
NISSAN Voice Recognition can activate the following systems:
- Bluetooth® Hands-Free Phone System
- Navigation
- Audio
- Information
- My Apps
- Help

For additional information, refer to the separate NissanConnect® Owner’s Manual.

How to say numbers
NISSAN Voice Recognition requires a certain way to speak numbers in voice commands. Refer to the following examples.

General rule: Either “zero” or “oh” can be used for “0”.

Phone numbers
Speak phone numbers according to the following example. For 1-800-662-6200, say dial number and then speak the phone number in any of the following formats:

- “one eight oh oh six six two six two oh oh”
- “one eight hundred six six two six two oh oh”
- “one eight zero zero six six two six two oh oh”

For the best voice recognition phone dialing results, say phone numbers as single digits. Also, full numbers can only be spoken for “800”. For example, you cannot say 555-6000 as “five five five six thousand”.

Monitor, climate, audio, phone and voice recognition systems
BLUETOOTH® HANDS-FREE
PHONE SYSTEM VOICE
COMMANDS

To access the Bluetooth® Hands-Free Phone System voice commands:

1. Press the \textit{\textcopyright} button.
2. Say “Call” and then a name in the vehicle phonebook to call that entry. Otherwise, say “Phone” to access various phone commands.

If the Bluetooth® has been set to “Off”, the system announces: “Bluetooth® is off. Would you like to turn Bluetooth® on?”

If no phone is connected to the system and the vehicle is stationary, the system announces: “There is no phone connected. Would you like to connect a phone now?” Say “Yes” to connect a phone. All further Bluetooth® Hands-Free Phone System voice commands are only available if a phone is connected.

If a phone is connected and Bluetooth® is set to “On”, the following voice commands are available:

- **Call (a name)**
  Speak the name of the contact in which you are trying to call. System will confirm correct contact. Say “Dial” to initiate dialing.

- **Dial Number**
  Allows for up to 24 digits to be dialed. After the number is entered, say “Dial” to initiate dialing. Say “Correction” to correct the number entered. Say “Go Back” to return to the main menu.

- **List Phonebook**
  Starting with the first alphabetical entry in the vehicle phonebook, the system prompts for an additional command. Say “Dial” to call the number of the phonebook entry. Say “Next Entry” to skip to the next alphabetical entry in the vehicle phonebook, where the same options will then be available.

- **Recent Calls**
  The system prompts for an additional command. Say “Missed Calls”, “Incoming Calls” or “Outgoing Calls” to display a list of such calls on the screen.
  Speak the number of the entry displayed on the screen to dial that number or say “Next Page” to view entries on the next page (if available).

- **Redial**
  Redials the last called number.

- **Read Text (if so equipped)**
  Reads an incoming text message. For additional information about text messaging with the Bluetooth® Hands-Free Phone System, refer to “Bluetooth® Hands-Free Phone System with Navigation System” in this section.

- **Send Text (if so equipped)**
  Sends a text message. For additional information about text messaging with the Bluetooth® Hands-Free Phone System, refer to “Bluetooth® Hands-Free Phone System with Navigation System” in this section.

\textit{Monitor, climate, audio, phone and voice recognition systems} \ 4-103
Select Phone

The system replies ‘Please use manual controls to continue’. Use manual controls to change the active phone from among the listed phones connected to the vehicle.

Siri (if so equipped)

The system replies ‘Starting Siri’. For additional information, refer to ‘Operating Siri ®Eyes Free’ in this section.

For additional information about the Bluetooth® Hands-Free Phone System, refer to “Bluetooth® Hands-Free Phone System with Navigation System” in this section.

NAVIGATION SYSTEM VOICE COMMANDS

The following voice commands are available for the navigation system:

- Street Address (address)
- Points of Interest (name)
- POI by Category
- Home
- Address Book
- Previous Destinations
- Enter Address in Steps
- Cancel Route

For additional information, refer to the separate NissanConnect® Owner’s Manual.

AUDIO SYSTEM VOICE COMMANDS

To access the audio system voice commands:

1. Press the button.
2. Say ‘Audio’
3. Speak a command from the following available commands:
   - Play (AM, FM, etc.)
     Allows user to select radio band
   - Tune AM (number)
     Allows user to tune directly to a desired AM frequency
   - Tune FM (number)
     Allows user to tune directly to a desired FM frequency
   - SXM channel (number)
     Allows user to tune directly to a desired SXM station (if so equipped)
   - CD Track (number)
     Allows user to select track to be played
   - Play Song (name)
     Allows user to select song name to be played
   - Play Artist (name)
     Allows user to select artist to be played
   - Play Album (name)
     Allows user to select album name to be played

For additional information, refer to ‘Audio system’ in this section.
INFORMATION VOICE COMMANDS

The following voice commands are available for the information functions of the navigation system:

- Traffic
- Fuel Prices
- Stocks
- Movie Listings
- Current Weather
- Weather Map
- 5—day Forecast
- 6—hour Forecast
- Connect to Voice Menu (if so equipped)
- Additional Commands

For additional information, refer to the separate NissanConnect® Owner's Manual.

MY APPS VOICE COMMANDS

Many Apps can be accessed using this voice command. For additional information, refer to the separate NissanConnect® Owners Manual.

HELP VOICE COMMANDS

The following voice commands can be spoken to have the system provide instructions and tips for using the NISSAN Voice Recognition System.

- List Commands
- What Can I Say?
- General Help
- Go Back
- Quit
- Exit
TROUBLESHOOTING GUIDE

The system should respond correctly to all voice commands without difficulty. If problems are encountered, follow the solutions given in this guide for the appropriate error. Where the solutions are listed by number, try each solution in turn, starting with number one, until the problem is resolved.

**PRECAUTIONS WHEN STARTING AND DRIVING**

**WARNING**

- Do not leave children or adults who would normally require the assistance of others alone in your vehicle. Pets should also not be left alone. They could accidentally injure themselves or others through inadvertent operation of the vehicle. Also, on hot, sunny days, temperatures in a closed vehicle could quickly become high enough to cause severe or possibly fatal injuries to people or animals.
- Closely supervise children when they are around cars to prevent them from playing and becoming locked in the trunk where they could be seriously injured. Keep the car locked, with the rear seatback and trunk lid securely latched when not in use, and prevent children’s access to car keys.

**EXHAUST GAS (carbon monoxide)**

**WARNING**

- Do not breathe exhaust gases; they contain colorless and odorless carbon monoxide. Carbon monoxide is dangerous. It can cause unconsciousness or death.
- If you suspect that exhaust fumes are entering the vehicle, drive with all windows fully open, and have the vehicle inspected immediately.
- Do not run the engine in closed spaces such as a garage.
- Do not park the vehicle with the engine running for any extended length of time.
- Keep the rear vent windows, liftgates, doors and trunk lids (if so equipped) closed while driving, otherwise exhaust gases could be drawn into the passenger compartment. If you must drive with one of these open, follow these precautions:
  1. Open all the windows.
  2. Set the air recirculation button to off and the fan control dial to high to circulate the air.
- If electrical wiring or other cable connections must pass to a trailer through the seal on the trunk lid or the body, follow the manufacturer's recommendation to prevent carbon monoxide entry into the vehicle.
- The exhaust system and body should be inspected by a qualified mechanic whenever:
  a. The vehicle is raised for service.
  b. You suspect that exhaust fumes are entering into the passenger compartment.
  c. You notice a change in the sound of the exhaust system.
  d. You have had an accident involving damage to the exhaust system, underbody, or rear of the vehicle.

**THREE-WAY CATALYST**

The three-way catalyst is an emission control device installed in the exhaust system. Exhaust gases in the three-way catalyst are burned at high temperatures to help reduce pollutants.

**WARNING**

- The exhaust gas and the exhaust system are very hot. Keep people, animals or flammable materials away from the exhaust system components.
Do not stop or park the vehicle over flammable materials such as dry grass, waste paper or rags. They may ignite and cause a fire.

CAUTION

- Do not use leaded gasoline. Deposits from leaded gasoline will seriously reduce the three-way catalyst’s ability to help reduce exhaust pollutants.
- Keep your engine tuned up. Malfunctions in the ignition, fuel injection, or electrical systems can cause overrich fuel flow into the three-way catalyst, causing it to overheat. Do not keep driving if the engine misfires, or if noticeable loss of performance or other unusual operating conditions are detected. Have the vehicle inspected promptly. It is recommended that you visit a NISSAN dealer for this service.
- Avoid driving with an extremely low fuel level. Running out of fuel could cause the engine to misfire, damaging the three-way catalyst.
- Do not race the engine while warming it up.

Do not push or tow your vehicle to start the engine.

TIRE PRESSURE MONITORING SYSTEM (TPMS)

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a Tire Pressure Monitoring System (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly underinflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on your vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.
Additional information:

- When replacing a wheel without the TPMS such as the spare tire, the TPMS does not monitor the tire pressure of the spare tire.
- The TPMS will activate only when the vehicle is driven at speeds above 16 mph (25 km/h). Also, this system may not detect a sudden drop in tire pressure (for example, a flat tire while driving).
- The low tire pressure warning light does not automatically turn off when the tire pressure of all your tires is adjusted. After the tires are inflated to the recommended pressure, the vehicle must be driven at speeds above 16 mph (25 km/h) to activate the TPMS and turn off the low tire pressure warning light. Use a tire pressure gauge to check the tire pressure.
- The "CHECK TIRE PRES" (Type A - if so equipped) or the "Tire Pressure Low-Add Air" (Type B - if so equipped) warning message is displayed in the odometer when the low tire pressure warning light is illuminated and low tire pressure is detected. The "CHECK TIRE PRES" (Type A - if so equipped) or the "Tire Pressure Low-Add Air" (Type B - if so equipped) warning message turns off when the low tire pressure warning light turns off. The low tire pressure warning light remains illuminated until the tires are inflated to the recommended COLD tire pressure. The "CHECK TIRE PRES" (Type A - if so equipped) or the "Tire Pressure Low-Add Air" (Type B - if so equipped) warning message is displayed each time the ignition switch is placed in the ON position as long as the low tire pressure warning light remains illuminated.
- The "CHECK TIRE PRES" (Type A - if so equipped) or the "Tire Pressure Low-Add Air" (Type B - if so equipped) warning is not displayed if the low tire pressure warning light illuminates to indicate a TPMS malfunction.
- Tire pressure rises and falls depending on the heat caused by the vehicle’s operation and the outside temperature. Do not reduce the tire pressure after driving because the tire pressure rises after driving. Low outside temperature can lower the temperature of the air inside the tire which can cause a lower tire inflation pressure. This may cause the low tire pressure warning light to illuminate. If the warning light illuminates, check the tire pressure for all four tires.
- The Tire and Loading Information label is located in the driver’s door opening. For additional information, refer to ‘Check tire pressure warning message’ or ‘Low tire pressure warning light’ in the ‘Instruments and controls’ section and ‘Tire Pressure Monitoring System (TPMS)’ in the ‘In case of emergency’ section of this manual.

For additional information, refer to ‘Check tire pressure warning message’ or ‘Low tire pressure warning light’ in the ‘Instruments and controls’ section and ‘Tire Pressure Monitoring System (TPMS)’ in the ‘In case of emergency’ section of this manual.

WARNING
- Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
• If the low tire pressure warning light illuminates while driving, avoid sudden steering maneuvers or abrupt braking, reduce vehicle speed, pull off the road to a safe location and stop the vehicle as soon as possible. Driving with under-inflated tires may permanently damage the tires and increase the likelihood of tire failure. Serious vehicle damage could occur and may lead to an accident and could result in serious personal injury. Check the tire pressure for all four tires. Adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label to turn the low tire pressure warning light off. If you have a flat tire, replace it with a spare tire as soon as possible. (For additional information on changing a flat tire, refer to "Flat tire" in the "In case of emergency” section of this manual.)

Some devices and transmitters may temporarily interfere with the operation of the TPMS and cause the low tire pressure warning light to illuminate. Some examples are:

- Facilities or electric devices using similar radio frequencies are near the vehicle.
- If a transmitter set to similar frequencies is being used in or near the vehicle.
- If a computer (or similar equipment) or a DC/AC converter is being used in or near the vehicle.

The low tire pressure warning light may illuminate in the following cases:

- If the vehicle is equipped with a wheel and tire without TPMS.
- If the TPMS has been replaced and the ID has not been registered.
- If the wheel is not originally specified by NISSAN.

Starting and driving 5-5
FCC Notice:

For USA:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For Canada:
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

TPMS with Easy-Fill Tire Alert (if so equipped)
When adding air to an under-inflated tire, the TPMS with Easy-Fill Tire Alert provides visual and audible signals outside the vehicle to help you inflate the tires to the recommended COLD tire pressure.

Vehicle set-up:
1. Park the vehicle in a safe and level place.
2. Apply the parking brake and place the shift lever in the P (Park) position (if so equipped).
3. Place the ignition switch in the ON position. Do not start the engine.

Operation:
1. Add air to the tire.
2. After a few seconds, the hazard indicators will start flashing.
3. When the designated pressure is reached, the horn beeps once and the hazard indicators stop flashing.
4. Perform the above steps for each tire.

- If the tire is over-inflated more than approximately 4 psi (30 kPa), the horn beeps and the hazard indicators flash three times. To correct the pressure, push the core of the valve stem on the tire briefly to release pressure. When the pressure reaches the designated pressure, the horn beeps once.
- If the hazard indicator does not flash within approximately 15 seconds after starting to inflate the tire, it indicates that the Easy-Fill Tire Alert is not operating.
- The TPMS will not activate the Easy-Fill Tire Alert under the following conditions:
  - If there is interference from an external device or transmitter.
  - The air pressure from the inflation device is not sufficient to inflate the tire.
  - There is a malfunction in the TPMS system.
  - There is a malfunction in the horn or hazard indicators.
  - The identification code of the tire's pressure sensor is not registered to the system.

5-6 Starting and driving
The battery of the tire pressure sensor is low.

- If the Easy-Fill Tire Alert does not operate due to TPMS interference, move the vehicle about 3 ft (1 m) backward or forward and try again.

If the Easy-Fill Tire Alert is not working, use a tire pressure gauge.

AVOIDING COLLISION AND ROLLOVER

**WARNING**

Failure to operate this vehicle in a safe and prudent manner may result in loss of control or an accident.

Be alert and drive defensively at all times. Obey all traffic regulations. Avoid excessive speed, high speed cornering, or sudden steering maneuvers, because these driving practices could cause you to lose control of your vehicle.

As with any vehicle, loss of control could result in a collision with other vehicles or objects or cause the vehicle to roll over, particularly if the loss of control causes the vehicle to slide sideways.

Be attentive at all times, and avoid driving when tired. Never drive when under the influence of alcohol or drugs (including prescription or over-the-counter drugs which may cause drowsiness). Always wear your seat belt as outlined in the “Safety – Seats, seat belts and supplemental restraint system” section of this manual, and also instruct your passengers to do so.

Seat belts help reduce the risk of injury in collisions and rollovers. In a rollover crash, an unbelted or improperly belted person is significantly more likely to be injured or killed than a person properly wearing a seat belt.

OFF-ROAD RECOVERY

While driving, the right side or left side wheels may unintentionally leave the road surface. If this occurs, maintain control of the vehicle by following the procedure below. Please note that this procedure is only a general guide. The vehicle must be driven as appropriate based on the conditions of the vehicle, road and traffic.

1. Remain calm and do not overreact.
2. Do not apply the brakes.
3. Maintain a firm grip on the steering wheel with both hands and try to hold a straight course.
4. When appropriate, slowly release the accelerator pedal to gradually slow the vehicle.
5. If there is nothing in the way, steer the vehicle to follow the road while vehicle speed is reduced. Do not attempt to drive the vehicle back onto the road surface until vehicle speed is reduced.
6. When it is safe to do so, gradually turn the steering wheel until both tires return to the road surface. When all tires are on the road surface, steer the vehicle to stay in the appropriate driving lane.

- If you decide that it is not safe to return the vehicle to the road surface based on vehicle, road or traffic conditions, gradually slow the vehicle to a stop in a safe place off the road.
RAPID AIR PRESSURE LOSS

Rapid air pressure loss or a ‘blow-out’ can occur if the tire is punctured or is damaged due to hitting a curb or pothole. Rapid air pressure loss can also be caused by driving on under-inflated tires.

Rapid air pressure loss can affect the handling and stability of the vehicle, especially at highway speeds.

Help prevent rapid air pressure loss by maintaining the correct air pressure and visually inspecting the tires for wear and damage. For additional information, refer to ‘wheels and tires’ in the ‘Do-it-yourself’ section of this manual. If a tire rapidly loses air pressure or ‘blows-out’ while driving, maintain control of the vehicle by following the procedure below. Please note that this procedure is only a general guide. The vehicle must be driven as appropriate based on the conditions of the vehicle, road and traffic.

### WARNING
If there is a sudden loss of tire air pressure, the vehicle will generally move or pull in the direction of the flat tire. In this situation, losing control of the vehicle may cause a collision and result in personal injury.

To help avoid loss of control:
- Do not rapidly apply the brakes.
- Do not rapidly release the accelerator pedal.
- Do not rapidly turn the steering wheel.

1. Remain calm and do not overreact.
2. Maintain a firm grip on the steering wheel with both hands and try to hold a straight course.
3. When appropriate, slowly release the accelerator pedal to gradually slow the vehicle.
4. Gradually steer the vehicle to a safe location off the road and away from traffic if possible.
5. Lightly apply the brake pedal to gradually stop the vehicle.
6. Turn on the hazard warning flashers and contact a roadside emergency service to change the tire. For additional information, refer to ‘Changing a flat tire’ in the ‘In case of emergency’ section of this manual.

DRINKING ALCOHOL/DRUGS AND DRIVING

### WARNING
Never drive under the influence of alcohol or drugs. Alcohol in the bloodstream reduces coordination, delays reaction time and impairs judgement. Driving after drinking alcohol increases the likelihood of being involved in an accident injuring yourself and others. Additionally, if you are injured in an accident, alcohol can increase the severity of the injury.
NISSAN is committed to safe driving. However, you must choose not to drive under the influence of alcohol. Every year thousands of people are injured or killed in alcohol-related collisions. Although the local laws vary on what is considered to be legally intoxicated, the fact is that alcohol affects all people differently and most people underestimate the effects of alcohol.

Remember, drinking and driving don’t mix! That is true for drugs (over-the-counter, prescription) and illegal drugs, too. Don’t drive if your ability to operate your vehicle is impaired by alcohol, drugs, or some other physical condition.

**WARNING**

Never remove or turn the key to the LOCK position while driving. The steering wheel will lock (for models with a steering lock mechanism). This may cause the driver to lose control of the vehicle and could result in serious vehicle damage or personal injury.

**CONTINUOUSLY VARIABLE TRANSMISSION (if so equipped)**

The ignition lock is designed so that the ignition switch cannot be turned to the LOCK position until the shift lever is moved to the P (Park) position.

- When moving the ignition switch to the LOCK position, make sure the shift lever is in the P (Park) position.
- When removing the key from the ignition switch, make sure the shift lever is in the P (Park) position.
When the ignition switch cannot be turned to the LOCK position:

1. Move the shift lever to the P (Park) position.
2. Turn the ignition switch slightly in the ON direction.
3. Turn the ignition switch to the LOCK position.
4. Remove the key if it is inserted in the ignition switch.

If the ignition switch is turned to the LOCK position, the shift lever cannot be moved from the P (Park) position.

The shift lever can be moved if the ignition switch is placed in the ON position and the foot brake pedal is depressed.

There is an OFF position between the LOCK and ACC positions. The OFF position is indicated by a “1” on the key cylinder.

In order for the steering wheel to be locked, it must be turned about 1/8 of a turn clockwise from the straight up position.

To lock the steering wheel, turn the key to the LOCK position. Remove the key. To unlock the steering wheel, insert the key and turn it gently while rotating the steering wheel slightly right and left.

IGNITION SWITCH POSITIONS
LOCK: Normal parking position (0)
OFF: (1)
The engine can be turned off without locking the steering wheel.
ACC: (Accessories) (2)
This position activates electrical accessories such as the radio when the engine is not running.
ON: Normal operating position (3)
This position turns on the ignition system and the electrical accessories.
START: (4)
This position starts the engine. As soon as the engine has started, release the key. It automatically returns to the ON position.

**MANUAL TRANSMISSION (M/T) (if so equipped)**

The ignition switch includes a device that helps prevent accidental removal of the key while driving.

The key can only be removed when the ignition switch is in the LOCK position.

On M/T models, to turn the ignition key to the LOCK position from the ACC or ON position, turn the key to the OFF position, push the key in, then turn the key to the LOCK position.
NISSAN VEHICLE IMMOBILIZER SYSTEM

The NISSAN Vehicle Immobilizer System will not allow the engine to start without the use of the registered key.

If the engine fails to start using a registered key (for example, when interference is caused by another registered key, an automated toll road device or automatic payment device on the key ring), restart the engine using the following procedure:

1. Leave the ignition switch in the ON position for approximately 5 seconds.
2. Place the ignition switch in the OFF or LOCK position, and wait approximately 10 seconds.
3. Repeat steps 1 and 2.
4. Restart the engine while holding the device (which may have caused the interference) separate from the registered key.

If the no start condition re-occurs, NISSAN recommends placing the registered key on a separate key ring to avoid interference from other devices.

**WARNING**

Do not operate the push-button ignition switch while driving the vehicle except in an emergency. (The engine will stop when the ignition switch is pushed three consecutive times in quick succession or the ignition switch is pushed and held for more than 2 seconds.) If the engine stops while the vehicle is being driven, this could lead to a crash and serious injury.

When the ignition switch is pushed without depressing the brake pedal or the clutch pedal for manual transmission (M/T) models, the ignition switch position will illuminate as follows:

Push center:
- Once to change to ACC.
- Two times to change to ON.
- Three times to return to OFF.

The ignition switch will automatically return to the LOCK position when any door is either opened or closed with the switch in the OFF position.

The ignition lock is designed so that the ignition switch position cannot be placed in the OFF position until the shift lever is moved to the P (Park) position or N (Neutral) position (M/T).

When the ignition switch cannot be pushed toward the OFF position, proceed as follows:

1. Move the shift lever into the P (Park) position or N (Neutral) position (M/T).
2. Push the ignition switch. The ignition switch position will change to the ON position.
3. Push the ignition switch again to the OFF position.

The shift lever can be moved from the P (Park) position if the ignition switch is in the ON position and the brake pedal is depressed.

If the battery of the vehicle is discharged, the ignition switch cannot be moved from the LOCK position.

Some indicators and warnings for operation are displayed in the meter. For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.

OPERATING RANGE

The Intelligent Key functions can only be used when the Intelligent Key is within the specified operating range.

When the Intelligent Key battery is almost discharged or strong radio waves are present near the operating location, the Intelligent Key system’s operating range becomes narrower and may not function properly.

If the Intelligent Key is within the operating range, it is possible for anyone, even someone who does not carry the Intelligent Key, to push the ignition switch to start the engine.

The operating range of the engine start function is inside of the vehicle.

- The luggage area is not included in the operating range, but the Intelligent Key may function.
- If the Intelligent Key is placed on the instrument panel or inside the glove box, storage bin or door pocket, the Intelligent Key may not function.
- If the Intelligent Key is placed near the door or window outside the vehicle, the Intelligent Key may function.

PUSH-BUTTON IGNITION SWITCH POSITIONS

LOCK (Normal parking position)

The ignition switch can only be locked in this position.

The ignition switch will be unlocked when it is pushed to the ACC position while carrying the Intelligent Key.

The ignition switch will lock when any door is opened or closed with the ignition switched off.
ACC (Accessories)
This position activates electrical accessories, such as the radio, when the engine is not running.
ACC has a battery saver feature that will turn the ignition switch to the OFF position after a period of time under the following conditions:
- All doors are closed.
- The shift lever is in P (Park).

ON (Normal operating position)
This position turns on the ignition system and electrical accessories.
ON has a battery saver feature that will turn the ignition switch to the OFF position, if the vehicle is not running, after some time under the following conditions:
- All doors are closed.
- The shift lever is in P (Park).
The battery saver feature will be canceled if any of the following occur:
- Any door is opened.
- The shift lever is moved out of the P (Park) position.
- The ignition switch changes position.

CAUTION
Do not leave the vehicle with the ignition switch in the ACC or ON position when the engine is not running for an extended period. This can discharge the battery.

OFF
The ignition switch is in the OFF position when the engine is turned off using the ignition switch. No lights will illuminate on the ignition switch.

EMERGENCY ENGINE SHUT OFF
To shut off the engine in an emergency situation while driving, perform the following procedure:
- Rapidly push the ignition switch three consecutive times in less than 1.5 seconds, or
- Push and hold the ignition switch for more than 2 seconds.

NISSAN INTELLIGENT KEY® BATTERY DISCHARGE
If the battery of the NISSAN Intelligent Key® is discharged, or environmental conditions interfere with the Intelligent Key operation, start the engine according to the following procedure:
1. Place the shift lever in the P (Park) position.
2. Firmly apply the foot brake.
3. Touch the ignition switch with the Intelligent Key as illustrated. (A chime will sound.)

Starting and driving 5-13
After Step 3 is performed, when the ignition switch is pushed without depressing the brake pedal, the ignition switch position will change to the ACC position.

4. Push the ignition switch while depressing the brake pedal within 10 seconds after the chime sounds. The engine will start.

**NOTE:**

- When the ignition switch is pushed to the ACC or ON position or the engine is started by the above procedure, the Intelligent Key battery discharge indicator appears in the vehicle information display even when the Intelligent Key is inside the vehicle. This is not a malfunction. To turn off the Intelligent Key battery discharge indicator, touch the ignition switch with the Intelligent Key again.

- If the Intelligent Key battery discharge indicator appears, replace the battery as soon as possible. For additional information, refer to “Battery replacement” in the “Do-it-yourself” section of this manual.

**NISSAN VEHICLE IMMOBILIZER SYSTEM**

The NISSAN Vehicle Immobilizer System will not allow the engine to start without the use of the registered key. If the engine fails to start using a registered key (for example, when interference is caused by another registered key, an automated toll road device or automatic payment device on the key ring), restart the engine using the following procedure:

1. Leave the ignition switch in the ON position for approximately 5 seconds.
2. Place the ignition switch in the OFF or LOCK position, and wait approximately 10 seconds.
3. Repeat steps 1 and 2.
4. Restart the engine while holding the device (which may have caused the interference) separate from the registered key.

If the no start condition re-occurs, NISSAN recommends placing the registered key on a separate key ring to avoid interference from other devices.

- Make sure the area around the vehicle is clear.
- Check fluid levels such as engine oil, coolant, brake and clutch fluid (if so equipped), and windshield-washer fluid as frequently as possible, or at least whenever you refuel.
- Check that all windows and lights are clean.
- Visually inspect tires for their appearance and condition. Also check tires for proper inflation.
- Lock all doors.
- Position seat and adjust head restraints/ headrests.
- Adjust inside and outside mirrors.
- Fasten seat belts and ask all passengers to do likewise.
- Check the operation of warning lights when the ignition switch is placed in the ON position. For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section of this manual.
STARTING THE ENGINE (models without NISSAN Intelligent Key® system)

1. Apply the parking brake.

2. Continuously Variable Transmission model:
   Move the shift lever to P (Park) or N (Neutral). P (Park) is recommended.
   The shift lever cannot be moved out of P (Park) and into any of the other gear positions if the ignition switch is turned to the OFF position or if the key is removed from the ignition switch.
   The starter is designed not to operate if the shift lever is in any of the driving positions.

   Manual transmission model:
   Move the shift lever to N (Neutral). Depress the clutch pedal to the floor while cranking the engine.
   The starter is designed not to operate unless the clutch pedal is fully depressed.
   The Intelligent Key must be carried when operating the ignition switch.

3. Crank the engine with your foot off the accelerator pedal by turning the ignition switch to the START position. Release the switch when the engine starts. If the engine starts, but fails to run, repeat the above procedure.
   • If the engine is very hard to start in extremely cold weather or when restarting, depress the accelerator pedal a little (approximately 1/3 to the floor) and hold it and then crank the engine. Release the switch and the accelerator pedal when the engine starts.
   • If the engine is very hard to start because it is flooded, depress the accelerator pedal all the way to the floor and hold it. Crank the engine for 5-6 seconds. After cranking the engine, release the accelerator pedal. Crank the engine with your foot off the accelerator pedal by turning the ignition switch to the START position. Release the key when the engine starts. If the engine starts, but fails to run, repeat the above procedure.

4. Warm-up
   Allow the engine to idle for at least 30 seconds after starting. Do not race the engine while warming it up. Drive at a moderate speed for a short distance first, especially in cold weather.

   NOTE:
   Care should be taken to avoid situations that can lead to potential battery discharge and potential no-start conditions such as:
   1. Installation or extended use of electronic accessories that consume battery power when the engine is not running (phone chargers, GPS, DVD players, etc.).
   2. The vehicle is not driven regularly and/or only driven short distances.

   In these cases, the battery may need to be charged to maintain battery health.

   STARTING AND DRIVING 5-15
1. Apply the parking brake.

2. **Continuously Variable Transmission:**
   
   Move the shift lever to P (Park) or N (Neutral). P (Park) is recommended.
   
   **The starter is designed not to operate if the shift lever is in any of the driving positions.**

3. **Manual Transmission (M/T):**
   
   Move the shift lever to N (Neutral). Depress the clutch pedal to the floor.

   **The starter is designed not to operate unless the clutch pedal is fully depressed.**

3. Push the ignition switch to the ON position. Depress the brake pedal and the clutch pedal (if so equipped) and push the ignition switch to start the engine.

   To start the engine immediately, push and release the ignition switch while depressing the brake pedal with the ignition switch in any position.

   - If the engine is very hard to start in extremely cold weather or when restarting, depress the accelerator pedal a little (approximately 1/3 to the floor) and while holding, crank the engine. Release the accelerator pedal when the engine starts.

   - If the engine is very hard to start because it is flooded, depress the accelerator pedal all the way to the floor and hold it. Push the ignition switch to the ON position to start cranking the engine. After 5 or 6 seconds, stop cranking by pushing the ignition switch to the LOCK position. After cranking the engine, release the accelerator pedal. Crank the engine with your foot off the accelerator pedal by depressing the brake pedal and pushing the ignition switch to start the engine. If the engine starts, but fails to run, repeat the above procedure.

   ∙ If the engine is very hard to start in extremely cold weather or when restarting, depress the accelerator pedal a little (approximately 1/3 to the floor) and while holding, crank the engine. Release the accelerator pedal when the engine starts.

   ∙ If the engine is very hard to start because it is flooded, depress the accelerator pedal all the way to the floor and hold it. Push the ignition switch to the ON position to start cranking the engine. After 5 or 6 seconds, stop cranking by pushing the ignition switch to the LOCK position. After cranking the engine, release the accelerator pedal. Crank the engine with your foot off the accelerator pedal by depressing the brake pedal and pushing the ignition switch to start the engine. If the engine starts, but fails to run, repeat the above procedure.

   ∙ If the engine is very hard to start in extremely cold weather or when restarting, depress the accelerator pedal a little (approximately 1/3 to the floor) and while holding, crank the engine. Release the accelerator pedal when the engine starts.

   ∙ If the engine is very hard to start because it is flooded, depress the accelerator pedal all the way to the floor and hold it. Push the ignition switch to the ON position to start cranking the engine. After 5 or 6 seconds, stop cranking by pushing the ignition switch to the LOCK position. After cranking the engine, release the accelerator pedal. Crank the engine with your foot off the accelerator pedal by depressing the brake pedal and pushing the ignition switch to start the engine. If the engine starts, but fails to run, repeat the above procedure.

4. **Warm-up**
   
   Allow the engine to idle for at least 30 seconds after starting. Do not race the engine while warming it up. Drive at a moderate speed for a short distance first, especially in cold weather. In cold weather, keep the engine running for a minimum of 2 - 3 minutes before shutting it off. Starting and stopping the engine over a short period of time may make the vehicle more difficult to start.

5. To stop the engine, move the shift lever to the P (Park) position or to N (Neutral) and apply the parking brake (M/T) and push the ignition switch to the OFF position.

**NOTE:**

Care should be taken to avoid situations that can lead to potential battery discharge and potential no-start conditions such as:

1. Installation or extended use of electronic accessories that consume battery power when the engine is not running (phone chargers, GPS, DVD players, etc.).

2. The vehicle is not driven regularly and/or only driven short distances. In these cases, the battery may need to be charged to maintain battery health.
CONTINUOUSLY VARIABLE TRANSMISSION (CVT) (if so equipped)

**WARNING**

- Do not depress the accelerator pedal while shifting from P (Park) or N (Neutral) to R (Reverse), D (Drive) or L (Low) (if so equipped). Always depress the brake pedal until shifting is completed. Failure to do so could cause you to lose control and have an accident.
- Cold engine idle speed is high, so use caution when shifting into a forward or reverse gear before the engine has warmed up.
- Do not downshift abruptly on slippery roads. This may cause a loss of control.
- Never shift to either the P (Park) or R (Reverse) position while the vehicle is moving forward and P (Park) or D (Drive) position while the vehicle is reversing. This could cause an accident or damage the transmission.

**CAUTION**

- Except in an emergency, do not shift to the N (Neutral) position while driving. Coasting with the transmission in the N (Neutral) position may cause serious damage to the transmission.
- To avoid possible damage to your vehicle, when stopping the vehicle on an uphill grade, do not hold the vehicle by depressing the accelerator pedal.

The CVT in your vehicle is electronically controlled to produce maximum power and smooth operation.

The recommended operating procedures for this transmission are shown on the following pages. Follow these procedures for maximum vehicle performance and driving enjoyment.

**NOTE:**

Engine power may be automatically reduced to protect the CVT if the engine speed increases quickly when driving on slippery roads or while being tested on some dynamometers.

**WARNING**

- Do not depress the accelerator pedal while shifting from P (Park) or N (Neutral) to R (Reverse), D (Drive) or L (Low) (if so equipped). Always depress the brake pedal until shifting is completed. Failure to do so could cause you to lose control and have an accident.
- Cold engine idle speed is high, so use caution when shifting into a forward or reverse gear before the engine has warmed up.
- Do not downshift abruptly on slippery roads. This may cause a loss of control.
- Never shift to either the P (Park) or R (Reverse) position while the vehicle is moving forward and P (Park) or D (Drive) position while the vehicle is reversing. This could cause an accident or damage the transmission.
Except in an emergency, do not shift to the N (Neutral) position while driving. Coasting with the transmission in the N (Neutral) position may cause serious damage to the transmission.

**CAUTION**

To avoid possible damage to your vehicle, when stopping the vehicle on an uphill grade, do not hold the vehicle by depressing the accelerator pedal. The foot brake should be used for this purpose.

1. After starting the engine, fully depress the foot brake pedal before moving the shift lever out of the P (Park) position.
2. Keep the foot brake pedal depressed and move the shift lever into a driving gear.
3. Release the foot brake, then gradually start the vehicle in motion.
4. Stop the vehicle completely before moving the shift lever into the P (Park) position.

The Continuously Variable Transmission is designed so the foot brake pedal MUST be depressed before shifting from P (Park) to any drive position while the ignition switch is in the ON position. The shift lever cannot be moved out of P (Park) and into any of the other gear positions if the ignition switch is placed in the LOCK, OFF or ACC position or if the key is removed.
To move the shift lever:

Press the button A while depressing the brake pedal
Press the button A to shift
Shift without pressing the button A

Type B (if so equipped)

Shifting

After starting the engine, fully depress the brake pedal and move the shift lever from P (Park) to any of the desired shift positions.

P (Park)

WARNING
Apply the parking brake if the shift lever is in any position while the engine is not running. Failure to do so could cause the vehicle to move unexpectedly or roll away and result in serious personal injury or property damage.

If the key is turned to the OFF or ACC position for any reason while the vehicle is in N (Neutral), or any drive position, the key cannot be turned to the LOCK position and be removed from the ignition switch. If this occurs, perform the following steps:

1. Apply the parking brake when the vehicle is stopped.
2. Move the shift lever to P (Park) to park the vehicle and turn the ignition switch to the LOCK position to remove the key.

R (Reverse)

CAUTION
To prevent transmission damage, use the R (Reverse) position only when the vehicle is completely stopped.

Use the R (Reverse) position to back up. Make sure the vehicle is completely stopped before selecting the R (Reverse) position. The brake pedal must be depressed and the shift lever button pressed in to move the shift lever from P (Park), N (Neutral) or any drive position to R (Reverse).

N (Neutral)

Neither forward nor reverse gear is engaged. The engine can be started in this position. You may shift to N (Neutral) and restart a stalled engine while the vehicle is moving.

Starting and driving 5-19
**D (Drive)**

Use this position for all normal forward driving.

**L (Low) (if so equipped)**

Use this position for maximum engine braking on steep downhill gradients/climbing steep slopes and whenever approaching sharp bends. Do not use the L (Low) position in any other circumstances.

**Manual shift mode (if so equipped)**

When the shift lever is in the manual shift gate, the transmission is ready for the manual shift mode. Shift ranges can be selected manually by moving the shift lever up or down. To cancel manual shift mode, return the shift lever to the D (Drive) position. The transmission returns to automatic driving mode.

When the shift lever is shifted from D (Drive) to the manual shift gate with the vehicle stopped or while driving, the transmission enters the manual shift mode. Shift ranges can be selected manually. In the manual shift mode, the shift range is displayed on the position indicator in the meter. When moving the shift lever to the manual shift gate, the position indicator displays 1 (1st) up to 7 (7th) depending on vehicle speed.

### Shift ranges

- 1⇔2⇔3⇔4⇔5⇔6⇔7

**M7 (7th)**

Use this position for all normal forward driving at highway speeds.

**M6 (6th) and M5 (5th)**

Use this position when driving up long slopes, or for engine braking when driving down long slopes.

**M4 (4th), M3 (3rd) and M2 (2nd)**

Use for hill climbing or engine braking on downhill grades.

**M1 (1st)**

Use this position when climbing steep hills slowly or driving slowly through deep snow, sand or mud, or for maximum engine braking on steep downhill grades.

- Remember not to drive at high speeds for extended periods of time in lower than 6 range. This reduces fuel economy.

### When shifting up

Move the shift lever to the + (up) side. (Shifts to higher range.)

### When shifting down

Move the shift lever to the – (down) side. (Shifts to lower range.)

- Moving the shift lever rapidly to the same side twice will shift the ranges in succession.
- The transmission will automatically downshift the gears. (For example, if you select the 3rd range, the transmission will shift down between the 3rd and 1st gears.)

### When canceling the manual shift mode

Return the shift lever to the D (Drive) position to return the transmission to the normal driving mode.

- In the manual shift mode, the transmission may not shift to the selected gear. This helps maintain driving performance and reduces the chance of vehicle damage or loss of control.
When this situation occurs, the Continuously Variable Transmission (CVT) position indicator light will blink and the chime will sound.

In the manual shift mode, the transmission may shift up automatically to a higher range than selected if the engine speed is too high. When the vehicle speed decreases, the transmission automatically shifts down and shifts to 1st gear before the vehicle comes to a stop.

CVT operation is limited to automatic drive mode when CVT fluid temperature is extremely low even if manual shift mode is selected. This is not a malfunction. When CVT fluid warms up, manual mode can be selected.

When the CVT fluid temperature is high, the shift range may upshift in lower rpm than usual. This is not a malfunction.

Shift lock release

If the battery charge is low or discharged, the shift lever may not be moved from the P (Park) position even with the brake pedal depressed and the shift lever button pressed.

It will be necessary to jump start or have your battery charged. For additional information, refer to ‘Jump starting’ in the ‘In case of emergency’ section of this manual. It is recommended that you contact a NISSAN dealer or a professional towing service.

To move the shift lever, complete the following procedure:

1. Push the ignition switch to the LOCK position.
2. Apply the parking brake.
3. Using a protective cloth on the tip of a 3 mm screwdriver, remove the shift lock release cover.
   • If available, a plastic trim tool can also be used.
4. Insert the small screwdriver in the shift lock release slot and push down.
5. Move the shift lever to the N (Neutral) position while holding down the shift lock release.
6. Push the ignition switch to the ON position to unlock the steering wheel. Now the vehicle may be moved to the desired location.

If the shift lever cannot be moved out of P (Park), have the transmission checked as soon as possible. It is recommended that you visit a NISSAN dealer for this service.
**WARNING**

If the shift lever cannot be moved from the P (Park) position while the engine is running and the brake pedal is depressed, the stop lights may not work. Malfunctioning stop lights could cause an accident injuring yourself and others.

---

Overdrive (O/D) OFF switch

When the O/D OFF switch is pushed with the shift lever in the D (Drive) position, the O/D OFF light in the instrument panel illuminates. For additional information, refer to “Overdrive OFF indicator light (CVT models)” in the “Instruments and controls” section of this manual.

Use the Overdrive OFF mode when you need improved engine braking.

To turn off the Overdrive OFF mode, push the O/D OFF switch again. The O/D OFF indicator light will turn off.

---

Each time the engine is started, or when the shift lever is shifted to any position other than D (Drive), the Overdrive OFF mode will be automatically turned off.

**Accelerator downshift**

— in D (Drive) position —

For passing or hill climbing, depress the accelerator pedal to the floor. This shifts the transmission down into a lower gear, depending on the vehicle speed.

**Fail-safe**

If the vehicle is driven under extreme conditions, such as excessive wheel spinning and subsequent hard braking, the fail-safe system may be activated. The Malfunction Indicator Light (MIL) may come on to indicate the fail-safe mode is activated. For additional information, refer to “Malfunction Indicator Light (MIL)” in the “Instruments and controls” section of this manual. This will occur even if all electrical circuits are functioning properly. In this case, place the ignition switch in the OFF position and wait for 10 seconds. Then push the switch back to the ON position. The vehicle should return to its normal operating condition. If it does not return to its
normal operating condition, have the transmission checked and repaired, if necessary. It is recommended that you visit a NISSAN dealer for this service.

**WARNING**

When the high fluid temperature protection mode or fail-safe operation occurs, vehicle speed may be gradually reduced. The reduced speed may be lower than other traffic, which could increase the chance of a collision. Be especially careful when driving. If necessary, pull to the side of the road at a safe place and allow the transmission to return to normal operation, or have it repaired if necessary.

**MANUAL TRANSMISSION (if so equipped)**

**WARNING**

- Do not downshift abruptly on slippery roads. This may cause a loss of control.
- Do not over-rev the engine when shifting to a lower gear. This may cause a loss of control or engine damage.

**CAUTION**

- Do not shift to the N (Neutral) position while driving. Doing so may result in an accident due to loss of engine braking.
- Do not rest your foot on the clutch pedal while driving. This may cause clutch damage.
- Fully depress the clutch pedal before shifting to help prevent transmission damage.
- Stop your vehicle completely before shifting into R (Reverse).
- When the vehicle is stopped with the engine running (for example, at a stop light), shift to N (Neutral) and release the clutch pedal with the foot brake applied.
- Do not shift to the N (Neutral) position while driving. Doing so may result in an accident due to loss of engine braking.

**Shifting**

To change gears or when upshifting or downshifting, depress the clutch pedal fully, shift into the appropriate gear, then release the clutch slowly and smoothly.

To ensure smooth gear changes, fully depress the clutch pedal before operating the shift lever. If the clutch pedal is not fully depressed before the transmission is shifted, a gear noise may be heard. Transmission damage may occur.

Start the vehicle in 1st gear and shift to 2nd, 3rd, 4th and 5th up to 6th gear in sequence according to vehicle speed.

**Starting and driving**  5-23
To back up, lift up on the shift lever ring ① and then move it to the R (Reverse) position after stopping the vehicle completely.

The shift lever ring ① returns to its original position when the shift lever is moved to the N (Neutral) position.

If it is difficult to move the shift lever into R (Reverse) or 1 (1st), shift into N (Neutral), then release the clutch pedal. Depress the clutch pedal again and shift into R (Reverse) or 1 (1st).

**Suggested up-shift speeds**

The following are suggested vehicle speeds for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual upshift speeds will vary according to road conditions, the weather and individual driving habits.

**MRA8DE engine models (6 M/T)**

<table>
<thead>

<td>35 (56)</td>
</tr>
<tr>
<td>5th to 6th</td>
<td>42 (68)</td>
</tr>
</tbody>
</table>

**Suggested maximum speed in each gear**

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.

Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits, and drive according to the road conditions, which will ensure safe operation. Do not over-rev the engine when shifting to a lower gear as it may cause engine damage or loss of vehicle control.

WARNING

- Be sure the parking brake is fully released before driving. Failure to do so can cause brake failure and lead to an accident.
- Do not release the parking brake from outside the vehicle.
- Do not use the shift lever in place of the parking brake. When parking, be sure the parking brake is fully engaged.
- To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

To engage: Pull the lever up A.

To release:
1. Firmly apply the foot brake.
2. Manual transmission models:
   Place the shift lever in the N (Neutral) position.

   Continuously Variable Transmission models:
   Move the shift lever to the P (Park) position.
3. While pulling up on the parking brake lever slightly, press the button and lower completely B.
4. Before driving, be sure the brake warning light goes out.
The SPORT mode switch adjusts the throttle sensitivity and transmission points to enhance performance. Push the SPORT mode switch on the instrument panel to activate. The SPORT mode indicator light (on the speedometer) will illuminate. The SPORT mode indicator light will remain lit while the mode is active.

**NOTE:**
In the SPORT mode, fuel economy may be reduced.

The ECO mode helps to enhance the fuel economy by controlling the throttle sensitivity and transmission points.

To turn on the ECO mode, push the ECO mode switch. The ECO mode indicator light (on the meter or vehicle information display) will remain lit while the mode is active.

To turn off the ECO mode, push the ECO mode switch again. The ECO mode indicator light (on the meter or vehicle information display) will turn off.

**NOTE:**
Selecting this drive mode will not necessarily improve fuel economy as many driving factors influence its effectiveness.

The ECO mode cannot be turned off while the accelerator pedal is depressed, even if the ECO mode switch is pushed off. Release the accelerator pedal to turn off the ECO mode. The ECO mode will turn off automatically if a malfunction occurs in the system.

Turn off the ECO mode, or depress the accelerator pedal fully when:
- Driving with a heavy load of passengers or cargo in the vehicle
- Driving on a steep uphill slope
- ECO mode may affect air conditioner performance

**NOTE:**
Selecting this drive mode will not necessarily improve fuel economy as many driving factors influence its effectiveness.
SHIFT LEVER INDICATOR (MRA8DE engine Manual Transmission models only)

The shift lever indicator is used to support the suitable timing of gear change. It operates only when the ECO mode is on.

The shift indicator icon and recommended gear position are displayed.

The shift indicator icon indicates when to upshift or downshift for fuel economy.

NOTE:
• The shift indicator is a guide for fuel economy. Always pay attention to road conditions and other traffic.
• Downshift the indicator icon to the 1 (1st) position if not displayed.
• If the downshifting icon is displayed when decreasing your vehicle speed, it indicates that the engine speed is low compared to the gear position.

WARNING
Failure to follow the warnings and instructions for proper use of the BSW system could result in serious injury or death.

• The BSW system is not a replacement for proper driving procedures and is not designed to prevent contact with vehicles or objects. When changing lanes, always use the side and rear mirrors and turn and look in the direction your vehicle will move to ensure it is safe to change lanes. Never rely solely on the BSW system.

The BSW system helps alert the driver of other vehicles in adjacent lanes when changing lanes.

Starting and driving
The BSW system uses radar sensors ① installed near the rear bumper to detect other vehicles in an adjacent lane.

Detection zone
The radar sensors can detect vehicles on either side of your vehicle within the detection zone shown as illustrated. This detection zone starts from the outside mirror of your vehicle and extends approximately 10 ft (3.0 m) behind the rear bumper, and approximately 10 ft (3.0 m) sideways.
BSW SYSTEM OPERATION

The BSW system operates above approximately 20 mph (32 km/h).

If the radar sensors detect a vehicle in the detection zone, the side BSW/RCTA indicator light (1) illuminates. If the turn signal is then activated, the system chimes (twice) and the side BSW/RCTA indicator light flashes. The BSW indicator light continues to flash until the detected vehicles leaves the detection zone.

The side BSW/RCTA indicator light illuminates for a few seconds when the ignition switch is placed in the ON position.

The brightness of the side BSW/RCTA indicator light is adjusted automatically depending on the brightness of the ambient light.

If a vehicle comes into the detection zone after the driver activates the turn signal, then only the side BSW/RCTA indicator light flashes and no chime sounds. For additional information, refer to "BSW driving situations" in this section.
HOW TO ENABLE/DISABLE THE BSW SYSTEM

Perform the following steps to enable or disable the BSW system.

1. Press the button until “Settings” displays in the vehicle information display. Use the button to select “Driver Assistance.” Then press the ENTER button.

2. Select “Driving Aids” and press the ENTER button.

3. Select “Blind Spot/RCTA” and press the ENTER button.

NOTE:

- When enabling/disabling the system, the system will retain current settings even if the engine is restarted.
- The RCTA system (if so equipped) is integrated into the BSW system. There is not a separate selection in the vehicle information display for the RCTA system. When the BSW is disabled, the RCTA system is also disabled.
When the BSW system is turned on, the BSW/RCTA indicator (white) in the vehicle information display illuminates.

BSW SYSTEM LIMITATIONS

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Listed below are the system limitations for the BSW system. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.</td>
</tr>
</tbody>
</table>

- The BSW system cannot detect all vehicles under all conditions.
- The radar sensors may not be able to detect and activate BSW when certain objects are present such as:
  - Pedestrian, bicycles, animals.
  - Vehicles such as motorcycles, low height vehicles, or high ground clearance vehicles.
  - Oncoming vehicles.
  - Vehicles remaining in the detection zone when you accelerate from a stop.

- A vehicle merging into an adjacent lane at a speed approximately the same as your vehicle.
- A vehicle approaching rapidly from behind.
- A vehicle which your vehicle overtakes rapidly.
- A vehicle that passes through the detection zone quickly.
- When overtaking several vehicles in a row, the vehicles after the first vehicle may not be detected if they are traveling close together.

- The radar sensors’ detection zone is designed based on a standard lane width. When driving in a wider lane, the radar sensors may not detect vehicles in an adjacent lane. When driving in a narrower lane, the radar sensors may detect vehicles driving two lanes away.

- The radar sensors are designed to ignore most stationary objects; however, objects such as guardrails, walls, foliage and parked vehicles may occasionally be detected. This is a normal operation condition.

- The following conditions may reduce the ability of the radar to detect other vehicles:
  - Severe weather
  - Road spray
  - Ice/frost/dirt build-up on the vehicle

- Do not attach stickers (including transparent material), install accessories or apply additional paint near the radar sensors. These conditions may reduce the ability of the radar to detect other vehicles.

- Excessive noise (for example, audio system volume, open vehicle window) will interfere with the chime sound, and it may not be heard.
Another vehicle approaching from behind

**Illustration 1:** The side BSW/RCTA indicator light illuminates if a vehicle enters the detection zone from behind in an adjacent lane.

**Illustration 2:** If the driver activates the turn signal when another vehicle is in the detection zone, then the system chimes (twice) and the side indicator light flashes.

**NOTE:**
- The radar sensors may not detect vehicles which are approaching rapidly from behind.
- If the driver activates the turn signal before a vehicle enters the detection zone, the side indicator light will flash but no chime will sound when the other vehicle is detected.
Overtaking another vehicle

Illustration 3: The side indicator light illuminates if you overtake a vehicle and that vehicle stays in the detection zone for approximately 2 seconds.

Illustration 4: If the driver activates the turn signal while another vehicle is in the detection zone, then the system chimes (twice) and the side indicator light flashes.

NOTE:
- When overtaking several vehicles in a row, the vehicles after the first vehicle may not be detected if they are traveling close together.
- The radar sensors may not detect slower moving vehicles if they are passed quickly.

Starting and driving 5-33
Entering from the side

Illustration 5: The side indicator light illuminates if a vehicle enters the detection zone from either side.

Illustration 6: If the driver activates the turn signal while another vehicle is in the detection zone, then the system chimes (twice) and the side indicator light flashes.

NOTE:

- If the driver activates the turn signal before a vehicle enters the detection zone, the side indicator light will flash but no chime will sound when the other vehicle is detected.

- The radar sensors may not detect a vehicle which is traveling at about the same speed as your vehicle when it enters the detection zone.
When radar blockage is detected, the system will be deactivated automatically. The 'Side Radar Obstruction' warning message will appear and the BSW/RCTA indicator (white) will blink A in the vehicle information display.

The system is not available until the conditions no longer exist.

The radar sensors may be blocked by temporary ambient conditions such as splashing water, mist or fog. The blocked condition may also be caused by objects such as ice, frost or dirt obstructing the radar sensors.

NOTE:
If the BSW system stops working, the RCTA system (if so equipped) will also stop working.

Action to take:
When the above conditions no longer exist, the system will resume automatically.
Malfunction
If the BSW system malfunctions, it will turn off automatically. The system malfunction warning message with the BSW/RCTA indicator (orange) will appear in the vehicle information display.

NOTE:
If the BSW system stops working, the RCTA system (if so equipped) will also stop working.

Action to take:
Stop the vehicle in a safe location, turn the engine off and restart the engine. If the message continues to appear, have the system checked. It is recommended that you visit a NISSAN dealer for this service.

SYSTEM MAINTENANCE
The two radar sensors ① for the BSW and RCTA systems are located near the rear bumper. Always keep the area near the radar sensors clean.
The radar sensors may be blocked by temporary ambient conditions such as splashing water, mist or fog.
The blocked condition may also be caused by objects such as ice, frost or dirt obstructing the radar sensors.
Check for and remove objects obstructing the area around the radar sensors.

Do not attach stickers (including transparent material), install accessories or apply additional paint near the radar sensors.
Do not strike or damage the area around the radar sensors. It is recommended that you visit a NISSAN dealer if the area around the radar sensors is damaged due to a collision.

Radio frequency statement
For USA
FCC: OAYSSRR2B
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Warning
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.
For Canada
Applicable law: Canada 310
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
Frequency bands: 24.05GHz – 24.25GHz
Output power: less than 20 milliwatts

**WARNING**
Failure to follow the warnings and instructions for proper use of the RCTA system could result in serious injury or death.
- The RCTA system is not a replacement for proper driving procedures and is not designed to prevent contact with vehicles or objects. When backing out of a parking space, always use the side and rear mirrors and turn and look in the direction your vehicle will move. Never rely solely on the RCTA system.

The RCTA system will assist you when backing out from a parking space. When the vehicle is in reverse, the system is designed to detect other vehicles approaching from the right or left of the vehicle. If the system detects cross traffic, it will alert you.
RCTA SYSTEM OPERATION

The RCTA system can help alert the driver of an approaching vehicle when the driver is backing out of a parking space. When the shift position is in R (Reverse) and the vehicle speed is less than approximately 5 mph (8 km/h), the RCTA system is operational.

If the radar detects an approaching vehicle from either side, the system chimes (once) and the side BSW/RCTA indicator light flashes on the side the vehicle is approaching from.
The RCTA system uses radar sensors ① installed on both sides near the rear bumper to detect an approaching vehicle.

The radar sensors ① can detect an approaching vehicle from up to approximately 66 ft (20 m) away.
HOW TO ENABLE/DISABLE THE RCTA SYSTEM

Perform the following steps to enable or disable the RCTA system.

1. Press the button until ‘Settings’ displays in the vehicle information display. Use the button to select ‘Driver Assistance.’ Then press the ENTER button.

2. Select ‘Driving Aids’ and press the ENTER button.

3. Select ‘Blind Spot/RCTA’ and press the ENTER button.

When the RCTA system is turned on, the BSW/RCTA indicator (white) in the vehicle information display illuminates.

NOTE:

- The RCTA system is integrated into the BSW system. There is not a separate selection in the vehicle information display for the RCTA system. When the BSW is disabled, the RCTA system is also disabled.
- When enabling/disabling the system, the system setting will be retained even if the engine is restarted.
RCTA SYSTEM LIMITATIONS

**WARNING**

Listed below are the system limitations for the RCTA system. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.

- Always check surroundings and turn to check what is behind you before backing up. The radar sensors detect approaching (moving) vehicles. The radar sensors cannot detect every object such as:
  - Pedestrians, bicycles, motorcycles, animals or child-operated toy vehicles
  - A vehicle that is passing at speeds greater than approximately 19 mph (30 km/h)
  - A vehicle that is passing at speeds lower than approximately 5 mph (8 km/h)

- The radar sensors may not detect approaching vehicles in certain situations:
  - Illustration a: When a vehicle parked next to you obstructs the beam of the radar sensor.

Starting and driving  5-41
- Illustration b: When the vehicle is parked in an angled parking space.
- Illustration c: When the vehicle is parked on inclined ground.
- Illustration d: When an approaching vehicle turns into your vehicle’s parking lot aisle.
- Illustration e: When the angle formed by your vehicle and approaching vehicle is small.

The following conditions may reduce the ability of the radar to detect other vehicles:
- Severe weather
- Road spray
- Ice/frost/dirt build-up on the vehicle

Do not attach stickers (including transparent material), install accessories or apply additional paint near the radar sensors. These conditions may reduce the ability of the radar to detect other vehicles.

Excessive noise (e.g., audio system volume, open vehicle window) will interfere with the chime sound, and it may not be heard.

NOTE:
In the case of several vehicles approaching in a row (Illustration 1) or in the opposite direction (Illustration 2), a chime may not be sounded by the RCTA system after the first vehicle passes the sensors.
When radar blockage is detected, the system will be deactivated automatically. The “Side Radar Obstruction” warning message will appear and the BSW/RCTA indicator (white) will blink A in the vehicle information display.

The systems are not available until the conditions no longer exist.

The radar sensors may be blocked by temporary ambient conditions such as splashing water, mist or fog.

The blocked condition may also be caused by objects such as ice, frost or dirt obstructing the radar sensors.

**NOTE:**
If the BSW system stops working, the RCTA system will also stop working.

**Action to take**
When the above conditions no longer exist, the system will resume automatically.
Malfunction
When the RCTA system malfunctions, it will turn off automatically. The system malfunction warning message with the BSW/RCTA indicator (orange) will appear in the vehicle information display.

NOTE:
If the BSW system stops working, the RCTA system (if so equipped) will also stop working.

Action to take
Stop the vehicle in a safe location, turn the engine off and restart the engine. If the message continues to appear, have the system checked. It is recommended that you visit a NISSAN dealer for this service.

SYSTEM MAINTENANCE
The two radar sensors ① for the BSW and RCTA systems are located near the rear bumper. Always keep the area near the radar sensors clean.

The radar sensors may be blocked by temporary ambient conditions such as splashing water, mist or fog.

The blocked condition may also be caused by objects such as ice, frost or dirt obstructing the radar sensors.

Check for and remove objects obstructing the area around the radar sensors.

Do not attach stickers (including transparent material), install accessories or apply additional paint near the radar sensors.

Do not strike or damage the area around the radar sensors. It is recommended that you visit a NISSAN dealer if the area around the radar sensors is damaged due to a collision.

Frequency bands: 24.05GHz – 24.25GHz
Output power: less than 20 milliwatts

CRUISE CONTROL (if so equipped)

PRECAUTIONS ON CRUISE CONTROL

1. CANCEL switch
2. ACCEL/RES switch
3. COAST/SET switch
4. ON/OFF switch

Type A (if so equipped)

Type B (if so equipped)

- If the cruise control system malfunctions, it cancels automatically. The CRUISE or indicator light in the instrument panel then blinks to warn the driver. For additional information, refer to ‘Warning lights, indicator lights and audible reminders’ or ‘Vehicle information display’ in the ‘Instruments and controls’ section of this manual.

- If the CRUISE or indicator light blinks, push the ON/OFF switch off and have the system checked. It is recommended that you visit a NISSAN dealer for this service.

Starting and driving 5-45
• The CRUISE or \( \text{\textbullet} \) indicator light may blink when the ON/OFF switch is pushed ON while pushing the ACCEL/RES, COAST/SET, or CANCEL switch. To properly set the cruise control system, use the following procedures.

**WARNING**
Do not use the cruise control when driving under the following conditions:

• When it is not possible to keep the vehicle at a set speed.
• In heavy traffic or in traffic that varies in speed.
• On winding or hilly roads.
• On slippery roads (rain, snow, ice, etc.).
• In very windy areas.

Doing so could cause a loss of vehicle control and result in an accident.

**CRUISE CONTROL OPERATIONS**

The cruise control allows driving at a speed between 25 - 89 mph (40 - 144 km/h) without keeping your foot on the accelerator pedal.

**To turn on the cruise control**, push the ON/OFF switch. The CRUISE or \( \text{\textbullet} \) indicator light in the instrument panel comes on.

**To set cruising speed**, accelerate the vehicle to the desired speed, push the COAST/SET switch and release it. Take your foot off the accelerator pedal. Your vehicle maintains the set speed.

• To pass another vehicle, depress the accelerator pedal. When you release the pedal, the vehicle returns to the previously set speed.
• The vehicle may not maintain the set speed when going up or down steep hills. If this happens, drive without the cruise control.

**To cancel the preset speed**, use one of the following three methods:

• Push the CANCEL switch, or
• Tap the brake pedal, or
• Push the ON/OFF switch off. The CRUISE or \( \text{\textbullet} \) indicator light in the instrument panel goes out.

The cruise control is automatically canceled if:

• You depress the brake or clutch pedal while pushing the ACCEL/RES or SET/COAST switch. The preset speed is deleted from memory.
• The vehicle slows down more than 8 mph (13 km/h) below the set speed.
• You depress the clutch pedal for manual transmission models (M/T), or move the shift lever to N (Neutral) (Continuously Variable Transmission).

**To reset at a faster cruising speed**, use one of the following three methods:

• Depress the accelerator pedal. When the vehicle attains the desired speed, push and release the COAST/SET switch.
• Push and hold the ACCEL/RES switch. When the vehicle attains the speed you desire, release the switch.
• Push and release the ACCEL/RES switch. Each time you do this, the set speed increases by about 1 mph (1.6 km/h).
To reset at a slower cruising speed, use one of the following three methods:

- Lightly tap the brake pedal. When the vehicle attains the desired speed, push the COAST/SET switch and release it.
- Push and hold the COAST/SET switch. Release the switch when the vehicle slows to the desired speed.
- Push and release the COAST/SET switch. Each time you do this, the set speed decreases by about 1 mph (1.6 km/h).

To resume the preset speed, push and release the ACCEL/RES switch. The vehicle returns to the last set cruising speed when the vehicle speed is over 25 mph (40 km/h).

**WARNING**

Failure to follow the warnings and instructions for proper use of the ICC system could result in serious injury or death.

- The ICC system is only an aid to assist the driver and is not a collision warning or avoidance device. It is the driver's responsibility to stay alert, drive safely and be in control of the vehicle at all times.
- Always observe posted speed limits and do not set the speed over them.
- Always drive carefully and attentively when using the ICC system. Read and understand the Owner's Manual thoroughly before using the ICC system. To avoid serious injury or death, do not rely on the system to prevent accidents or to control the vehicle's speed in emergency situations. Do not use the ICC system except in appropriate road and traffic conditions.

The ICC system is intended to enhance the operation of the vehicle when following a vehicle traveling in the same lane and direction.

The ICC system uses a radar sensor located on the front of the vehicle to detect vehicles traveling ahead.

If the radar sensor detects a slower moving vehicle ahead, the system will reduce the vehicle speed so that your vehicle follows the vehicle in front at the selected distance. The detection range of the sensor is approximately 390 ft (120 m) ahead.

Starting and driving 5-47
ICC SYSTEM OPERATION

The ICC system maintains a selected distance from the vehicle in front of you within the speed range 0 to 90 mph (0 to 144 km/h) up to the set speed. The set speed can be selected by the driver between 20 to 90 mph (32 to 144 km/h), based on road conditions.

The vehicle travels at the set speed when the road ahead is clear.

The ICC system is designed to maintain a selected distance from the vehicle in front of you and can reduce the speed to match a slower vehicle ahead. The system will decelerate the vehicle as necessary and if the vehicle ahead comes to a stop, the vehicle decelerates to a standstill. However, the ICC system can only apply up to 40% of the vehicle’s total braking power.

This system should only be used when traffic conditions allow vehicle speeds to remain fairly constant or when vehicle speeds change gradually. If a vehicle moves into the traveling lane ahead or if a vehicle traveling ahead rapidly decelerates, the distance between vehicles may become closer because the ICC system cannot decelerate the vehicle quickly enough. If this occurs, the ICC system will sound a
warning chime and blink the system display to notify the driver to take necessary action.

For additional information, refer to “Approach warning” in this section.

The following items are controlled in the ICC system:

- When there are no vehicles traveling ahead, the ICC system maintains the speed set by the driver. The set speed range is between approximately 20 and 90 mph (32 and 144 km/h).

- When there is a vehicle traveling ahead, the ICC system adjusts the speed to maintain the distance, selected by the driver, from the vehicle ahead. If the vehicle ahead comes to a stop, the vehicle decelerates to a standstill within the limitations of the system. The system will cancel once it judges a standstill with a warning chime.

- When the vehicle traveling ahead has moved out from its lane of travel, the ICC system accelerates and maintains vehicle speed up to the set speed.

The ICC system does not control vehicle speed or warn you when you approach stationary and slow moving vehicles. You must pay attention to vehicle operation to maintain proper distance from vehicles ahead when approaching toll gates or traffic congestion.

When driving on the freeway at a set speed and approaching a slower traveling vehicle ahead, the ICC system will adjust the speed to maintain the distance, selected by the driver, from the vehicle ahead. If the vehicle ahead changes lanes or exits the freeway, the ICC system will accelerate and maintain the speed up to the set speed. Pay attention to the driving operation to maintain control of the vehicle as it accelerates to the set speed.

Normally when controlling the distance to a vehicle ahead, this system automatically accelerates or decelerates your vehicle according to the speed of the vehicle ahead.
Depress the accelerator to properly accelerate your vehicle when acceleration is required for a lane change. Depress the brake pedal when deceleration is required to maintain a safe distance to the vehicle ahead due to its sudden braking or if a vehicle cuts in. Always stay alert when using the ICC system.

THE ICC SWITCH

The system is operated by the CRUISE ON/OFF switch and four control switches, all mounted on the steering wheel.

1. CANCEL switch:
   Deactivates the system without erasing the set speed.

2. ACCEL/RES switch:
   Resumes set speed or increases speed incrementally.

3. COAST/SET switch:
   Sets desired cruise speed or reduces speed incrementally.

4. DISTANCE switch:
   Changes the vehicle's following distance:
   • Long
   • Middle
   • Short

5. CRUISE ON/OFF switch:
   Master switch to activate the system.
The ICC system display and indicators

The display is located between the speedometer and tachometer.

1. Set vehicle speed indicator:
   - Indicates the set vehicle speed.
   - For Canadian models, the speed is displayed in km/h.

2. CRUISE ON/OFF switch indicator:
   - ICC system ON indicator (white): Indicates that the CRUISE ON/OFF switch is ON.
   - ICC system SET indicator (green): Indicates that the cruising speed is set.
   - ICC system warning (orange): Indicates that there is a malfunction in the ICC system.

3. Set distance indicator:
   - Displays the selected distance between vehicles set with the distance switch.

4. Vehicle ahead detection indicator:
   - Indicates whether it detects a vehicle in front of you.

Operating ICC

To turn on the cruise control, quickly push and release the CRUISE ON/OFF switch A. The ICC system ON indicator (white), set distance indicator and set vehicle speed indicator come on in a standby state for setting.
To set cruising speed, accelerate your vehicle to the desired speed, push the COAST/SET switch and release it. The ICC system set indicator (green), vehicle ahead detection indicator, set distance indicator and set vehicle speed indicator \( \text{①} \) will come on. Take your foot off the accelerator pedal. Your vehicle will maintain the set speed.

When the COAST/SET switch is pushed under the following conditions, the system cannot be set and the ICC indicators will blink for approximately 2 seconds:
- When traveling below 20 mph (32 km/h) and a vehicle ahead is not detected
- When the shift lever is not in the D (Drive) or L (Low) (if so equipped) position
- When the parking brake is applied
- When the brakes are operated by the driver

When the COAST/SET switch is pushed under the following conditions, the system cannot be set.

A warning chime will sound and a message will pop up:
- When the VDC system is off (To use the ICC system, turn on the VDC system. Push the CRUISE ON/OFF switch to turn off the ICC system and reset the ICC switch by pushing the CRUISE ON/OFF switch again.)
- When ABS or VDC is operating
- When a wheel is slipping (To use the ICC system, make sure the wheels are no longer slipping. Push the CRUISE ON/OFF switch to turn off the ICC system, and reset the ICC system by pushing the CRUISE ON/OFF switch again.)

For additional information about the VDC system, refer to “Vehicle Dynamic Control (VDC) system” in this section.

Vehicle detected ahead

When a vehicle is detected in the lane ahead, the ICC system decelerates the vehicle by controlling the throttle and applying the brakes to match the speed of a slower vehicle ahead. The system then controls the vehicle speed based on the speed of the vehicle ahead to maintain the driver selected distance.
NOTE:

- The stoplights of the vehicle come on when braking is performed by the ICC system.
- When the brake operates, a noise may be heard. This is not a malfunction.

When a vehicle ahead is detected, the vehicle ahead detection indicator comes on. The ICC system will also display the set speed and selected distance.

Vehicle ahead not detected

When a vehicle is no longer detected ahead, the ICC system gradually accelerates your vehicle to resume the previously set vehicle speed. The ICC system then maintains the set speed.

When a vehicle is no longer detected, the vehicle ahead detection indicator turns off. If a vehicle ahead appears during acceleration to the set vehicle speed or any time the ICC system is in operation, the system controls the distance to that vehicle.

When a vehicle is no longer detected under approximately 15 mph (24 km/h), the system will be canceled.

When passing another vehicle, the set speed indicator will flash when the vehicle speed exceeds the set speed. The vehicle detect indicator will turn off when the area ahead of the vehicle is open. When the pedal is released, the vehicle will return to the previously set speed.

Even though your vehicle speed is set in the ICC system, you can depress the accelerator pedal when it is necessary to accelerate your vehicle rapidly.

How to change the set vehicle speed

To cancel the preset speed, use one of the following methods:

- Push the CANCEL switch. The set vehicle speed indicator will go out.
- Tap the brake pedal. The set vehicle speed indicator will go out.
- Turn the CRUISE ON/OFF switch off. The ICC indicators will go out.

Starting and driving 5-53
To reset at a faster cruising speed, use one of the following methods:

- Depress the accelerator pedal. When the vehicle attains the desired speed, push and release the COAST/SET switch.
- Push and hold the ACCEL/RES switch. The set vehicle speed will increase by approximately 5 mph (5 km/h for Canada).
- Push, then quickly release the ACCEL/RES switch. Each time you do this, the set speed will increase by approximately 1 mph (1 km/h for Canada).

To reset at a slower cruising speed, use one of the following methods:

- Lightly tap the brake pedal. When the vehicle attains the desired speed, push the COAST/SET switch and release it.
- Push and hold the COAST/SET switch. The set vehicle speed will decrease by approximately 5 mph (5 km/h for Canada).
- Push, then quickly release the COAST/SET switch. Each time you do this, the set speed will decrease by approximately 1 mph (1 km/h for Canada).

To resume the preset speed, push and release the ACCEL/RES switch. The vehicle will resume the last set cruising speed when the vehicle speed is over 20 mph (32 km/h).

How to change the set distance to the vehicle ahead

The distance to the vehicle ahead can be selected at any time depending on the traffic conditions.

Each time the distance switch A is pushed, the set distance will change to long, middle, short and back to long again, in that sequence.

5-54 Starting and driving
Distance Approximatedistance at 60 mph (100 km/h) [ft (m)]

1. Long 200 (60)
2. Middle 150 (45)
3. Short 90 (30)

- The distance to the vehicle ahead will change according to the vehicle speed. The higher the vehicle speed, the longer the distance.
- If the engine is stopped, the set distance becomes “long.” (Each time the engine is started, the initial setting becomes “long.”)

Approach warning

If your vehicle comes closer to the vehicle ahead due to rapid deceleration of that vehicle or if another vehicle cuts in, the system warns the driver with the chime and ICC system display. Decelerate by depressing the brake pedal to maintain a safe vehicle distance if:

- The chime sounds.
- The vehicle ahead detection indicator blinks.

The warning chime may not sound in some cases when there is a short distance between vehicles. Some examples are:

- When the vehicles are traveling at the same speed and the distance between vehicles is not changing.
- When the vehicle ahead is traveling faster and the distance between vehicles is increasing.
- When a vehicle cuts in near your vehicle.

The warning chime will not sound when:

- The vehicle approaches other vehicles that are parked or moving slowly.
- The accelerator pedal is depressed, overriding the system.

NOTE:
The approach warning chime may sound and the system display may blink when the ICC sensor detects objects on the side of the vehicle or on the side of the road. This may cause the ICC system to decelerate or accelerate the vehicle. The ICC sensor may detect these objects when the vehicle is driven on winding roads, narrow roads, hilly roads, or when entering or exiting a curve. In these cases you will have to manually control the proper distance ahead of your vehicle.

Also, the sensor sensitivity can be affected by vehicle operation (steering maneuver or driving position in the lane) or traffic or vehicle condition (for example, if a vehicle is being driven with some damage).
Listed below are the system limitations for the ICC system. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.

- The ICC system is primarily intended for use on straight, dry, open roads with light traffic. It is not advisable to use the ICC system in city traffic or congested areas.
- The ICC system will not adapt automatically to road conditions. This system should be used in evenly flowing traffic. Do not use the system on roads with sharp curves, or on icy roads, in heavy rain or in fog.
- As there is a performance limit to the distance control function, never rely solely on the ICC system. This system does not correct careless, inattentive or absentminded driving, or overcome poor visibility in rain, fog, or other bad weather. Decelerate the vehicle speed by depressing the brake pedal, depending on the distance to the vehicle ahead and the surrounding circumstances in order to maintain a safe distance between vehicles.
- If the vehicle ahead comes to a stop, the vehicle decelerates to a standstill within the limitations of the system. The system will cancel once it judges that the vehicle has come to a standstill and sound a warning chime. To prevent the vehicle from moving, the driver must depress the brake pedal.
- Always pay attention to the operation of the vehicle and be ready to manually control the proper following distance. The ICC system may not be able to maintain the selected distance between vehicles (following distance) or selected vehicle speed under some circumstances.
- The system may not detect the vehicle in front of you in certain road or weather conditions. To avoid accidents, never use the ICC system under the following conditions:
  - On roads where the traffic is heavy or there are sharp curves
  - On slippery road surfaces such as on ice or snow, etc.
  - During bad weather (rain, fog, snow, etc.)
  - When rain, snow or dirt adhere to the bumper around the distance sensor
  - On steep downhill roads (the vehicle may go beyond the set vehicle speed and frequent braking may result in overheating the brakes)
  - On repeated uphill and downhill roads
  - When traffic conditions make it difficult to keep a proper distance between vehicles because of frequent acceleration or deceleration

- Interference by other radar sources
- Do not use the ICC system if you are towing a trailer. The system may not detect a vehicle ahead.
- In some road or traffic conditions, a vehicle or object can unexpectedly come into the sensor detection zone and cause automatic braking. Always stay alert and avoid using the ICC system where not recommended in this warning section.

The radar sensor will not detect the following objects:
- Stationary and slow moving vehicles
- Pedestrians or objects in the roadway
- Oncoming vehicles in the same lane
- Motorcycles traveling offset in the travel lane

The following are some conditions in which the sensor cannot properly detect a vehicle ahead and the system may not operate properly:
- When snow or road spray from traveling vehicles reduces the sensor’s detection.
- When excessively heavy baggage is loaded in the rear seat or the trunk of your vehicle.

The ICC system is designed to automatically check the sensor’s operation within the limitations of the system.

The detection zone of the ICC sensor is limited. A vehicle ahead must be in the detection zone for the vehicle-to-vehicle distance detection mode to maintain the selected distance from the vehicle ahead.

A vehicle ahead may move outside of the detection zone due to its position within the same lane of travel. Motorcycles may not be detected in the same lane ahead if they are traveling offset from the centerline of the lane. A vehicle that is entering the lane ahead may not be detected until the vehicle has completely moved into the lane.

If this occurs, the ICC system may warn you by blinking the system indicator and sounding the chime. The driver may have to manually control the proper distance away from the vehicle traveling ahead.
When driving on some roads, such as winding, hilly, curved, narrow roads, or roads which are under construction, the ICC sensor may detect vehicles in a different lane, or may temporarily not detect a vehicle traveling ahead. This may cause the ICC system to decelerate or accelerate the vehicle.

The detection of vehicles may also be affected by vehicle operation (steering maneuver or traveling position in the lane, etc.) or vehicle condition.

If this occurs, the ICC system may warn you by blinking the system indicator and sounding the chime unexpectedly. You will have to manually control the proper distance away from the vehicle traveling ahead.
SYSTEM TEMPORARILY UNAVAILABLE

The following are conditions in which the ICC system may be temporarily unavailable. In these instances, the ICC system may not cancel and may not be able to maintain the selected following distance from the vehicle ahead.

**Condition A**

Under the following conditions, the ICC system is automatically canceled. A chime will sound and the system will not be able to be set:

- When the VDC system is turned off
- When the VDC or ABS operates
- When a vehicle ahead is not detected and your vehicle is traveling below the speed of 15 mph (24 km/h)
- When the system judges the vehicle is at a standstill
- When the shift lever is not in the D (Drive) or L (Low) (if so equipped) position
- When the parking brake is applied
- When a wheel slips
**Action to take**

When the conditions listed above are no longer present, turn the system off using the CRUISE ON/OFF switch. Turn the ICC system back on to use the system.

**Condition B**

When the radar sensor area of the front bumper is covered with dirt or is obstructed, the ICC system will automatically be canceled. If the sensor area is covered with ice, a transparent or translucent vinyl bag, etc., the ICC system may not detect vehicles ahead. In these instances, the ICC system may not cancel and may not be able to maintain the selected following distance from the vehicle ahead. Be sure to check and clean the sensor area.

The system warning light (orange) will illuminate and the "Unavailable: Front Radar Obstruction" warning message will appear in the vehicle information display.

When driving on roads with limited road structures or buildings (for example, long bridges, deserts, snow fields, driving next to long walls), the system may illuminate the system warning light (orange) and display the "Unavailable: Front Radar Obstruction" message.

**Action to take**

If the warning light (orange) comes on, park the vehicle in a safe location and turn the engine off. Check to see if the radar sensor window is blocked. If the radar sensor window is blocked, remove the blocking material. Restart the engine. If the warning light continues to illuminate, have the ICC system checked. It is recommended that you visit a NISSAN dealer for this service.

**Condition C**

When the ICC system is not operating properly, a chime sounds and the system warning light (orange) will come on.

**Action to take**

If the warning light comes on, park the vehicle in a safe place. Turn the engine off, restart the engine, resume driving and set the ICC system again.

If it is not possible to set the system or the indicator stays on, it may indicate that the system is malfunctioning. Although the vehicle is still drivable under normal conditions, have the vehicle checked. It is recommended that you visit a NISSAN dealer for this service.
SYSTEM MAINTENANCE

The sensor for the ICC system is located on the front of the vehicle.

To keep the ICC system operating properly, be sure to observe the following:

- Always keep the sensor area clean.
- Do not strike or damage the areas around the sensor. Do not touch or remove the screw located on the sensor. Doing so could cause failure or malfunction. If the sensor is damaged due to an accident, it is recommended that you contact a NISSAN dealer.

- Do not attach a sticker (including transparent material) or install an accessory near the sensor. This could cause failure or malfunction.
- Do not attach metallic objects near the sensor area (brush guard, etc.). This could cause failure or malfunction.
- Do not alter, remove, or paint the front bumper. Before customizing or restoring the front bumper, it is recommended that you contact a NISSAN dealer.

Radio frequency statement

FCC Notice

For USA

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

FCC Warning

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Radio frequency radiation exposure information:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.
This equipment should be installed and operated with minimum distance of 20 cm between the radiator and your body. The transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

For Canada
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:
1. This device may not cause interference,
2. This device must accept any interference, including interference that may cause undesired operation of the device.

**WARNING**

Failure to follow the warnings and instructions for proper use of the AEB system could result in serious injury or death.

- The AEB system is a supplemental aid to the driver. It is not a replacement for the driver’s attention to traffic conditions or responsibility to drive safely. It cannot prevent accidents due to carelessness or dangerous driving techniques.
- The AEB system does not function in all driving, traffic, weather and road conditions.

The AEB system can assist the driver when there is a risk of a forward collision with the vehicle ahead in the traveling lane.

The AEB system uses a radar sensor located behind the lower grille of the front bumper to measure the distance to the vehicle ahead in the same lane.

5-62 Starting and driving
1. Vehicle ahead detection indicator
2. AEB system warning light

**AEB SYSTEM OPERATION**

The AEB system will function when your vehicle is driven at speeds above approximately 3 mph (5 km/h).

If a risk of a forward collision is detected, the AEB system will provide an initial warning to the driver by both a visual and audible alert.

If the driver applies the brakes quickly and forcefully after the warning, and the AEB system detects that there is still the possibility of a forward collision, the system will automatically increase the braking force. If the driver does not take action, the AEB system issues the second visual warning (red) and audible warning and also applies partial braking.

If the risk of a collision becomes imminent, the AEB system applies harder braking automatically.
The vehicle's brake lights come on when braking is performed by the AEB system.

Depending on vehicle speed and distance to the vehicle ahead, as well as driving and roadway conditions, the system may help the driver avoid a forward collision or may help mitigate the consequences of a collision, should one be unavoidable. If the driver is handling the steering wheel, accelerating or braking, the AEB system will function later or will not function.

The automatic braking will cease under the following conditions:

- When the steering wheel is turned as far as necessary to avoid a collision.
- When the accelerator pedal is depressed.
- When there is no longer a vehicle detected ahead.

If the AEB system has stopped the vehicle, the vehicle will remain at a standstill for approximately 2 seconds before the brakes are released.
TURNING THE AEB SYSTEM ON/OFF
Perform the following steps to turn the AEB system ON or OFF.

1. Press the button until “Settings” displays in the vehicle information display. Use the button to select “Driver Assistance.” Then press the ENTER button.
2. Select “Driving Aids” and press the ENTER button.
3. Select “Emergency Brake” and press the ENTER button.
   When the AEB system is turned off, the AEB system warning light illuminates.

NOTE:
The AEB system will be automatically turned on when the engine is restarted.

AEB SYSTEM LIMITATIONS

⚠️ WARNING
Listed below are the system limitations for the AEB system. Failure to operate the vehicle in accordance with these system limitations could result in serious injury or death.

- The AEB system cannot detect all vehicles under all conditions.
- The radar sensor does not detect the following objects:
  - Pedestrians, animals or obstacles in the roadway.
  - Oncoming vehicles.
  - Crossing vehicles.
- The radar sensor has some performance limitations. If a stationary vehicle is in the vehicle’s path, the AEB system will not function when the vehicle is driven at speeds over approximately 50 mph (80 km/h).
- The radar sensor may not detect a vehicle ahead in the following conditions:
  - Dirt, ice, snow or other material covering the radar sensor.
  - Interference by other radar sources.
  - Snow or road spray from traveling vehicles.
  - If the vehicle ahead is narrow (e.g., motorcycle).
  - When driving on a steep downhill slope or roads with sharp curves.
- In some road or traffic conditions, the AEB system may unexpectedly apply partial braking. When acceleration is necessary, continue to depress the accelerator pedal to override the system.
- Braking distances increase on slippery surfaces.
- The system is designed to automatically check the sensor’s functionality, within certain limitations. The system may not detect some forms of obstructions of the sensor area such as ice, snow, stickers, etc. In these cases, the system may not be able to warn the driver properly. Be sure that you check, clean and clear the sensor area regularly.
- Excessive noise will interfere with the warning chime sound, and the chime may not be heard.
When the radar sensor picks up interference from another radar source, making it impossible to detect a vehicle ahead, the AEB system is automatically turned off. The AEB system warning light (orange) will illuminate.

**Action to take**

When the above conditions no longer exist, the AEB system will resume automatically.

**Condition B**

When the sensor area of the front bumper is covered with dirt or is obstructed, making it impossible to detect a vehicle ahead, the AEB system is automatically turned off. The AEB system warning light (orange) will illuminate and the “Unavailable: Front Radar Obstruction” warning message will appear in the vehicle information display.

When driving on roads with limited road structures or buildings (for example, long bridges, deserts, snow fields, driving next to long walls), the system may illuminate the
AEB system warning light (orange) and display the 'Unavailable: Front Radar Obstruction' message.

**Action to take**

If the AEB system warning light (orange) comes on, stop the vehicle in a safe place, place the shift lever in the P (Park) position and turn the engine off. Clean the radar cover on the lower grille with a soft cloth, and restart the engine. If the warning light continues to illuminate, have the AEB system checked. It is recommended that you visit a NISSAN dealer for this service.

**SYSTEM MALFUNCTION**

If the AEB system malfunctions, it will be turned off automatically, a chime will sound, the AEB system warning light (orange) will illuminate and the warning message [Malfunction] will appear in the vehicle information display.

**Action to take**

If the AEB system warning light (orange) comes on, stop the vehicle in a safe location, turn the engine off and restart the engine. If the warning light continues to illuminate, have the AEB system checked. It is recommended that you visit a NISSAN dealer for this service.

**SYSTEM MAINTENANCE**

The sensor A is located on the front of the vehicle.

To keep the system operating properly, be sure to observe the following:

- Always keep the sensor area of the front bumper clean.
- Do not strike or damage the areas around the sensor.
- Do not cover or attach stickers or similar objects on the front bumper near the sensor area. This could cause failure or malfunction.
- Do not attach metallic objects near the sensor area (brush guard, etc.). This could cause failure or malfunction.
- Do not alter, remove or paint the front bumper. Before customizing or restoring the front bumper, it is recommended that you visit a NISSAN dealer.

**FCC Notice**

For USA

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

**FCC Warning**

Changes or modifications made to this equipment not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

---

Starting and driving 5-67
For Canada
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:
1. This device may not cause interference,
2. This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d’Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes: (1) l’appareil ne doit pas produire de brouillage, et (2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.

CAUTION
During the first 1,200 miles (2,000 km), follow these recommendations to obtain maximum engine performance and ensure the future reliability and economy of your new vehicle. Failure to follow these recommendations may result in shortened engine life and reduced engine performance.

- Avoid driving for long periods at constant speed, either fast or slow, and do not run the engine over 4,000 RPM.
- Do not accelerate at full throttle in any gear.
- Avoid quick starts.
- Avoid hard braking as much as possible.
- Do not tow a trailer for the first 500 miles (805 kilometers). Your engine, axle or other parts could be damaged.

BREAK-IN SCHEDULE

FUEL EFFICIENT DRIVING TIPS

Follow these easy-to-use Fuel Efficient Driving Tips to help you achieve the most fuel economy from your vehicle.

1. Use Smooth Accelerator and Brake Pedal Application
   - Avoid rapid starts and stops
   - Use smooth, gentle accelerator and brake application whenever possible
   - Maintain constant speed while commuting and coast whenever possible

2. Maintain Constant Speed
   - Look ahead to try and anticipate and minimize stops
   - Synchronizing your speed with traffic lights allows you to reduce your number of stops
   - Maintaining a steady speed can minimize red light stops and improve fuel efficiency

3. Use Air Conditioning (A/C) at Higher Vehicle Speeds
   - Below 40 mph (64 km/h), it is more efficient to open windows to cool the vehicle due to reduced engine load
• Above 40 mph (64 km/h), it is more efficient to use A/C to cool the vehicle due to increased aerodynamic drag

• Recirculating the cool air in the cabin when the A/C is on reduces cooling load

4. **Drive at Economical Speeds and Distances**

• Observing the speed limit and not exceeding 60 mph (97 km/h) (where legally allowed) can improve fuel efficiency due to reduced aerodynamic drag

• Maintaining a safe following distance behind other vehicles reduces unnecessary braking

• Safely monitoring traffic to anticipate changes in speed permits reduced braking and smooth acceleration changes

• Select a gear range suitable to road conditions

5. **Use Cruise Control**

• Using cruise control during highway driving helps maintain a steady speed

• Cruise control is particularly effective in providing fuel savings when driving on flat terrains

6. **Plan for the Shortest Route**

• Utilize a map or navigation system to determine the best route to save time

7. **Avoid Idling**

• Shutting off your engine when safe for stops exceeding 30–60 seconds saves fuel and reduces emissions

8. **Buy an Automated Pass for Toll Roads**

• Automated passes permit drivers to use special lanes to maintain cruising speed through the toll and avoid stopping and starting

9. **Winter Warm Up**

• Limit idling time to minimize impact to fuel economy

• Vehicles typically need no more than 30 seconds of idling at start-up to effectively circulate the engine oil before driving

• Your vehicle will reach its ideal operating temperature more quickly while driving versus idling

10. **Keeping your Vehicle Cool**

• Park your vehicle in a covered parking area or in the shade whenever possible

• When entering a hot vehicle, opening the windows will help to reduce the inside temperature faster, resulting in reduced demand on your A/C system

11. **ECO Mode**

• The ECO mode helps to enhance the fuel economy by controlling the engine and Continuously Variable Transmission (if so equipped) operation automatically to avoid rapid acceleration.
INCREASING FUEL ECONOMY

- Keep your engine tuned up.
- Follow the recommended scheduled maintenance.
- Keep the tires inflated to the correct pressure. Low tire pressure increases tire wear and lowers fuel economy.
- Keep the wheels in correct alignment. Improper alignment increases tire wear and lowers fuel economy.
- Use the recommended viscosity engine oil. For additional information, refer to ‘Engine oil and oil filter recommendations’ in the ‘Technical and consumer information’ section of this manual.

PARKING/PARKING ON HILLS

**WARNING**

- Do not stop or park the vehicle over flammable materials such as dry grass, waste paper or rags. They may ignite and cause a fire.

- Safe parking procedures require that both the parking brake be set and the transmission placed in P (Park) for Continuously Variable Transmission (CVT) models or in an appropriate gear for manual transmission (M/T) models. Failure to do so could cause the vehicle to move unexpectedly or roll away and result in an accident. Make sure the shift lever has been pushed as far forward as it can go and cannot be moved without depressing the foot brake pedal.

5-70  Starting and driving
Never leave the engine running while the vehicle is unattended.

To help avoid risk of injury or death through unintended operation of the vehicle and/or its systems, do not leave children, people who require the assistance of others or pets unattended in your vehicle. Additionally, the temperature inside a closed vehicle on a warm day can quickly become high enough to cause a significant risk of injury or death to people and pets.

1. Firmly apply the parking brake.

2. M/T models
   Place the shift lever in the R (Reverse) position. When parking on an uphill grade, place the shift lever in 1st gear.
   CVT models
   Move the shift lever into the P (Park) position.

3. To help prevent the vehicle from rolling into traffic when parked on an incline, it is a good practice to turn the wheels as illustrated.
   • HEADED DOWNHILL WITH CURB ①:
     Turn the wheels into the curb and move the vehicle forward until the curb side wheel gently touches the curb.
   • HEADED UPHILL WITH CURB ②:
     Turn the wheels away from the curb and move the vehicle back until the curb side wheel gently touches the curb.
   • HEADED UPHILL OR DOWNHILL, NO CURB ③:
     Turn the wheels toward the side of the road so the vehicle will move away from the center of the road if it moves.

4. Place the ignition switch in the LOCK position and remove the key.

WARNING
- If the engine is not running or is turned off while driving, the power assist for the steering will not work. Steering will be harder to operate.
- When the power steering warning light illuminates with the engine running, there will be no power assist for the steering. You will still have control of the vehicle, but the steering will be harder to operate. Have the power steering system checked. It is recommended that you visit a NISSAN dealer for this service.

The power steering system is designed to provide power assist while driving to operate the steering wheel with light force.

When the steering wheel is operated repeatedly or continuously while parking or driving at a very low speed, the power assist for the steering wheel will be reduced. This is to prevent overheating of the power steering system and protect it from getting damaged. While the power assist is reduced, steering wheel operation will become heavy. When the temperature of the power steering system goes down, the power assist level will return to normal. Avoid repeating such steering wheel op-
erations that could cause the power steering system to overheat.

You may hear a noise when the steering wheel is operated quickly. However, this is not a malfunction.

If the power steering warning light illuminates while the engine is running, it may indicate the power steering system is not functioning properly and may need servicing. Have the power steering system checked. It is recommended that you visit a NISSAN dealer for this service.

When the power steering warning light illuminates with the engine running, there will be no power assist for the steering, but you will still have control of the vehicle. At this time, greater steering effort is required to operate the steering wheel, especially in sharp turns and at low speeds.

For additional information, refer to ‘Power steering warning light’ in the ‘Instruments and controls’ section of this manual.

The brake system has two separate hydraulic circuits. If one circuit malfunctions, you will still have braking at two wheels.

**BRAKE PRECAUTIONS**

**Vacuum assisted brakes**

The brake booster aids braking by using engine vacuum. If the engine stops, you can stop the vehicle by depressing the brake pedal. However, greater foot pressure on the brake pedal will be required to stop the vehicle and stopping distance will be longer.

**Using the brakes**

Avoid resting your foot on the brake pedal while driving. This will overheat the brakes, wear out the brake pads faster, and reduce gas mileage.

To help reduce brake wear and to prevent the brakes from overheating, reduce speed and downshift to a lower gear before going down a slope or long grade. Overheated brakes may reduce braking performance and could result in loss of vehicle control.

---

**WARNING**

- While driving on a slippery surface, be careful when braking, accelerating or downshifting. Abrupt braking or accelerating could cause the wheels to skid and result in an accident.
- If the engine is not running or is turned off while driving, the power assist for the brakes will not work. Braking will be harder.

**Wet brakes**

When the vehicle is washed or driven through water, the brakes may get wet. As a result, your braking distance will be longer and the vehicle may pull to one side during braking.

To dry the brakes, drive the vehicle at a safe speed while lightly pressing the brake pedal to heat up the brakes. Do this until the brakes return to normal. Avoid driving the vehicle at high speeds until the brakes function correctly.
Parking brake break-in

Break in the parking brake shoes whenever the stopping effect of the parking brake is weakened or whenever the parking brake shoes and/or drums/rotors are replaced, in order to assure the best braking performance.

This procedure is described in the vehicle service manual. It is recommended that you visit a NISSAN dealer for this service.

ANTI-LOCK BRAKING SYSTEM (ABS)

**WARNING**

- The ABS is a sophisticated device, but it cannot prevent accidents resulting from careless or dangerous driving techniques. It can help maintain vehicle control during braking on slippery surfaces. Remember that stopping distances on slippery surfaces will be longer than on normal surfaces even with ABS. Stopping distances may also be longer on rough, gravel or snow covered roads, or if you are using tire chains. Always maintain a safe distance from the vehicle in front of you. Ultimately, the driver is responsible for safety.

- Tire type and condition may also affect braking effectiveness.
  - When replacing tires, install the specified size of tires on all four wheels.
  - When installing a spare tire, make sure that it is the proper size and type as specified on the Tire and Loading Information label. For additional information, refer to “Tire and Loading Information label” in the “Technical and consumer information” section of this manual.
  - For additional information, refer to “Wheels and tires” in the “Do-it-yourself” section of this manual.

The ABS controls the brakes so the wheels do not lock during hard braking or when braking on slippery surfaces. The system detects the rotation speed at each wheel and varies the brake fluid pressure to prevent each wheel from locking and sliding. By preventing each wheel from locking, the system helps the driver maintain steering control and helps to minimize swerving and spinning on slippery surfaces.

Using the system

Depress the brake pedal and hold it down. Depress the brake pedal with firm steady pressure, but do not pump the brakes. The Anti-lock Braking System will operate to prevent the wheels from locking up. Steer the vehicle to avoid obstacles.

**WARNING**

Do not pump the brake pedal. Doing so may result in increased stopping distances.

Self-test feature

The Anti-lock Braking System (ABS) includes electronic sensors, electric pumps, hydraulic solenoids and a computer. The computer has a built-in diagnostic feature that tests the system each time you start the engine and move the vehicle at a low speed in forward or reverse. When the self-test occurs, you may hear a “clunk” noise and/or feel a pulsation in the brake pedal. This is normal and does not indicate a malfunction. If the computer senses a malfunction, it switches the ABS off and illuminates the ABS warning light on the instrument panel. The brake system then operates normally, but without anti-lock assistance.

Starting and driving  5-73
If the ABS warning light illuminates during the self-test or while driving, have the vehicle checked. It is recommended that you visit a NISSAN dealer for this service.

**Normal operation**

The Anti-lock Braking System (ABS) operates at speeds above 3 - 6 mph (5 - 10 km/h). The speed varies according to road conditions.

When the ABS senses that one or more wheels are close to locking up, the actuator rapidly applies and releases hydraulic pressure. This action is similar to pumping the brakes very quickly. You may feel a pulsation in the brake pedal and hear a noise from under the hood or feel a vibration from the actuator when it is operating. This is normal and indicates that the ABS is operating properly. However, the pulsation may indicate that road conditions are hazardous and extra care is required while driving.

**BRAKE ASSIST**

When the force applied to the brake pedal exceeds a certain level, the brake assist is activated generating greater braking force than a conventional brake booster even with light pedal force.

---

**VEHICLE DYNAMIC CONTROL (VDC) SYSTEM**

The VDC system uses various sensors to monitor driver inputs and vehicle motion. Under certain driving conditions, the VDC system helps to perform the following functions:

- Controls brake pressure to reduce wheel slip on one slipping drive wheel so power is transferred to a non-slipping drive wheel on the same axle.
- Controls brake pressure and engine output to reduce drive wheel slip based on vehicle speed (traction control function).
- Controls brake pressure at individual wheels and engine output to help the driver maintain control of the vehicle in the following conditions:
  - Understeer (vehicle tends to not follow the steered path despite increased steering input)
  - Oversteer (vehicle tends to spin due to certain road or driving conditions)

The VDC system can help the driver to maintain control of the vehicle, but it cannot prevent loss of vehicle control in all driving situations.
When the VDC system operates, the indicator in the instrument panel flashes to note the following:

- The road may be slippery or the system may determine some action is required to help keep the vehicle on the steered path.
- You may feel a pulsation in the brake pedal and hear a noise or vibration from under the hood. This is normal and indicates that the VDC system is working properly.
- Adjust your speed and driving to the road conditions.

For additional information, refer to “Slip indicator light” and “Vehicle Dynamic Control (VDC) OFF indicator light” in the “Instrument and controls” section of this manual.

If a malfunction occurs in the system, the indicator light comes on in the instrument panel. The VDC system automatically turns off when the indicator light is off.

The VDC OFF switch is used to turn off the VDC system. The indicator and the AEB system warning light illuminates to indicate the VDC system is off.

When the VDC switch is used to turn off the system, the VDC system still operates to prevent one drive wheel from slipping by transferring power to a non-slipping drive wheel. The indicator flashes if this occurs. All other VDC functions are off and the indicator will not flash.

The VDC system is automatically reset to on when the ignition switch is placed in the OFF position then back to the ON position.

The computer has a built-in diagnostic feature that tests the system each time you start the engine and move the vehicle forward or in reverse at a slow speed. When the self-test occurs, you may hear a clunk noise and/or feel a pulsation in the brake pedal. This is normal and is not an indication of a malfunction.

**WARNING**

- The VDC system is designed to help the driver maintain stability but does not prevent accidents due to abrupt steering operation at high speeds or by careless or dangerous driving techniques. Reduce vehicle speed and be especially careful when driving and cornering on slippery surfaces and always drive carefully.

- Do not modify the vehicle’s suspension. If suspension parts such as shock absorbers, struts, springs, stabilizer bars, bushings and wheels are not NISSAN recommended for your vehicle or are extremely deteriorated, the VDC system may not operate properly. This could adversely affect vehicle handling performance, and the indicator may flash or the indicator light may illuminate.

- If brake related parts such as brake pads, rotors and calipers are not NISSAN recommended or are extremely deteriorated, the VDC system may not operate properly and the indicator light may illuminate.

- If engine control related parts are not NISSAN recommended or are extremely deteriorated, the indicator light may illuminate.

Starting and driving 5-75
• When driving on extremely inclined surfaces such as higher banked corners, the VDC system may not operate properly and the indicator may flash or the indicator light may illuminate. Do not drive on these types of roads.

• When driving on an unstable surface such as a turntable, ferry, elevator or ramp, the indicator may flash or the indicator light may illuminate. This is not a malfunction. Restart the engine after driving onto a stable surface.

• If wheels or tires other than the NISSAN recommended ones are used, the VDC system may not operate properly and the indicator may flash or the indicator light may illuminate.

• The VDC system is not a substitute for winter tires or tire chains on a snow covered road.

RISE-UP AND BUILD-UP
The system gradually adjusts braking power during normal braking to help provide an enhanced brake feel.

BRAKE FORCE DISTRIBUTION
During braking while driving through turns, the system optimizes the distribution of force to each of the front and rear wheels depending on the radius of the turn.

WARNING
• The VDC system is designed to help the driver maintain stability but does not prevent accidents due to abrupt steering operation at high speeds or by careless or dangerous driving techniques. Reduce vehicle speed and be especially careful when driving and cornering on slippery surfaces and always drive carefully.

• Do not modify the vehicle’s suspension. If suspension parts such as shock absorbers, struts, springs, stabilizer bars, bushings and wheels are not NISSAN recommended for your vehicle or are extremely deteriorated, the VDC system may not operate properly. This could adversely affect vehicle handling performance, and the indicator may flash or the indicator light may illuminate.

• If brake related parts such as brake pads, rotors and calipers are not NISSAN recommended or are extremely deteriorated, the VDC system may not operate properly and the indicator light may illuminate.

• If engine control related parts are not NISSAN recommended or are extremely deteriorated, the indicator light may illuminate.
COLD WEATHER DRIVING

FREEING A FROZEN DOOR LOCK
To prevent a door lock from freezing, apply de-icer through the key hole. If the lock becomes frozen, heat the key before inserting it into the key hole, or use the remote keyless entry key fob or the NISSAN Intelligent Key®.

ANTIFREEZE
In the winter when it is anticipated that the temperature will drop below 32°F (0°C), check the antifreeze to assure proper winter protection. For additional information, refer to “Engine cooling system” in the “Do-it-yourself” section of this manual.

BATTERY
If the battery is not fully charged during extremely cold weather conditions, the battery fluid may freeze and damage the battery. To maintain maximum efficiency, the battery should be checked regularly. For additional information, refer to “Battery” in the “Do-it-yourself” section of this manual.

DRAINING OF COOLANT WATER
If the vehicle is to be left outside without anti-freeze, drain the cooling system, including the engine block. Refill before operating the vehicle. For additional information, refer to “Changing engine coolant” in the “Do-it-yourself” section of this manual.

TIRE EQUIPMENT
1. SUMMER tires have a tread designed to provide superior performance on dry pavement. However, the performance of these tires will be substantially reduced in snowy and icy conditions. If you operate your vehicle on snowy or icy roads, NISSAN recommends the use of MUD & SNOW or ALL SEASON TIRES on all four wheels. It is recommended that you visit a NISSAN dealer for the tire type, size, speed rating and availability information.
2. For additional traction on icy roads, studded tires may be used. However, some U.S. states and Canadian provinces prohibit their use. Check local, state and provincial laws before installing studded tires.

FREEING A FROZEN DOOR LOCK
To prevent a door lock from freezing, apply de-icer through the key hole. If the lock becomes frozen, heat the key before inserting it into the key hole, or use the remote keyless entry key fob or the NISSAN Intelligent Key®.

ANTIFREEZE
In the winter when it is anticipated that the temperature will drop below 32°F (0°C), check the antifreeze to assure proper winter protection. For additional information, refer to “Engine cooling system” in the “Do-it-yourself” section of this manual.

BATTERY
If the battery is not fully charged during extremely cold weather conditions, the battery fluid may freeze and damage the battery. To maintain maximum efficiency, the battery should be checked regularly. For additional information, refer to “Battery” in the “Do-it-yourself” section of this manual.

DRAINING OF COOLANT WATER
If the vehicle is to be left outside without anti-freeze, drain the cooling system, including the engine block. Refill before operating the vehicle. For additional information, refer to “Changing engine coolant” in the “Do-it-yourself” section of this manual.

TIRE EQUIPMENT
1. SUMMER tires have a tread designed to provide superior performance on dry pavement. However, the performance of these tires will be substantially reduced in snowy and icy conditions. If you operate your vehicle on snowy or icy roads, NISSAN recommends the use of MUD & SNOW or ALL SEASON TIRES on all four wheels. It is recommended that you visit a NISSAN dealer for the tire type, size, speed rating and availability information.
2. For additional traction on icy roads, studded tires may be used. However, some U.S. states and Canadian provinces prohibit their use. Check local, state and provincial laws before installing studded tires.
Skid and traction capabilities of studded snow tires on wet or dry surfaces may be poorer than that of non-studded snow tires.

3. Tire chains may be used. For additional information, refer to “Tire chains” in the “Do-it-yourself” section of this manual.

SPECIAL WINTER EQUIPMENT

It is recommended that the following items be carried in the vehicle during winter:

- A scraper and stiff-bristled brush to remove ice and snow from the windows and wiper blades.
- A sturdy, flat board to be placed under the jack to give it firm support.
- A shovel to dig the vehicle out of snow-drifts.
- Extra washer fluid to refill the windshield-washer fluid reservoir.

DRIVING ON SNOW OR ICE

**WARNING**

- Wet ice (32°F, 0°C and freezing rain), very cold snow or ice can be slick and very hard to drive on. The vehicle will have much less traction or “grip” under these conditions. Try to avoid driving on wet ice until the road is salted or sanded.
- Whatever the condition, drive with caution. Accelerate and slow down with care. If accelerating or downshifting too fast, the drive wheels will lose even more traction.
- Allow more stopping distance under these conditions. Braking should be started sooner than on dry pavement.
- Allow greater following distances on slippery roads.

- Watch for slippery spots (glare ice). These may appear on an otherwise clear road in shaded areas. If a patch of ice is seen ahead, brake before reaching it. Try not to brake while on the ice, and avoid any sudden steering maneuvers.
- Do not use the cruise control (if so equipped) on slippery roads.
- Snow can trap dangerous exhaust gases under your vehicle. Keep snow clear of the exhaust pipe and from around your vehicle.

ENGINE BLOCK HEATER (if so equipped)

Engine block heaters are used to assist with cold temperature starting.

The engine block heater should be used when the outside temperature is 20°F (-7°C) or lower.
To use the engine block heater:

1. Turn the engine off.
2. Open the hood and unwrap the engine block heater cord.
3. Plug the engine block heater cord into a grounded 3-wire, 3-pronged extension cord.
4. Plug the extension cord into a Ground Fault Interrupt (GFI) protected, grounded 110-volt AC (VAC) outlet.
5. The engine block heater must be plugged in for at least 2 - 4 hours, depending on outside temperatures, to properly warm the engine coolant. Use an appropriate timer to turn the engine block heater on.
6. Before starting the engine, unplug and properly store the cord to keep it away from moving parts.

HAZARD WARNING FLASHER SWITCH

The flashers will operate with the ignition switch placed in any position.

Some jurisdictions may prohibit the use of the hazard warning flasher switch while driving.

![Hazard Warning Flasher Switch](image)

WARNING

- If stopping for an emergency, be sure to move the vehicle well off the road.
- Do not use the hazard warning flashers while moving on the highway unless unusual circumstances force you to drive so slowly that your vehicle might become a hazard to other traffic.
- Turn signals do not work when the hazard warning flasher lights are on.

EMERGENCY ENGINE SHUT OFF
(Push-button ignition models only)

To shut off the engine in an emergency situation while driving, perform the following procedure:

- Rapidly push the push-button ignition switch three consecutive times in less than 1.5 seconds, or
- Push and hold the push-button ignition switch for more than 2 seconds.

---

In case of emergency
TIRE PRESSURE MONITORING SYSTEM (TPMS)

This vehicle is equipped with TPMS. It monitors tire pressure of all tires except the spare. When the low tire pressure warning light is lit, and the “CHECK TIRE PRES” (vehicles without a vehicle information display) also appears in the trip computer or the “Tire Pressure Low - Add Air” (vehicles with a vehicle information display) appears in the vehicle information display, one or more of your tires is significantly under-inflated. If the vehicle is being driven with low tire pressure, the TPMS will activate and warn you of it by the low tire pressure warning light. This system will activate only when the vehicle is driven at speeds above 16 mph (25 km/h). For additional information, refer to “Warning lights, indicator lights and audible reminders” in the “Instruments and controls” section, and “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” sections of this manual.

WARNING

- Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.
- If the low tire pressure warning light illuminates while driving, avoid sudden steering maneuvers or abrupt braking, reduce vehicle speed, pull off the road to a safe location and stop the vehicle as soon as possible. Driving with under-inflated tires may permanently damage the tires and increase the likelihood of tire failure. Serious vehicle damage could occur and may lead to an accident and could result in serious personal injury. Check the tire pressure for all four tires. Adjust the tire pressure to the recommended COLD tire pressure shown on the Tire and Loading Information label to turn the low tire pressure warning light OFF. If you have a flat tire, replace it with a spare tire as soon as possible.
- When replacing a wheel without TPMS such as the spare tire, TPMS will not function and the low tire pressure warning light will flash for approximately one minute. The light will remain on after one minute. Have your tires replaced and/or TPMS system reset as soon as possible. It is recommended that you visit a NISSAN dealer for these services.
- Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.
- Do not inject any tire liquid or aerosol tire sealant into the tires, as this may cause a malfunction of the tire pressure sensors.

CHANGING A FLAT TIRE

If you have a flat tire, follow the instructions below:

Stopping the vehicle
1. Safely move the vehicle off the road and away from traffic.
2. Turn on the hazard warning flashers.

In case of emergency 6-3
3. Park on a level surface and apply the parking brake. Shift the manual transmission into R (Reverse), or the CVT into P (Park).

4. Turn off the engine.

5. Raise the hood to warn other traffic and to signal professional road assistance personnel that you need assistance.

6. Have all passengers get out of the vehicle and stand in a safe place, away from traffic and clear of the vehicle.

**WARNING**

- Make sure the parking brake is securely applied and the manual transmission is shifted into R (Reverse), or the CVT is shifted into P (Park).

- Never change tires when the vehicle is on a slope, ice or slippery areas. This is hazardous.

- Never change tires if oncoming traffic is close to your vehicle. Wait for professional road assistance.

---

A. Blocks
B. Flat tire

**Blocking wheels**

Place suitable blocks at both the front and back of the wheel diagonally opposite the flat tire to prevent the vehicle from moving when it is jacked up.

**WARNING**

Be sure to block the wheel as the vehicle may move and result in personal injury.

---

**Getting the spare tire and tools**

1. Open the trunk. Lift the trunk floor carpeting and spare tire cover. Remove the jack and the spare tire.

2. To remove the jack, take off the strap and lift out. If necessary, remove the spare tire first to easily access the jack strap.
3. Turn the clamp counterclockwise and remove to release the spare tire.

Removing wheel cover (if so equipped)

**CAUTION**

Do not use your hands to pry off wheel caps or wheel covers. Doing so could result in personal injury.

To remove the wheel cover, use the jack rod ① as illustrated.

Apply cloth ② between the wheel and jack rod to prevent damaging the wheel and wheel cover.

Use caution not to scratch the wheel cover or wheel surface.
Jacking up vehicle and removing the damaged tire

**WARNING**

- Never get under the vehicle while it is supported only by the jack. If it is necessary to work under the vehicle, support it with safety stands.
- Use only the jack provided with your vehicle to lift the vehicle. Do not use the jack provided with your vehicle on other vehicles. The jack is designed for lifting only your vehicle during a tire change.
- Use the correct jack-up points. Never use any other part of the vehicle for jack support.
- Never jack up the vehicle more than necessary.
- Never use blocks on or under the jack.
- Do not start or run the engine while vehicle is on the jack. It may cause the vehicle to move. This is especially true for vehicles with limited slip differentials.
- Do not allow passengers to stay in the vehicle while it is on the jack.
- Never run the engine with a wheel(s) off the ground. It may cause the vehicle to move.
Always refer to the illustrations for the correct placement and jack-up points for your specific vehicle model and jack type.

Carefully read the caution label attached to the jack body and the following instructions.

1. Loosen each wheel nut one or two turns by turning counterclockwise with the wheel nut wrench. Do not remove the wheel nuts until the tire is off the ground.

2. Place the jack directly under the jack-up point as illustrated so the top of the jack contacts the vehicle at the jack-up point. Align the jack head between the two notches in the front or the rear as shown. Also fit the groove of the jack head between the notches as shown.

3. To lift the vehicle, securely hold the jack lever and rod with both hands. Carefully raise the vehicle until the tire clears the ground. Remove the wheel nuts and then remove the tire.

Installing the spare tire

The spare tire is designed for emergency use. For additional information, refer to "Wheels and tires" in the "Do-it-yourself" section of this manual.

1. Clean any mud or dirt from the surface between the wheel and hub.

2. Carefully put the spare tire on and tighten the wheel nuts finger tight.

3. With the wheel nut wrench, tighten wheel nuts alternately and evenly in the sequence illustrated (A, B, C, D, E) until they are tight.

In case of emergency 6-7
4. Lower the vehicle slowly until the tire touches the ground. Then, with the wheel nut wrench, tighten the wheel nuts securely in the sequence illustrated (A, B, C, D, E). Lower the vehicle completely.

**WARNING**
- Incorrect wheel nuts or improperly tightened wheel nuts can cause the wheel to become loose or come off. This could cause an accident.
- Do not use oil or grease on the wheel studs or nuts. This could cause the nuts to become loose.
- Retighten the wheel nuts when the vehicle has been driven for 600 miles (1,000 km) (also in cases of a flat tire, etc.).

As soon as possible, tighten the wheel nuts to the specified torque with a torque wrench.

Wheel nut tightening torque: 83 ft-lb (113 N·m)

The wheel nuts must be kept tightened to specification at all times. It is recommended that wheel nuts be tightened to specification at each lubrication interval.

Adjust tire pressure to the COLD pressure.

COLD pressure: After vehicle has been parked for 3 hours or more or driven less than 1 mile (1.6 km).

COLD tire pressures are shown on the Tire and Loading Information Label.

After adjusting tire pressure to the COLD tire pressure, the display of the tire pressure information may show higher pressure than the COLD tire pressure after the vehicle has been driven more than 1 mile (1.6 km).

This is because the tire pressurizes as the tire temperature rises. This does not indicate a system malfunction.

5. Securely store the flat tire in the vehicle.

6. Install the jack in its storage area and tighten the jack strap.

7. Place the spare tire cover and the trunk floor carpeting over the damaged tire.

8. Close the trunk.
To start your engine with a booster battery, the instructions and precautions below must be followed.

**WARNING**

- Always make sure that the spare tire and jacking equipment are properly secured after use. Such items can become dangerous projectiles in an accident or sudden stop.
- The spare tire is designed for emergency use. Refer to specific instructions under the heading “Wheels and tires” in the “Do-it-yourself” section of this manual.

**WARNING**

- If done incorrectly, jump starting can lead to a battery explosion, resulting in severe injury or death. It could also damage your vehicle.
- Explosive hydrogen gas is always present in the vicinity of the battery. Keep all sparks and flames away from the battery.
- Do not allow battery fluid to come into contact with eyes, skin, clothing or painted surfaces. Battery fluid is a corrosive sulfuric acid solution which can cause severe burns. If the fluid should come into contact with anything, immediately flush the contacted area with water.
- Keep battery out of the reach of children.
- The booster battery must be rated at 12 volts. Use of an improperly rated battery can damage your vehicle.

- Whenever working on or near a battery, always wear suitable eye protectors (for example, goggles or industrial safety spectacles) and remove rings, metal bands, or any other jewelry. Do not lean over the battery when jump starting.
- Do not attempt to jump start a frozen battery. It could explode and cause serious injury.
- Your vehicle has an automatic engine cooling fan. It could come on at any time. Keep hands and other objects away from it.
Always follow the instructions below. Failure to do so could result in damage to the charging system and cause personal injury.

1. If the booster battery is in another vehicle, position the two vehicles to bring their batteries near each other.

Do not allow the two vehicles to touch.

2. Apply the parking brake. Move the shift lever to N (Neutral) (manual transmission) or to P (Park) (CVT). Switch off all unnecessary electrical systems (lights, heater, air conditioner (if so equipped), etc.).

3. Turn the ignition switch to the LOCK position.

4. Ensure the vent caps are level and tight.

5. Connect the jumper cables in the sequence illustrated (A, B, C, D).

CAUTION

- Always connect positive (+) to positive (+) and negative (−) to body ground (for example, strut mounting bolt, engine lift bracket, etc.) — not to the battery.

- Make sure the jumper cables do not touch moving parts in the engine compartment and that the cable clamps do not contact any other metal.

6. Start the engine of the booster vehicle and let it run for a few minutes.

7. Keep the engine speed of the booster vehicle at about 2,000 rpm and start the engine of the vehicle being jump started.

CAUTION

Do not keep the starter motor engaged for more than 10 seconds. If the engine does not start right away, place the ignition switch in the OFF position and wait 3 to 4 seconds before trying again.

8. After starting the engine, carefully disconnect the negative cable and then the positive cable.
**PUSH STARTING**

**CAUTION**
- Do not push start this vehicle. The three-way catalyst may be damaged.
- Continuously Variable Transmission (CVT) models and Manual Transmission (M/T) cannot be push-started or tow-started. Attempting to do so may cause transmission damage.
- For Manual Transmission (M/T) models, never try to start the vehicle by towing it. When the engine starts, the forward surge could cause the vehicle to collide with the tow vehicle.

**IF YOUR VEHICLE OVERHEATS**

If your vehicle is overheating (indicated by an extremely high temperature gauge reading), or if you feel a lack of engine power, detect abnormal noise, etc., take the following steps.

**WARNING**
- Do not continue to drive if your vehicle overheats. Doing so could cause engine damage or a vehicle fire.
- To avoid the danger of being scalded, never remove the radiator cap while the engine is still hot. When the radiator cap is removed, pressurized hot water will spurt out, possibly causing serious injury.
- Do not open the hood if steam is coming out.

1. Move the vehicle safely off the road, apply the parking brake and move the shift lever to N (Neutral) (manual transmission) or to P (Park) (CVT).
   **Do not stop the engine.**

2. Turn off the air conditioner (if so equipped). Open all the windows, move the heater or air conditioner temperature control to maximum hot and fan control to high speed.

3. Get out of the vehicle. Look and listen for steam or coolant escaping from the radiator before opening the hood. (If steam or coolant is escaping, turn off the engine.) Do not open the hood further until no steam or coolant can be seen.

4. Open the engine hood.

**WARNING**
- If steam or water is coming from the engine, stand clear to prevent getting burned.

5. Visually check drive belts for damage or looseness. Also check if the cooling fan is running. The radiator hoses and radiator should not leak water. If coolant is leaking, the water pump belt is missing or loose, or the cooling fan does not run, stop the engine.

**WARNING**
- Be careful not to allow your hands, hair, jewelry or clothing to come into contact with, or get caught in, engine belts or the engine cooling fan. The engine cooling fan can start at any time.

---

In case of emergency  6-11
6. After the engine cools down, check the coolant level in the engine coolant reservoir with the engine running. Add coolant to the engine coolant reservoir if necessary. Have your vehicle repaired. It is recommended that you visit a NISSAN dealer for this service.

When towing your vehicle, all State (Provincial in Canada) and local regulations for towing must be followed. Incorrect towing equipment could damage your vehicle. Towing instructions are available from a NISSAN dealer. Local service operators are generally familiar with the applicable laws and procedures for towing. To assure proper towing and to prevent accidental damage to your vehicle, NISSAN recommends having a service operator tow your vehicle. It is advisable to have the service operator carefully read the following precautions:

**WARNING**
- Never ride in a vehicle that is being towed.
- Never get under your vehicle after it has been lifted by a tow truck.

**CAUTION**
- When towing, make sure that the transmission, axles, steering system and powertrain are in working condition. If any of these conditions apply, dollies or a flatbed tow truck must be used.
- Always attach safety chains before towing.

For additional information, refer to 'Flat towing' in the 'Technical and consumer information' section of this manual.

NISSAN recommends towing your vehicle based upon the type of drivetrain. For additional information, refer to the diagrams in this section to ensure that your vehicle is properly towed.
2WD models with Continuously Variable Transmission (CVT)

NISSAN recommends that your vehicle be towed with the driving (front) wheels off the ground or place the vehicle on a flatbed truck as illustrated.

**CAUTION**
- Never tow CVT models with the front wheels on the ground or four wheels on the ground (forward or backward), as this may cause serious and expensive damage to the transmission. If it is necessary to tow the vehicle with the rear wheels raised always use towing dollies under the front wheels.
- When towing CVT models with the rear wheels on the ground or on towing dollies:

- Place the ignition switch in the OFF position, and secure the steering wheel in a straight-ahead position with a rope or similar device. Never secure the steering wheel by placing the ignition switch in the LOCK position. This may damage the steering lock mechanism (for models with a steering lock mechanism).
2WD models with manual transmission

NISSAN recommends that towing dollies be used when towing your vehicle or place the vehicle on the flatbed truck as illustrated.

If you must use a pull behind tow truck put the manual transmission in N (Neutral).

Your vehicle speed should never exceed 60 mph (97 km/h) when towing your vehicle. After towing 500 miles, start and idle the engine with the transmission in N (Neutral) for two minutes. Failure to idle the engine after every 500 miles of towing may cause damage to the transmission’s internal parts.

**CAUTION**

Failure to follow these guidelines can result in severe transmission damage.

- If you have to tow manual transmission models with the rear wheels on the ground (if you do not use towing dollies) or four wheels on the ground:
  - Always release the parking brake.

When towing long distances or speeds in excess of 60 mph (97 km/h), remove the propeller shaft before towing to prevent damage to the transmission. For additional information, it is recommended that you visit a NISSAN dealer.

**VEHICLE RECOVERY (freeing a stuck vehicle)**

**WARNING**

To avoid vehicle damage, serious personal injury or death when recovering a stuck vehicle:

- Contact a professional towing service to recover the vehicle if you have any questions regarding the recovery procedure.
• Tow chains or cables must be attached only to main structural members of the vehicle.
• Do not use the vehicle tie-downs to tow or free a stuck vehicle.
• Only use devices specifically designed for vehicle recovery and follow the manufacturer’s instructions.
• Always pull the recovery device straight out from the front of the vehicle. Never pull at an angle.
• Route recovery devices so they do not touch any part of the vehicle except the attachment point.

If your vehicle is stuck in sand, snow, mud, etc., use a tow strap or other device designed specifically for vehicle recovery. Always follow the manufacturer’s instructions for the recovery device.

Rocking a stuck vehicle

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Stand clear of a stuck vehicle.</td>
</tr>
<tr>
<td>• Do not spin your tires at high speed. This could cause them to explode and result in serious injury. Parts of your vehicle could also overheat and be damaged.</td>
</tr>
</tbody>
</table>

If your vehicle is stuck in sand, snow, mud, etc., use the following procedure:

1. Turn off the Vehicle Dynamic Control (VDC) System.
2. Make sure the area in front and behind the vehicle is clear of obstructions.
3. Turn the steering wheel right and left to clear an area around the front tires.
4. Slowly rock the vehicle forward and backward.
   • Shift back and forth between R (Reverse) and D (Drive) (Continuously Variable Transmission models) or 1st (Low) and R (Reverse) (manual transmission models).
   • Apply the accelerator as little as possible to maintain the rocking motion.
   • Release the accelerator pedal before shifting between R (Reverse) and D (Drive) (Continuously Variable Transmission models) or 1st (Low) and R (Reverse) (manual transmission models).
   • Do not spin the tires above 35 mph (55 km/h).
5. If the vehicle cannot be freed after a few tries, contact a professional towing service to remove the vehicle.

CLEANING EXTERIOR

In order to maintain the appearance of your vehicle, it is important to take proper care of it.

To protect the paint surfaces, wash your vehicle as soon as you can:

- After a rainfall to prevent possible damage from acid rain.
- After driving on coastal roads.
- When contaminants such as soot, bird droppings, tree sap, metal particles or bugs get on the paint surface.
- When dust or mud builds up on the surface.

Whenever possible, store or park your vehicle inside a garage or in a covered area. When it is necessary to park outside, park in a shady area or protect the vehicle with a body cover.

Be careful not to scratch the paint surface when putting on or removing the body cover.

WASHING

Wash dirt off with a wet sponge and plenty of water. Clean the vehicle thoroughly using a mild soap, a special vehicle soap or general purpose dishwashing liquid mixed with clean, lukewarm (never hot) water.

**CAUTION**

- Do not use car washes that use acid in the detergent. Some car washes, especially brushless ones, use some acid for cleaning. The acid may react with some plastic vehicle components, causing them to crack. This could affect their appearance, and also could cause them not to function properly. Always check with your car wash to confirm that acid is not used.
- Do not wash the vehicle with strong household soap, strong chemical detergents, gasoline or solvents.
- Do not wash the vehicle in direct sunlight or while the vehicle body is hot, as the surface may become water-spotted.

Rinse the vehicle thoroughly with plenty of clean water.

Inside edges, seams and folds on the doors, hatches and hood are particularly vulnerable to the effects of road salt. Therefore, these areas must be cleaned regularly. Take care that the drain holes in the lower edge of the door are open. Spray water under the body and in the wheel wells to loosen the dirt and wash away road salt.

A damp chamois can be used to dry the vehicle to avoid water spots.

WAXING

Regular waxing protects the paint surface and helps retain new vehicle appearance. Polishing is recommended to remove built-up wax residue and to avoid a weathered appearance before re-applying wax. It is recommended that you visit a NISSAN dealer to assist you in choosing the proper product.
• Wax your vehicle only after a thorough washing. Follow the instructions supplied with the wax.
• Do not use a wax containing any abrasives, cutting compounds or cleaners that may damage the vehicle finish.

Machine compounding or aggressive polishing on a base coat/clear coat paint finish may dull the finish or leave swirl marks.

REMOVING SPOTS
Remove tar and oil spots, industrial dust, insects, and tree sap as quickly as possible from the surface of the paint to avoid lasting damage or staining. Special cleaning products are available at a NISSAN dealer or any automotive accessory store. It is recommended that you visit a NISSAN dealer for these products.

UNDERBODY
In areas where road salt is used in winter, it is necessary to clean the underbody regularly in order to prevent dirt and salt from building up and causing the acceleration of corrosion on the underbody and suspension. Before the winter period and again in the spring, the underseal must be checked and, if necessary, re-treated.

GLASS
Use glass cleaner to remove smoke and dust film from the glass surfaces. It is normal for glass to become coated with a film after the vehicle is parked in the hot sun. Glass cleaner and a soft cloth will easily remove this film.

**CAUTION**
When cleaning the inside of the windows, do not use sharp-edged tools, abrasive cleaners or chlorine-based disinfectant cleaners. They could damage the electrical conductors, radio antenna elements or rear window defroster elements.

ALUMINUM ALLOY WHEELS (if so equipped)
Wash the wheels regularly with a sponge dampened in a mild soap solution, especially during winter months in areas where road salt is used. If not removed, road salt can discolor the wheels.

**CAUTION**
Follow the directions below to avoid staining or discoloring the wheels:
• Do not use a cleaner that uses strong acid or alkali contents to clean the wheels.
• Do not apply wheel cleaners to the wheels when they are hot. The wheel temperature should be the same as ambient temperature.
• Rinse the wheel to completely remove the cleaner within 15 minutes after the cleaner is applied.

CHROME PARTS
Clean all chrome parts regularly with a non-abrasive chrome polish to maintain the finish.

TIRE DRESSINGS
NISSAN does not recommend the use of tire dressings. Tire manufacturers apply a coating to the tires to help reduce discoloration of the rubber. If a tire dressing is applied to the tires, it may react with the coating and form a compound. This compound may come off the tire while driving and stain the vehicle paint.
If you choose to use a tire dressing, take the following precautions:

- Use a water-based tire dressing. The coating on the tire dissolves more easily than with an oil-based tire dressing.
- Apply a light coat of tire dressing to help prevent it from entering the tire tread/grooves (where it would be difficult to remove).
- Wipe off excess tire dressing using a dry towel. Make sure the tire dressing is completely removed from the tire tread/grooves.
- Allow the tire dressing to dry as recommended by the tire dressing manufacturer.

Occasionally remove loose dust from the interior trim, plastic parts and seats using a vacuum cleaner or soft bristled brush. Wipe the vinyl and leather (if so equipped) surfaces with a clean, soft cloth dampened in mild soap solution, then wipe clean with a dry, soft cloth.

Regular care and cleaning is required in order to maintain the appearance of the leather (if so equipped).

Before using any fabric protector, read the manufacturer’s recommendations. Some fabric protectors contain chemicals that may stain or bleach the seat material.

Use a cloth dampened only with water to clean the meter and gauge lens.

**WARNING**

Do not use water or acidic cleaners (hot steam cleaners) on the seat. This can damage the seat or occupant classification sensor. This can also affect the operation of the air bag system and result in serious personal injury.

**CAUTION**

- Never use benzine, thinner or any similar material.
- Small dirt particles can be abrasive and damaging to leather surfaces and should be removed promptly. Do not use saddle soap, car waxes, polishes, oils, cleaning fluids, solvents, detergents or ammonia-based cleaners as they may damage the leather’s natural finish.
- Never use fabric protectors unless recommended by the manufacturer.
- Do not use glass or plastic cleaner on meter or gauge lens covers. It may damage the lens cover.
For Alcantara® (if so equipped)

AIR FRESHENERS

Most air fresheners use a solvent that could affect the vehicle interior. If you use an air freshener, take the following precautions:

- Hanging-type air fresheners can cause permanent discoloration when they contact vehicle interior surfaces. Place the air freshener in a location that allows it to hang free and not contact an interior surface.
- Liquid-type air fresheners typically clip on the vents. These products can cause immediate damage and discoloration when spilled on interior surfaces.

Carefully read and follow the manufacturer's instructions before using the air fresheners.

FLOOR MATS (if so equipped)

**WARNING**

To avoid potential pedal interference that may result in a collision, injury or death:

- NEVER place a floor mat on top of another floor mat in the driver front position or install them upside down or backwards.

Use only Genuine NISSAN floor mats, or equivalent floor mats, that are specifically designed for use in your vehicle model and model year.

Properly position the mats in the floorwell using the floor mat positioning hook. For additional information, refer to “Floor mat installation” in this section.

Make sure the floor mat does not interfere with pedal operation.

Periodically check the floor mats to make sure they are properly installed.

After cleaning the vehicle interior, check the floor mats to make sure they are properly installed.

The use of Genuine NISSAN floor mats can extend the life of your vehicle carpet and make it easier to clean the interior. Mats should be maintained with regular cleaning and replaced if they become excessively worn.
Floor mat installation

Your vehicle is equipped with floor mat positioning hook(s). The number and shape of the floor mat positioning hooks for each seating position varies depending on the vehicle.

When installing Genuine NISSAN floor mats, follow the installation instructions provided with the mat and the following:

1. With the ignition in the OFF position, the shift lever in P (Park) position (Continuously Variable Transmission models) or the shift lever in the N (Neutral) position (manual transmission models) and with the parking brake fully applied, position the floor mat in the floorwell so that the floor mat grommet holes are aligned with the hook(s).

2. Secure the grommet holes into the hook(s) and ensure that the floor mat is properly positioned.

3. Make sure the floor mat does not interfere with pedal operation. With the ignition still in the OFF position, the shift lever in the P (Park) position (Continuously Variable Transmission models) or the shift lever in the N (Neutral) position (manual transmission models) and with the parking brake applied, fully apply and release all pedals. The floor mat must not interfere with pedal operation or prevent the pedal from returning to its normal position.

It is recommended that you visit a NISSAN dealer for details about installing the floor mats in your vehicle.

The illustration shows the location of the floor mat positioning hooks.

SEAT BELTS

The seat belts can be cleaned by wiping them with a sponge dampened in a mild soap solution. Allow the belts to dry completely in the shade before using them. For additional information, refer to “Seat belt maintenance” in the “Safety—Seats, seat belts and supplemental restraint system” section of this manual.
WARNING
Do not allow wet seat belts to roll up in the retractor. NEVER use bleach, dye or chemical solvents to clean the seat belts, since these materials may severely weaken the seat belt webbing.

MOST COMMON FACTORS CONTRIBUTING TO VEHICLE CORROSION
Most vehicle corrosion is caused by:
- The accumulation of moisture-retaining dirt and debris in body panel sections, cavities, and other areas.
- Damage to paint and other protective coatings caused by gravel and stone chips or minor traffic collisions.

ENVIRONMENTAL FACTORS INFLUENCE THE RATE OF CORROSION

Moisture
Accumulation of sand, dirt and water on the vehicle body underside can accelerate corrosion. Wet floor coverings will not dry completely inside the vehicle and should be removed for drying to avoid floor panel corrosion.

Relative humidity
Corrosion will be accelerated in areas of high relative humidity, especially those areas where the temperatures stay above freezing and where atmospheric pollution exists and road salt is used.

Temperature
High temperatures accelerate the rate of corrosion to those parts which are not well ventilated.

Air pollution
Industrial pollution, the presence of salt in the air in coastal areas, or heavy road salt use accelerates the corrosion process. Road salt also accelerates the disintegration of paint surfaces.
PROTECT YOUR VEHICLE FROM CORROSION

- Wash and wax your vehicle often to keep the vehicle clean.
- Always check for minor damage to the paint and repair it as soon as possible.
- Keep drain holes at the bottom of the doors open to avoid water accumulation.
- Check the underbody for accumulation of sand, dirt or salt. If present, wash with water as soon as possible.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEVER remove dirt, sand or other debris from the passenger compartment by washing it out with a hose. Remove dirt with a vacuum cleaner or broom.</td>
</tr>
<tr>
<td>Never allow water or other liquids to come in contact with electronic components inside the vehicle as this may damage them.</td>
</tr>
</tbody>
</table>

Chemicals used for road surface de-icing are extremely corrosive. They accelerate corrosion and deterioration of underbody components such as the exhaust system, fuel and brake lines, brake cables, floor pan and fenders.

In winter, the underbody must be cleaned periodically.

For additional protection against rust and corrosion, which may be required in some areas, it is recommended that you visit a NISSAN dealer.

When performing any inspection or maintenance work on your vehicle, always take care to prevent serious accidental injury to yourself or damage to the vehicle. The following are general precautions which should be closely observed.

**WARNING**

- Park the vehicle on a level surface, apply the parking brake securely and block the wheels to prevent the vehicle from moving. For manual transmission models, move the shift lever to N (Neutral). For CVT models, move the shift lever to P (Park).
- Be sure the ignition switch is in the OFF or LOCK position when performing any parts replacement or repairs.
- If you must work with the engine running, keep your hands, clothing, hair and tools away from moving fans, belts and any other moving parts.
- It is advisable to secure or remove any loose clothing and remove any jewelry, such as rings, watches, etc. before working on your vehicle.
- Always wear eye protection whenever you work on your vehicle.
- If you must run the engine in an enclosed space such as a garage, be sure there is proper ventilation for exhaust gases to escape.
- Never get under the vehicle while it is supported only by a jack. If it is necessary to work under the vehicle, support it with safety stands.
- Keep smoking materials, flame and sparks away from the fuel tank and battery.
- Because the fuel lines on gasoline engine models are under high pressure even when the engine is off, it is recommended that you visit a NISSAN dealer for service of the fuel filter or fuel lines.
- Your vehicle is equipped with an automatic engine cooling fan. It may come on at any time without warning, even if the ignition key is in the OFF position and the engine is not running. To avoid injury, always disconnect the negative battery cable before working near the fan.

**CAUTION**

- Do not work under the hood while the engine is hot. Turn the engine off and wait until it cools down.
- Avoid contact with used engine oil and coolant. Improperly disposed engine oil, engine coolant and/or other vehicle fluids can damage the environment. Always conform to local regulations for disposal of vehicle fluid.
- Never leave the engine or the transmission related component harness connector disconnected while the ignition switch is in the ON position.
- Never connect or disconnect the battery or any transistorized component while the ignition switch is in the ON position.

This “Do-it-yourself” section gives instructions regarding only those items which are relatively easy for an owner to perform.

A Genuine NISSAN service manual is also available. For additional information, refer to “Owner’s Manual/Service Manual order information” in the “Technical and consumer information” section of this manual.

You should be aware that incomplete or improper servicing may result in operating difficulties or excessive emissions, and could affect warranty coverage. If in doubt about any servicing, it is recommended that you have it done by a NISSAN dealer.

2. Brake and clutch (if so equipped) fluid reservoir
3. Air cleaner
4. Battery
5. Fuse and relay box
6. Engine coolant reservoir
7. Radiator cap
8. Engine oil dipstick
9. Drive belt location
10. Windshield-washer fluid reservoir
MR16DDT engine
1. Engine oil filler cap
2. Brake and clutch (if so equipped) fluid reservoir
3. Air cleaner
4. Battery
5. Fuse and relay box
6. Engine coolant reservoir
7. Radiator cap
8. Engine oil dipstick
9. Drive belt location
10. Windshield-washer fluid reservoir
11. Relay box (DTRL) (if so equipped)
ENGINE COOLING SYSTEM

The engine cooling system is filled at the factory with a pre-diluted mixture of 50% Genuine NISSAN Long Life Antifreeze/Coolant (blue) and 50% water to provide year-round antifreeze and coolant protection. The antifreeze solution contains rust and corrosion inhibitors. Additional engine cooling system additives are not necessary.

**WARNING**

- Never remove the radiator or coolant reservoir cap when the engine is hot. Wait until the engine and radiator cool down. Serious burns could be caused by high pressure fluid escaping from the radiator. For additional information on precautions, refer to “If your vehicle overheats” found in the “In case of emergency” section of this manual.

- The radiator is equipped with a pressure type radiator cap. To prevent engine damage, use only a Genuine NISSAN radiator cap.

**CAUTION**

- Never use any cooling system additives such as radiator sealer. Additives may clog the cooling system and cause damage to the engine, transmission and/or cooling system.

- When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent. Genuine NISSAN Long Life Antifreeze/Coolant (blue) is pre-diluted to provide antifreeze protection to -34°F (-37°C). If additional freeze protection is needed due to weather where you operate your vehicle, add Genuine NISSAN Long Life Antifreeze/Coolant (blue) concentrate following the directions on the container. If an equivalent coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) is used, follow the coolant manufacturer’s instructions to maintain minimum antifreeze protection to -34°F (-37°C). The use of other types of coolant solutions other than Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent may damage the engine cooling system.

- The life expectancy of the factory-fill coolant is 105,000 miles (168,000 km) or 7 years. Mixing any other type of coolant other than Genuine NISSAN Long Life Antifreeze/Coolant (blue), including Genuine NISSAN Long Life Antifreeze/Coolant (green), or the use of non-distilled water will reduce the life expectancy of the factory-fill coolant. For additional information, refer to the “Maintenance and schedules” section of this manual.
CHECKING ENGINE COOLANT LEVEL

Check the coolant level in the reservoir when the engine is cold. If the coolant level is below the MIN level \(\text{MIN}\), add coolant to the MAX level \(\text{MAX}\). If the reservoir is empty, check the coolant level in the radiator when the engine is cold. If there is insufficient coolant in the radiator, fill the radiator with coolant up to the filler opening and also add it to the reservoir up to the MAX level \(\text{MAX}\).

This vehicle contains Genuine NISSAN Long Life Antifreeze/Coolant (blue). The life expectancy of the factory-fill coolant is 105,000 miles (168,000 km) or 7 years. Mixing any other type of coolant or the use of non-distilled water will reduce the life expectancy of the factory-fill coolant. For additional information, refer to the “Maintenance and schedules” section of this manual.

If the cooling system frequently requires coolant, have it checked. It is recommended that you visit a NISSAN dealer for this service.

For additional information on the location of the engine coolant reservoir, refer to “Engine compartment check locations” in this section.

CHANGING ENGINE COOLANT

A NISSAN dealer can change the engine coolant. The service procedure can be found in the NISSAN Service Manual.

Improper servicing can result in reduced heater performance and engine overheating.

**WARNING**

- To avoid the danger of being scalded, never change the coolant when the engine is hot.
- Never remove the radiator or engine coolant reservoir cap when the engine is hot. Serious burns could be caused by high-pressure fluid escaping from the radiator.
- Avoid direct skin contact with used coolant. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
- Keep coolant out of the reach of children and pets.
ENGINE OIL

Engine coolant must be disposed of properly. Check your local regulations.

CHECKING ENGINE OIL LEVEL

1. Park the vehicle on a level surface and apply the parking brake.
2. Start the engine and let it idle until it reaches operating temperature.
3. Turn off the engine. **Wait more than 10 minutes for the oil to drain back into the oil pan.**
4. Remove the dipstick and wipe it clean. Reinsert it all the way.

Do-it-yourself 8-7
5. Remove the dipstick again and check the oil level. It should be between the H (High) and L (Low) marks. This is the normal operating oil level range. If the oil level is below the L (Low) mark, remove the oil filler cap and pour recommended oil through the opening. Do not overfill.

6. Recheck oil level with the dipstick.

It is normal to add some oil between oil maintenance intervals or during the break-in period, depending on the severity of operating conditions.

CAUTION

- Oil level should be checked regularly. Operating the engine with an insufficient amount of oil can damage the engine, and such damage is not covered by warranty.
- It is normal to add some oil between oil maintenance intervals or during the break-in period, depending on the severity of operating conditions.

Make sure to follow the engine oil changing intervals in the maintenance booklet. Operating under the following conditions may require more frequent oil change:
- repeated short distance driving
- driving in dusty conditions
- stop and go commuting.
2. Start the engine and let it idle until it reaches operating temperature, then turn it off.

3. Remove the oil filler cap A by turning it counterclockwise.

4. Place a large drain pan under the drain plug B.

5. Remove the drain plug B with a wrench by turning it counterclockwise and completely drain the oil.

   If the oil filter is to be changed, remove and replace it at this time. For additional information, refer to “Changing engine oil filter” in this section.

   **WARNING**
   - Prolonged and repeated contact with used engine oil may cause skin cancer.
   - Try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.
   - Keep used engine oil out of reach of children.

   **CAUTION**
   - Be careful not to burn yourself. The engine oil may be hot.
   - Waste oil must be disposed of properly.
   - Check your local regulations.

6. Clean and reinstall the drain plug and a new washer. Securely tighten the drain plug with a wrench. Do not use excessive force.

   **Drain plug tightening torque:**
   25 ft-lb (34 N·m)

7. Refill engine with recommended oil through the oil filler opening, then install the oil filler cap securely.

   For additional information on the drain and refill capacity, refer to “Recommended fluids/lubricants and capacities” in the “Technical and consumer information” section of this manual.

   The drain and refill capacity depends on the oil temperature and drain time. Use these specifications for reference only. Always use the dipstick to determine when the proper amount of oil is in the engine.

8. Start the engine. Check for leakage around the drain plug and oil filter. Correct as required.

9. Turn the engine off and wait more than 10 minutes. Check the oil level with the dipstick. Add engine oil if necessary.

**Do-it-yourself** 8-9
For additional information on the location of the engine oil filler cap, refer to “Engine compartment check locations” in this section.

1. Park the vehicle on a level surface and apply the parking brake.
2. Turn the engine off.
3. Place a large drain pan under the oil filter B.
4. Loosen the oil filter with an oil filter wrench by turning it counterclockwise. Then remove the oil filter by turning it by hand.

**CAUTION**

Be careful not to burn yourself. The engine oil may be hot.

5. Wipe the engine oil filter sealing surface with a clean rag.

**CAUTION**

Be sure to remove any old gasket material remaining on the sealing surface of the engine. Failure to do so could lead to engine damage.

6. Coat the gasket on the new filter with clean engine oil.

7. Screw on the oil filter. Securely tighten oil filter with wrench. Do not use excessive force.

**Oil filter tightening torque:**

18 N\(\cdot\)m (13 ft-lb)

8. Refill engine with recommended oil through the oil filler opening, then install oil filler cap securely.

9. Start the engine and check for leakage around the oil filter. Correct as required.

10. Turn the engine off and wait more than 10 minutes. Check the oil level. Add engine oil if necessary.

For additional information on the location of the engine oil filler cap, refer to “Engine compartment check locations” in this section.

**CONTINUOUSLY VARIABLE TRANSMISSION (CVT) FLUID (if so equipped)**

**CAUTION**

- NISSAN recommends using Genuine NISSAN CVT Fluid NS-3 (or equivalent) ONLY in NISSAN CVTs. Do not mix with other fluids.
- Do not use Automatic Transmission Fluid (ATF) or manual transmission fluid in a NISSAN CVT, as it may damage the CVT. Damage caused by the use of fluids other than as recommended is not covered under NISSAN’s New Vehicle Limited Warranty.
- Using fluids that are not equivalent to Genuine NISSAN CVT Fluid NS-3 may also damage the CVT. Damage caused by the use of fluids other than as recommended is not covered under NISSAN’s New Vehicle Limited Warranty.

When checking or replacement of CVT fluid is required, it is recommended that you visit a NISSAN dealer for servicing.
BRAKE AND CLUTCH (if so equipped) FLUID

For additional brake and clutch fluid specification information, refer to “Recommended fluids/lubricants and capacities” in the “Technical and consumer information” section of this manual.

**WARNING**

- Use only new fluid from a sealed container. Old, inferior or contaminated fluid may damage the brake and clutch (if so equipped) systems. The use of improper fluids can damage the brake and clutch system and affect the vehicle’s stopping ability.
- Clean the filler cap before removing.
- Brake and clutch fluid is poisonous and should be stored carefully in marked containers out of reach of children.

**CAUTION**

Do not spill the fluid on any painted surfaces. This will damage the paint. If fluid is spilled, immediately wash the surface with water.

### BRAKE FLUID

Check the fluid level in the reservoir. If the level is below the MIN line ①, or the brake warning light comes on, add Genuine NISSAN Brake Fluid or equivalent DOT 3 fluid up to the MAX line ②. If fluid must be added frequently, the system should be checked. It is recommended that you visit a NISSAN dealer for this service.

### CLUTCH (if so equipped) FLUID

Check the fluid level in the reservoir. If the level is below the MIN line ①, or the brake warning light comes on, add Genuine NISSAN Brake Fluid or equivalent DOT 3 fluid up to the MAX line ②. If fluid must be added frequently, the system should be checked. It is recommended that you visit a NISSAN dealer for this service.
WINDSHIELD-WASHER FLUID

Add a washer solvent to the washer for better cleaning. In the winter season, add a windshield washer antifreeze. Follow the manufacturer’s instructions for the mixture ratio.

Refill the reservoir more frequently when driving conditions require an increased amount of windshield-washer fluid.

Recommended fluid is Genuine NISSAN Windshield Washer Concentrate Cleaner & Anti-freeze or equivalent.

CAUTION

- Do not substitute engine antifreeze coolant for windshield-washer fluid. This may result in damage to the paint.
- Do not fill the windshield-washer fluid reservoir with washer fluid concentrates at full strength. Some methyl alcohol based washer fluid concentrates may permanently stain the grille if spilled while filling the windshield-washer fluid reservoir.

Pre-mix washer fluid concentrates with water to the manufacturer’s recommended levels before pouring the fluid into the windshield-washer fluid reservoir. Do not use the windshield-washer fluid reservoir to mix the washer fluid concentrate and water.
BATTERY

- Keep the battery surface clean and dry. Clean the battery with a solution of baking soda and water.
- Make certain the terminal connections are clean and securely tightened.
- If the vehicle is not to be used for 30 days or longer, disconnect the negative (-) battery terminal cable to prevent discharge.

NOTE:
Care should be taken to avoid situations that can lead to potential battery discharge and potential no-start conditions such as:
1. Installation or extended use of electronic accessories that consume battery power when the engine is not running (Phone chargers, GPS, DVD players, etc).
2. Vehicle is not driven regularly and/or only driven short distances.
In these cases, the battery may need to be charged to maintain battery health.

WARNING
- Do not expose the battery to flames, an electrical spark or a cigarette. Hydrogen gas generated by the battery is explosive. Explosive gases can cause blindness or injury. Do not allow battery fluid to contact your skin, eyes, fabrics or painted surfaces. Sulfuric acid can cause blindness or injury. After touching a battery or battery cap, do not touch or rub your eyes. Thoroughly wash your hands. If the acid contacts your eyes, skin or clothing, immediately flush with water for at least 15 minutes and seek medical attention.
- Do not operate the vehicle if the fluid in the battery is low. Low battery fluid can cause a higher load on the battery which can generate heat, reduce battery life, and in some cases lead to an explosion.
- When working on or near a battery, always wear suitable eye protection and remove all jewelry.

- Battery posts, terminals and related accessories contain lead and lead compounds. Wash hands after handling.
- Keep battery out of the reach of children.
- Do not tip the battery. Keep the vent caps tight and the battery level.

8-14  Do-it-yourself
1. Remove the vent caps with a screwdriver as shown. Use a cloth to protect the battery case.

2. Check the fluid level in each cell. If it is necessary to add fluid, add only distilled water to bring the level up to the bottom of the filler opening. **Do not overfill.** Reinstall the vent caps.

Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.

**JUMP STARTING**

If jump starting is necessary, refer to 'Jump starting' in the 'In case of emergency' section of this manual. If the engine does not start by jump starting, the battery may have to be replaced. It is recommended that you visit a NISSAN dealer for this service.
VARIABLE VOLTAGE CONTROL SYSTEM

The current sensor A is located near the battery along the negative battery cable. If you add electrical accessories to your vehicle, be sure to ground them to a suitable body ground such as the frame or engine block area.

CAUTION

- Do not ground accessories directly to the battery terminal. Doing so will bypass the variable voltage control system and the vehicle battery may not charge completely.
- Use electrical accessories with the engine running to avoid discharging the vehicle battery.

Your vehicle is equipped with a variable voltage control system. This system measures the amount of electrical discharge from the battery and controls voltage generated by the generator.

WARNING

Be sure the ignition switch is in the OFF or LOCK position before servicing drive belt. The engine could rotate unexpectedly.

1. Automatic tensioner pulley
2. Generator pulley
3. Water pump pulley
4. Air conditioner compressor pulley (if so equipped)
5. Crankshaft pulley
1. Visually inspect the belt for signs of unusual wear, cuts, or fraying. If the belt is in poor condition, have it replaced or adjusted. It is recommended that you visit a NISSAN dealer for this service.

2. Have the belt checked regularly for condition.

---

**SPARK PLUGS**

**REPLACING SPARK PLUGS**

**WARNING**
Be sure the engine and ignition switch are off and that the parking brake is engaged securely.

**CAUTION**
Be sure to use the correct socket to remove the spark plugs. An incorrect socket can damage the spark plugs.

Platinum-tipped spark plugs (except California models)

It is not necessary to replace platinum-tipped spark plugs as frequently as conventional type spark plugs because they last much longer. Follow the maintenance log shown in the ‘Maintenance and schedules’ section of this manual. Do not service platinum-tipped spark plugs by cleaning or regapping.

- Always replace spark plugs with recommended or equivalent ones.

If replacement is required, it is recommended that you visit a NISSAN dealer for this service.

Iridium-tipped spark plugs (MR16DDT engine or California models only)

It is not necessary to replace iridium-tipped spark plugs as frequently as conventional type spark plugs because they last much longer. Follow the maintenance log shown in the ‘Maintenance and schedules’ section in the manual. Do not service iridium-tipped spark plugs by cleaning or regapping.

_Do-it-yourself_ 8-17
Always replace spark plugs with recommended or equivalent ones.
If replacement is required, it is recommended that you visit a NISSAN dealer for this service.

The air cleaner filter should not be cleaned and reused. Replace it according to the maintenance log shown in the “Maintenance and schedules” section of this manual.

To remove the air cleaner filter:
1. Unlatch the retaining clips A.
2. Pull up at points B and remove.
3. Pull up and remove air cleaner housing C.
4. Remove the air cleaner filter. Wipe the inside of the air cleaner filter housing and the cover with a damp cloth, then replace air cleaner filter.

NOTE:
After installing a new air cleaner, make sure the air cleaner cover is seated in the housing and latch the clips.

WARNING
- Operating the engine with the air cleaner removed can cause you or others to be burned. The air cleaner not only cleans the air, it stops the flame if the engine backfires. If it isn't there, and the engine backfires, you could be burned. Do not drive with the air cleaner removed, and be careful when working on the engine with the air cleaner removed.
- Never pour fuel into the throttle body or attempt to start the engine with the air cleaner removed. Doing so could result in serious injury.
IN-CABIN MICROFILTER

The in-cabin microfilter restricts the entry of airborne dust and pollen particles and reduces some objectionable outside odors. The filter is located behind the glove box. For additional information, refer to the “Maintenance and schedules” section of this manual for change intervals.

If replacement is required, it is recommended that you visit a NISSAN dealer for this service.

CLEANING

If your windshield is not clear after using the windshield-washer or if a wiper blade chatters when running, wax or other material may be on the blade or windshield.

Clean the outside of the windshield with a washer fluid or a mild detergent. Your windshield is clean if beads do not form when rinsing with clear water.

Clean each blade by wiping it with a cloth soaked in a washer fluid or a mild detergent. Then rinse the blades with clear water. If your windshield is still not clear after cleaning the blades and using the wiper, install new windshield wiper blades.

CAUTION

Worn windshield wiper blades can damage the windshield and impair driver vision.

REPLACING

Replace the wiper blades if they are worn.
To replace the windshield wiper blades, follow the procedure below:

1. When ignition switch is ON or within 60 seconds after placing the ignition switch from the ON to OFF position, place the windshield wiper and washer lever into the OFF position.
2. Rapidly lift the windshield wiper and washer lever A upwards twice within 0.5 seconds. This action will cause the wipers to automatically take the service position.

Do-it-yourself 8-19
3. Once the wipers are in the service position, push the release tab B.

4. Move the wiper blade down C and remove.

5. Insert the new wiper blade onto the wiper arm until it clicks into place.

6. Rotate the wiper blade so the dimple is in the groove.

7. Finally, lift the windshield wiper and washer lever to the mist position D once and release. This action will cause the wipers to resume the set position.

---

**CAUTION**

- After wiper blade replacement, return the wiper arm to its original position; otherwise it may be damaged when the hood is opened.
- Make sure the wiper blades contact the glass; otherwise the arms may be damaged from wind pressure.
If you wax the surface of the hood, be careful not to let wax get into the washer nozzle (E). This may cause clogging or improper windshield-washer operation. If wax gets into the nozzle, remove it with a needle or small pin (E).

**BRAKES**

If the brakes do not operate properly, have the brakes checked. It is recommended that you visit a NISSAN dealer for this service.

**Self-adjusting brakes**

Your vehicle is equipped with self-adjusting brakes.

The front (and rear-if so equipped) disc-type brakes self-adjust every time the brake pedal is applied. The rear drum-type brakes (if so equipped) self-adjust every time the parking brake is applied.

**WARNING**

Have your brake system checked if the brake pedal height does not return to normal. It is recommended that you visit a NISSAN dealer for this service.

**Brake pad wear indicators**

The disc brake pads on your vehicle have audible wear indicators. When a brake pad requires replacement, a high pitched scraping or screeching sound will be heard when the vehicle is in motion. The noise will be heard whether or not the brake pedal is depressed. Have the brakes checked as soon as possible if the wear indicator sound is heard.

Under some driving or climate conditions, occasional brake squeak, squeal or other noise may be heard. Occasional brake noise during light to moderate stops is normal and does not affect the function or performance of the brake system.

**Proper brake inspection intervals should be followed.** For additional information regarding brake inspections, refer to the appropriate maintenance schedule information in the “Maintenance and schedules” section of this manual.

---

Do-it-yourself 8-21
Two types of fuses are used. Type A is used in the fuse boxes in the engine compartment. Type B is used in the passenger compartment fuse box.

Type A fuses can be installed in the engine compartment and passenger compartment fuse boxes.

If a type A fuse is used to replace a type B fuse, the type A fuse will not be level with the fuse pocket as shown in the illustration. This will not affect the performance of the fuse. Make sure the fuse is installed in the fuse box securely.

Type B fuses cannot be installed in the under hood fuse boxes. Only use type A fuses in the under hood fuse boxes.

**NOTE:**
Your vehicle may not be equipped with all fuses listed on the fuse label.

---

**ENGINE COMPARTMENT**

**WARNING**

Never use a fuse of higher or lower amperage rating than that specified on the fuse box cover. This could damage the electrical system or electronic control units or cause a fire.
If any electrical equipment does not come on, check for an open fuse.

1. Be sure the ignition switch and the headlight switch are OFF.
2. Open the engine hood.
3. Remove the fuse box cover by pushing the tab \( A \) and lifting the cover up.
4. Remove the fuse with the fuse puller, which is located in the center of the fuse block in the passenger compartment.
5. If the fuse is open \( B \), replace it with a new fuse \( C \).
6. If a new fuse also opens, have the electrical system checked and repaired. It is recommended that you visit a NISSAN dealer for this service.

**NOTE:**

*Your vehicle may not be equipped with all fuses listed on the fuse label.*

---

**Fusible links**

If the electrical equipment does not operate and fuses are in good condition, check the fusible links. If any of these fusible links are melted, replace with only Genuine NISSAN parts.
Never use a fuse of higher or lower ampere rating than that specified on the fuse box cover. This could damage the electrical system or electronic control units or cause a fire.

If any electrical equipment does not operate, check for an open fuse.

**NOTE:**

The fuse box is located on the driver’s side of the instrument panel.

1. Be sure the ignition switch and the headlight switch are OFF.
2. Remove the fuse box cover \( A \) with a suitable tool. Use a cloth to avoid damaging the trim.
3. Locate the fuse that needs to be replaced.
4. Remove the fuse with the fuse puller \( B \).
5. If the fuse is open \( C \), replace it with an equivalent good fuse \( D \).
6. Push the fuse box cover to install.

If a new fuse also opens, have the electrical system checked and repaired. It is recommended that you visit a NISSAN dealer for this service.

**NOTE:**

Your vehicle may not be equipped with all fuses listed on the fuse label.
Extended storage switch

If any electrical equipment does not operate, remove the extended storage switch and check for an open fuse.

NOTE:
The extended storage switch is used for long term vehicle storage. Even if the extended storage switch is broken it is not necessary to replace it. Replace only the open fuse in the switch with a new fuse.

How to replace the extended storage switch:
1. To remove the extended storage switch, be sure the ignition switch is in the OFF or LOCK position.
2. Be sure the headlight switch is in the OFF position.
3. Remove the fuse box cover.
4. Pinch the locking tabs A and B found on each side of the storage switch.
5. Pull the storage switch straight out from the fuse box C.

CAUTION
Be careful not to allow children to swallow the battery or removed parts.
KEY FOB (if so equipped)

Replace the battery in the key fob as follows:

1. Remove the screw A.

2. Insert a small screwdriver into the slit of the corner B and twist it to separate the upper part from the lower part. Use a cloth to protect the casing.

3. Replace the battery with a new one.
   - Do not touch the internal circuit and electric terminals as doing so could cause a malfunction.
   - Make sure that the + side faces the bottom of the case C.

Recommended battery: CR1620 or equivalent.

4. Close the lid and install the screw securely.

5. Operate the buttons to check its operation.

If you need assistance with replacement, it is recommended that you visit a NISSAN dealer for this service.

If the battery is removed for any reason other than replacement, perform step 5.

- An improperly disposed battery can hurt the environment. Always confirm local regulations for battery disposal.

- The key fob is water-resistant; however, if it does get wet, immediately wipe completely dry.

- The operational range of the key fob extends to approximately 33 ft (10 m) from the vehicle. This range may vary with conditions.

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation of the device.

FCC Notice:
For USA:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
NISSAN INTELLIGENT KEY® (if so equipped)

Replace the battery in the Intelligent Key as follows:

1. Remove the mechanical key from the Intelligent Key.
2. Insert a small flathead screwdriver into the slit of the corner and twist it to separate the upper part from the lower part. Place a cloth over the screwdriver to protect the casing.
3. Replace the battery with a new one.
   Recommended battery: CR2025 or equivalent.
   • Do not touch the internal circuit and electric terminals as doing so could cause a malfunction.
   • Hold the battery by the edges. Holding the battery across the contact points will seriously deplete the storage capacity.
   • Make sure that the + side faces the bottom of the lower part.
4. Close the lid securely as illustrated with C and D.
5. Operate the buttons to check the operation.
   If you need assistance with replacement, it is recommended that you visit a NISSAN dealer for this service.

FCC Notice:
For USA:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Note:
Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
For Canada:
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
HEADLIGHTS
For additional information on headlight bulb replacement, refer to the instructions outlined in this section.

Replacing the halogen headlight bulb (if so equipped)

NOTE:
The headlight is a semi-sealed beam type which used a replaceable headlight (halogen) bulb. They can be replaced from inside the engine compartment without removing the headlight assembly.

CAUTION
- Aiming is not necessary after replacing the bulb. When aiming adjustment is necessary, it is recommended that you visit a NISSAN dealer for this service.
- Do not leave the headlight assembly open without a bulb installed for a long period of time. Dust, moisture, smoke, etc. entering the headlight body may affect bulb performance. Remove the bulb from the headlight assembly just before a replacement bulb is installed.

Do-it-yourself 8-29
• Only touch the base when handling the bulb. Never touch the glass envelope. Touching the glass could significantly affect bulb life and/or headlight performance.

• High pressure halogen gas is sealed inside the halogen bulb. The bulb may break if the glass envelope is scratched or the bulb is dropped.

• Use the same number and wattage as shown in the chart.

1. Rotate the (high beam) cover \(A\) counterclockwise to access the (high beam) bulb socket \(C\). Rotate the bulb socket \(C\) counterclockwise and remove bulb.

2. Rotate the (low beam) cover \(B\) (if so equipped) counterclockwise to access the (low beam) bulb socket \(D\) (if so equipped). Rotate the bulb socket \(D\) (if so equipped) counterclockwise and remove bulb.

3. Rotate the side marker bulb socket \(E\) counterclockwise and remove bulb.

4. Rotate the turn signal bulb socket \(F\) counterclockwise and remove bulb \(G\).

Reverse instructions to install bulbs and replace fender protector.

**WARNING**

Do not touch bulb by hand while it is lit or right after being turned off. Burning may result.

**CAUTION**

• Do not touch glass surface of the bulb with bare hands or allow oil or grease to get on it to prevent damage to bulb.

• Do not leave the bulb out of the lamp reflector for a long time because dust, moisture, smoke, etc. may affect the performance of the lamp.

• Fog may temporarily form inside the lens of the exterior lights in the rain or in a car wash. A temperature difference between the inside and the outside of the lens causes the fog. This is not a malfunction. If large drops of water collect inside the lens, it is recommended that you visit a NISSAN dealer for servicing.
Replacing the LED headlight bulb (if so equipped)
If LED headlight bulb replacement is required, it is recommended that you visit a NISSAN dealer for this service.

TURN SIGNAL BULB
To replace the turn signal bulb follow the instructions listed in the "Replacing the halogen headlight bulb" found in this section.

FOG LIGHTS (if so equipped)
For additional information on fog light bulb replacement, refer to the instructions outlined in this section.
Replacing the fog light bulb

**CAUTION**

- High pressure halogen gas is sealed inside the halogen bulb. The bulb may break if the glass envelope is scratched or the bulb is dropped.
- When handling the bulb, do not touch the glass envelope.
- Use the same number and wattage as originally installed as shown in the chart.
- Do not leave the bulb out of the fog light for a long period of time as dust, moisture and smoke may enter the fog light body and affect the performance of the fog light.

1. Disconnect the negative battery cable.
2. Access to the fog light is in front of and behind the front tire and the fascia.
3. Remove the fasteners (A); carefully pull back the front fender protector.
4. Rotate the bulb (B) counterclockwise and pull out to remove.
5. Remove by pulling straight off the fog light. Do not shake or rotate the bulb when removing it.
6. Install the new bulb in the reverse order of removal.

10. Rear combination light

Replacement procedures
All other lights are either type A, B, C or D. When replacing a bulb, first remove the lens, lamp and/or cover.

Indicates bulb removal
Indicates bulb installation
WHEELS AND TIRES

If you have a flat tire, refer to “Flat tire” in the “In case of emergency” section of this manual.

TIRE PRESSURE

Tire Pressure Monitoring System (TPMS)

⚠️ WARNING

Radio waves could adversely affect electric medical equipment. Those who use a pacemaker should contact the electric medical equipment manufacturer for the possible influences before use.

This vehicle is equipped with the Tire Pressure Monitoring System (TPMS). It monitors tire pressure of all tires except the spare. When the low tire pressure warning light is lit and the CHECK TIRE PRES (vehicles without a vehicle information display) warning is displayed in the odometer, or the “Tire Pressure Low — Add Air” (vehicles with a vehicle information display) appears in the vehicle information display, one or more of your tires is significantly under-inflated.

The TPMS will activate only when the vehicle is driven at speeds above 16 mph (25 km/h). Also, this system may not detect a sudden drop in tire pressure (for example a flat tire while driving).

For additional information, refer to “Low tire pressure warning light” in the “Instruments and controls” section, “Tire Pressure Monitoring System (TPMS)” in the “Starting and driving” section, and “Flat tire” in the “In case of emergency” section of this manual.

Tire inflation pressure

Check the tire pressures (including the spare) often and always prior to long distance trips. The recommended tire pressure specifications are shown on the F.M.V.S.S./C.M.V.S.S. certification label or the Tire and Loading Information label under the “Cold Tire Pressure” heading. The Tire and Loading Information label is affixed to the driver side center pillar. Tire pressures should be checked regularly because:

- Most tires naturally lose air over time.
- Tires can lose air suddenly when driven over potholes or other objects or if the vehicle strikes a curb while parking.

The tire pressures should be checked when the tires are cold. The tires are considered COLD after the vehicle has been parked for 3 or more hours, or driven less than 1 mile (1.6 km) at moderate speeds.

The TPMS with Easy-Fill Tire Alert (if so equipped) provides visual and audible signals outside the vehicle for inflating tires to the recommended COLD tire pressure. For additional information, refer to “TPMS with Easy-Fill Tire Alert” in the “Starting and driving” section of this manual.
Incorrect tire pressure, including under inflation, may adversely affect tire life and vehicle handling.

**WARNING**

- Improperly inflated tires can fail suddenly and cause an accident.

- The Gross Vehicle Weight Rating (GVWR) is located on the F.M.V.S.S./C.M.V.S.S. certification label. The vehicle weight capacity is indicated on the Tire and Loading Information label. Do not load your vehicle beyond this capacity. Overloading your vehicle may result in reduced tire life, unsafe operating conditions due to premature tire failure, or unfavorable handling characteristics and could also lead to a serious accident. Loading beyond the specified capacity may also result in failure of other vehicle components.

- Before taking a long trip, or whenever you heavily load your vehicle, use a tire pressure gauge to ensure that the tire pressures are at the specified level.

- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.
Tire and Loading Information label

1. Seating capacity: The maximum number of occupants that can be seated in the vehicle.

3. Original tire size: The size of the tires originally installed on the vehicle at the factory.

4. Cold tire pressure: Inflate the tires to this pressure when the tires are cold. Tires are considered COLD after the vehicle has been parked for 3 or more hours, or driven less than 1 mile (1.6 km) at moderate speeds. The recommended cold tire inflation is set by the manufacturer to provide the best balance of tire wear, vehicle handling, driveability, tire noise, etc., up to the vehicle’s GVWR.

5. Tire size – refer to “Tire labeling” in this section.

Checking tire pressure

1. Remove the valve stem cap from the tire.
2. Press the pressure gauge squarely onto the valve stem. Do not press too hard or force the valve stem sideways, or air will escape. If the hissing sound of air escaping from the tire is heard while checking the pressure, reposition the gauge to eliminate this leakage.
3. Remove the gauge.
4. Read the tire pressure on the gauge stem and compare to the specification shown on the Tire and Loading Information label.
5. Add air to the tire as needed. If too much air is added, press the core of the valve stem briefly with the tip of the gauge stem to release pressure. Recheck the pressure and add or release air as needed.
6. Install the valve stem cap.
7. Check the pressure of all other tires, including the spare.

TIRE LABELING

Federal law requires tire manufacturers to place standardized information on the sidewall of all tires. This information identifies and describes the fundamental characteristics of the tire and also provides the tire identification number (TIN) for safety standard certification. The TIN can be used to identify the tire in case of a recall.

Example

1. **Tire size (example: P215/65R15 95H)**
   1. **P** The “P” indicates the tire is designed for passenger vehicles (not all tires have this information).
   2. Three-digit number (215): This number gives the width in millimeters of the tire from sidewall edge to sidewall edge.
   3. Two-digit number (65): This number, known as the aspect ratio, gives the tire’s ratio of height to width.
   4. **R** The “R” stands for radial.
   5. Two-digit number (15): This number is the wheel or rim diameter in inches.

   Example

   - P
   - 215
   - 65
   - R
   - 15
   - 95
   - H
   - 1 2 3 4 5 6 7
6. Two- or three-digit number (95): This number is the tire's load index. It is a measurement of how much weight each tire can support. You may not find this information on all tires because it is not required by law.

7. H: Tire speed rating. You should not drive the vehicle faster than the tire speed rating.

---

Example

<table>
<thead>
<tr>
<th>DOT</th>
<th>XX</th>
<th>XX</th>
<th>XXX</th>
<th>XXXX</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
</tr>
</tbody>
</table>

**Example**

2. TIN (Tire Identification Number) for a new tire (example: DOT XX XX XXX XXXX)
   1. DOT: Abbreviation for the "Department Of Transportation". The symbol can be placed above, below or to the left or right of the Tire Identification Number.
   2. Two-digit code: Manufacturer's identification mark.
   3. Two-digit code: Tire size.
   4. Three-digit code: Tire type code (Optional).
   5. Four numbers represent the week and year the tire was built. For example, the numbers 3103 means the 31st week of 2003. If these numbers are missing then look on the other sidewall of the tire.
③ Tire ply composition and material
The number of layers or plies of rubber-coated fabric in the tire. Tire manufacturers also must indicate the materials in the tire, which include steel, nylon, polyester and others.

④ Maximum permissible inflation pressure
This number is the greatest amount of air pressure that should be put in the tire. Do not exceed the maximum permissible inflation pressure.

⑤ Maximum load rating
This number indicates the maximum load in kilograms and pounds that can be carried by the tire. When replacing the tires on the vehicle, always use a tire that has the same load rating as the factory installed tire.

⑥ Term of “tubeless” or “tube type”
Indicates whether the tire requires an inner tube (“tube type”) or not (“tubeless”).

⑦ The word “radial”
The word “radial” is shown if the tire has radial structure.

⑧ Manufacturer or brand name
Manufacturer or brand name is shown.

Other Tire-related Terminology
In addition to the many terms that are defined throughout this section, Intended Outboard Sidewall is (1) the sidewall that contains a whitewall, bears white lettering or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same molding on the other sidewall of the tire, or (2) the outward facing sidewall of an asymmetrical tire that has a particular side that must always face outward when mounted on a vehicle.

TYPES OF TIRES

⚠️ WARNING
- When changing or replacing tires, be sure all four tires are of the same type (i.e., Summer, All Season or Snow) and construction. A NISSAN dealer may be able to help you with information about tire type, size, speed rating and availability.
- Replacement tires may have a lower speed rating than the factory equipped tires, and may not match the potential maximum vehicle speed. Never exceed the maximum speed rating of the tire.
- Replacing tires with those not originally specified by NISSAN could affect the proper operation of the low tire pressure warning system.
Always use tires of the same type, size, brand, construction and tread pattern on all four wheels. Failure to do so may result in a circumference difference between tires on the front and rear axles which can cause the Vehicle Dynamic Control (VDC) system to malfunction resulting in personal injury or death, excessive tire wear and may damage the transmission and differential gears.

For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

All season tires
NSXAN specifies All Season tires on some models to provide good performance all year, including snowy and icy road conditions. All Season tires are identified by ALL SEASON and/or M&S on the tire sidewall. Snow tires have better snow traction than All Season tires and may be more appropriate in some areas.

Summer tires
NSXAN specifies summer tires on some models to provide superior performance on dry roads. Summer tire performance is substantially reduced in snow and ice. Summer tires do not have the tire traction rating ‘M&S’ on the tire sidewall.

If you plan to operate your vehicle in snowy or icy conditions, NSXAN recommends the use of SNOW tires or ALL SEASON tires on all four wheels.

Snow tires
If snow tires are needed, it is necessary to select tires equivalent in size and load rating to the original equipment tires. If you do not, it can adversely affect the safety and handling of your vehicle.

Generally, snow tires have lower speed ratings than factory equipped tires and may not match the potential maximum vehicle speed. Never exceed the maximum speed rating of the tire.

If you install snow tires, they must be the same size, brand, construction and tread pattern on all four wheels.

TIRE CHAINS

**CAUTION**

Tire chains/cables should not be installed on 205/50R17 and 215/45ZR18 size tires. Installation of the tire chains/cables on 205/50R17 and 215/45ZR18 size tires will cause damage to the vehicle. If you plan to use tire chains/cables, you should install 205/55R16 size tires on your vehicle.

Use of tire chains may be prohibited according to location. Check the local laws before installing tire chains. When installing tire chains, make sure they are the proper size for the tires on your vehicle and are installed according to the chain manufacturer’s suggestions. Use only SAE class “S” chains. Class “S” chains are used on vehicles with restricted tire to vehicle clearance. Vehicles that can use Class “S” chains
are designed to meet the minimum clearances between the tire and the closest vehicle suspension or body component required to accommodate the use of a winter traction device (tire chains or cables). The minimum clearances are determined using the factory equipped tires. Other types may damage your vehicle. Use chain tensioners when recommended by the tire chain manufacturer to ensure a tight fit. Loose end links of the tire chain must be secured or removed to prevent the possibility of whipping action damage to the fenders or underbody. If possible, avoid fully loading your vehicle when using tire chains. In addition, drive at a reduced speed. Otherwise, your vehicle may be damaged and/or vehicle handling and performance may be adversely affected.

Tire chains must be installed only on the front wheels and not on the rear wheels.

Never install tire chains on a TEMPORARY USE ONLY spare tire.

Do not use tire chains on dry roads. Driving with chains in such conditions can cause damage to the various mechanisms of the vehicle due to some overstress.

CHANGING WHEELS AND TIRES

Tire rotation

NISSAN recommends rotating the tires every 5,000 miles (8,000 km).

For additional information on tire replacing procedures, refer to “Flat tire” in the “In case of emergency” section of this manual.

As soon as possible, tighten the wheel nuts to the specified torque with a torque wrench.

Wheel nut tightening torque:
83 ft-lb (113 N·m)

The wheel nuts must be kept tightened to specifications at all times. It is recommended that wheel nuts be tightened to specification at each tire rotation interval.

**WARNING**

- After rotating the tires, check and adjust the tire pressure.
- Retighten the wheel nuts when the vehicle has been driven for 600 miles (1,000 km) (also in cases of a flat tire, etc.).
- Do not include the spare tire in the tire rotation.
- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.
Tire wear and damage

1. Wear indicator
2. Location mark

### WARNING
- Tires should be periodically inspected for wear, cracking, bulging or objects caught in the tread. If excessive wear, cracks, bulging or deep cuts are found, the tire(s) should be replaced.
- The original tires have built-in tread wear indicators. When the wear indicators are visible, the tire(s) should be replaced.
- Tires degrade with age and use. Have tires, including the spare, over 6 years old checked by a qualified technician because some tire damage may not be obvious. Replace the tires as necessary to prevent tire failure and possible personal injury.
- Improper service of the spare tire may result in serious personal injury. If it is necessary to repair the spare tire, it is recommended that you visit a NISSAN dealer for this service.
- For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

Replacing wheels and tires

When replacing a tire, use the same size, tread design, speed rating and load carrying capacity as originally equipped. Recommended types and sizes are shown in ‘Wheels and tires’ in the ‘Technical and consumer information’ section of this manual.

### WARNING
- The use of tires other than those recommended or the mixed use of tires of different brands, construction (bias, bias-belted or radial), or tread patterns can adversely affect the ride, braking, handling, VDC system, ground clearance, body-to-tire clearance, tire chain clearance, speedometer calibration, headlight aim and bumper height. Some of these effects may lead to accidents and could result in serious personal injury.
• If your vehicle was originally equipped with four tires that were the same size and you are only replacing two of the four tires, install the new tires on the rear axle. Placing new tires on the front axle may cause loss of vehicle control in some driving conditions and cause an accident and personal injury.

• If the wheels are changed for any reason, always replace with wheels which have the same off-set dimension. Wheels of a different off-set could cause premature tire wear; degrade vehicle handling characteristics, affect the VDC system and/or interfere with the brake discs. Such interference can lead to decreased braking efficiency and/or early brake pad/shoe wear. For additional information on wheel-off set dimensions, refer to “Wheels and tires” in the “Technical and consumer information” section of this manual.

• When replacing a wheel without the TPMS such as the spare tire, the TPMS will not function and the low tire pressure warning light will flash for approximately one minute. The light will remain on after one minute. Have your tires replaced and/or TPMS system reset as soon as possible. It is recommended that you visit a NISSAN dealer for this service.

• Replacing tires with those not originally specified by NISSAN could affect the proper operation of the TPMS.

• The TPMS sensor may be damaged if it is not handled correctly. Be careful when handling the TPMS sensor.

• When replacing the TPMS sensor, the ID registration may be required. Contact a NISSAN dealer for ID registration.

• Do not use a valve stem cap that is not specified by NISSAN. The valve stem cap may become stuck.

• Be sure that the valve stem caps are correctly fitted. Otherwise the valve may be clogged up with dirt and cause a malfunction or loss of pressure.

• Do not install a damaged or deformed wheel or tire even if it has been repaired. Such wheels or tires could have structural damage and could fail without warning.

• The use of retread tires is not recommended.

• For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.

Wheel balance

Unbalanced wheels may affect vehicle handling and tire life. Even with regular use, wheels can get out of balance. Therefore, they should be balanced as required.

Wheel balance service should be performed with the wheels off the vehicle. Spin balancing the wheels on the vehicle could lead to mechanical damage.

• For additional information regarding tires, refer to “Important Tire Safety Information” (US) or “Tire Safety Information” (Canada) in the Warranty Information Booklet.
Care of wheels

- Wash the wheels when washing the vehicle to maintain their appearance.
- Clean the inner side of the wheels when the wheel is changed or the underside of the vehicle is washed.
- Do not use abrasive cleaners when washing the wheels.
- Inspect wheel rims regularly for dents or corrosion. Such damage may cause loss of pressure or poor seal at the tire bead.
- NISSAN recommends waxing the road wheels to protect against road salt in areas where it is used during winter.

Spare tire (TEMPORARY USE ONLY spare tire)

When replacing a wheel without the TPMS such as the spare tire, the TPMS will not function.

Observe the following precautions if the TEMPORARY USE ONLY spare tire must be used. Otherwise, your vehicle could be damaged or involved in an accident:

**WARNING**

- The spare tire should be used for emergency use only. It should be replaced with the standard tire at the first opportunity to avoid possible tire or differential damage.
- Drive carefully while the TEMPORARY USE ONLY spare tire is installed. Avoid sharp turns and abrupt braking while driving.
- Periodically check spare tire inflation pressure. Always keep the pressure of the TEMPORARY USE ONLY spare tire at 420 kPa, 4.2 bar (60 psi).
- With the TEMPORARY USE ONLY spare tire installed do not drive the vehicle at speeds faster than 50 mph (80 km/h).
- When driving on roads covered with snow or ice, the TEMPORARY USE ONLY spare tire should be used on the rear wheels and the original tire used on the front wheels (drive wheels).

**CAUTION**

- Tire tread of the TEMPORARY USE ONLY spare tire will wear at a faster rate than the standard tire. Replace the spare tire as soon as the tread wear indicators appear.
- Do not use the spare tire on other vehicles.
- Do not use more than one spare tire at the same time.
- Do not tow a trailer when the TEMPORARY USE ONLY spare tire is installed.

- Do not use tire chains on a TEMPORARY USE ONLY spare tire. Tire chains will not fit properly and may cause damage to the vehicle.
- Because the TEMPORARY USE ONLY spare tire is smaller than the original tire, ground clearance is reduced. To avoid damage to the vehicle, do not drive over obstacles. Also, do not drive the vehicle through an automatic car wash since it may get caught.

</table>
Some day-to-day and regular maintenance is essential to maintain your vehicle good mechanical condition, as well as its emissions and engine performance.

It is the owner’s responsibility to make sure that the scheduled maintenance, as well as general maintenance, is performed.

As the vehicle owner, you are the only one who can ensure that your vehicle receives proper maintenance. You are a vital link in the maintenance chain.

GENERAL MAINTENANCE

General maintenance includes those items which should be checked during normal day-to-day operation. They are essential for proper vehicle operation. It is your responsibility to perform these procedures regularly as prescribed.

Performing general maintenance checks requires minimal mechanical skill and only a few general automotive tools.

These checks or inspections can be done by yourself, a qualified technician or, if you prefer, a NISSAN dealer.

SCHEDULED MAINTENANCE

The maintenance items listed in this section are required to be serviced at regular intervals. However under severe driving conditions, additional or more frequent maintenance will be required.

WHERE TO GO FOR SERVICE

If maintenance service is required or your vehicle appears to malfunction, have the systems checked and serviced. It is recommended that you visit a NISSAN dealer for this service.

NISSAN technicians are well-trained specialists and are kept up-to-date with the latest service information through technical bulletins, service tips and training programs. They are completely qualified to work on NISSAN vehicles before work begins.

You can be confident that a NISSAN dealer’s service department can perform the service needed to meet the maintenance requirements on your vehicle.

During the normal day-to-day operation of the vehicle, general maintenance should be performed regularly as prescribed in this section. If you detect any unusual sounds, vibrations or smells, be sure to check for the cause or have it checked promptly. In addition, it is recommended that you visit a NISSAN dealer if you think that repairs are required.

When performing any checks or maintenance work, closely observe the ‘Maintenance precautions’ in the ‘Do-it-yourself’ section of this manual.

EXPLANATION OF GENERAL MAINTENANCE ITEMS

Additional information on the following items with “*” is found in the “Do-it-yourself” section of this manual.

Outside the vehicle

The maintenance items listed here should be performed from time to time, unless otherwise specified.
**Doors and engine hood:** Check that the doors and engine hood operate properly. Also ensure that all latches lock securely. Lubricate hinges, latches, latch pins, rollers and links if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released.

When driving in areas using road salt or other corrosive materials, check lubrication frequently.

**Lights:** Clean the headlights on a regular basis. Make sure that the headlights, stop lights, tail lights, turn signal lights, and other lights are all operating properly and installed securely. Also check headlight aim.

**Road wheel nuts (lug nuts):** When checking the tires, make sure no wheel nuts are missing, and check for any loose wheel nuts. Tighten if necessary.

**Tire rotation:** Tires should be rotated every 5,000 miles (8,000 km).

**Tires:** Check the pressure with a gauge often and always prior to long distance trips. If necessary, adjust the pressure in all tires, including the spare, to the pressure specified. Check carefully for damage, cuts or excessive wear.

**Tire Pressure Monitoring System (TPMS) transmitter components:** Replace the TPMS transmitter grommet seal, valve core and cap when the tires are replaced due to wear or age.

**Wheel alignment and balance:** If the vehicle should pull to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.

For additional information regarding tires, refer to "Important Tire Safety Information" (US) or "Tire Safety Information" (Canada) in the Warranty Information Booklet.

**Windshield:** Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Have a damaged windshield repaired by a qualified repair facility.

**Windshield wiper blades:** Check for cracks or wear if they do not wipe properly.

**Inside the vehicle**

The maintenance items listed here should be checked on a regular basis, such as when performing scheduled maintenance, cleaning the vehicle, etc.

**Accelerator pedal:** Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mat away from the pedal.

**Brake pedal:** Check the pedal for smooth operation. If the brake pedal suddenly goes down further than normal, the pedal feels spongy or the vehicle seems to take longer to stop, have your vehicle checked immediately. It is recommended that you visit a NISSAN dealer for this service. Keep the floor mat away from the pedal.

**Brakes:** Check that the brakes do not pull the vehicle to one side when applied.

**Continuously Variable Transmission (CVT) P (Park) position mechanism (if so equipped):** On a fairly steep hill check that the vehicle is held securely with the shift lever in the P (Park) position without applying any brakes.
Parking brake: Check the parking brake operation regularly. The vehicle should be securely held on a fairly steep hill with only the parking brake applied. If the parking brake needs adjustment, it is recommended that you visit a NISSAN dealer for this service.

Seats: Check seat position controls such as seat adjusters, seatback recliner, etc., to ensure they operate smoothly and all latches lock securely in every position. Check that the head restraints/headrests move up and down smoothly and the locks (if so equipped) hold securely in all latched positions.

Seat belts: Check that all parts of the seat belt system (for example, buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.

Steering wheel: Check for changes in the steering system, such as excessive free play, hard steering or strange noises.

Warning lights and chimes: Make sure all warning lights and chimes are operating properly.

Windshield defroster: Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.

Windshield wiper and washer*: Check that the wipers and washer operate properly and that the wipers do not streak.

Under the hood and vehicle
The maintenance items listed here should be checked periodically (for example, each time you check the engine oil or refuel).

Battery* (for serviceable batteries): Check the fluid level in each cell. The fluid should be at the bottom of the filler opening. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.

NOTE:
Care should be taken to avoid situations that can lead to potential battery discharge and potential no-start conditions such as:

1. Installation or extended use of electronic accessories that consume battery power when the engine is not running (Phone chargers, GPS, DVD players, etc.).

2. Vehicle is not driven regularly and/or only driven short distances.

In these cases, the battery may need to be charged to maintain battery health.

Brake and clutch (if so equipped) fluid level*: Make sure that the brake and clutch fluid levels are between the MIN and MAX lines on the reservoir.

Engine coolant level*: Check the coolant level when the engine is cold.

Engine drive belt*: Make sure the drive belt is not frayed, worn, cracked or oily.

Engine oil level*: Check the level after parking the vehicle on a level surface with the engine off. Wait more than 15 minutes for the oil to drain back into the oil pan.

Exhaust system: Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately have the exhaust system inspected. It is recommended that you visit a NISSAN dealer for this service. For additional information, refer to “Exhaust gas (carbon monoxide)” in the “Starting and driving” section of this manual.
Fluid leaks: Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or if fuel fumes are evident, check for the cause and have it corrected immediately.

Radiator and hoses: Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, rot or loose connections.

Underbody: The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances from the underbody, otherwise rust may form on the floor pan, frame, fuel lines and exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, in those areas where mud and dirt may have accumulated. For additional information, refer to the ‘Appearance and care’ section of this manual.

Windshield-washer fluid*: Check that there is adequate fluid in the reservoir.

The following descriptions are provided to give you a better understanding of the scheduled maintenance items that should be regularly checked or replaced. The maintenance schedule indicates at which mileage/time intervals each item requires service.

In addition to scheduled maintenance, your vehicle requires that some items be checked during normal day-to-day operation. For additional information, refer to “General maintenance” in this section.

Items marked with “*” are recommended by NISSAN for reliable vehicle operation. You are not required to perform maintenance on these items in order to maintain the warranties which come with your NISSAN. Other maintenance items and intervals are required.

When applicable, additional information can be found in the “Do-it-yourself” section of this manual.

NOTE:
NISSAN does not advocate the use of non-OEM approved aftermarket flushing systems and strongly advises against performing these services on a NISSAN product. Many of the aftermarket flushing systems use non-OEM approved chemicals or solvents, the use of which has not been validated by NISSAN.

For recommended fuel, lubricants, fluids, grease, and refrigerant, refer to “Recommended fluids/lubricants and capacities” in the “Technical and consumer information” section of this manual.

EMISSION CONTROL SYSTEM MAINTENANCE:

Drive belt*: Check engine drive belt for wear, fraying or cracking and for proper tension. Replace any damaged drive belt.

Engine air filter: Replace at specified intervals. When driving for prolonged periods in dusty conditions, check/replace the filter more frequently.
**Engine coolant**: Replace coolant at the specified interval. When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent with the proper mixture. (For additional information on the proper mixture for your area, refer to “Engine cooling system” in the “Do-it-yourself” section of this manual.)

**NOTE**: Mixing any other type of coolant or the use of non-distilled water may reduce the recommended service interval of the coolant.

**Engine oil and oil filter**: Replace engine oil and oil filter at the specified intervals. For recommended oil grade and viscosity refer to “Recommended fluids/lubricants and capacities” in the “Technical and consumer information” section of this manual.

**Engine valve clearance**: Inspect only if valve noise increases. Adjust valve clearance if necessary.

**Evaporative emissions control vapor lines**: Check vapor lines for leaks or looseness. Tighten connections or replace parts as necessary.

**Fuel filter**: Periodic maintenance is not required. (in-tank type filter)

**Fuel lines**: Check the fuel hoses, piping and connections for leaks, looseness, or deterioration. Tighten connections or replace parts as necessary.

**Spark plugs**: Replace at specified intervals. Install new plugs of the type as originally equipped.

**CHASSIS AND BODY MAINTENANCE**:

**Brake lines and cables**: Visually inspect for proper installation. Check for chafing, cracks, deterioration, and signs of leaking. Replace any deteriorated or damaged parts immediately.

**Brake pads, rotors, drums and linings**: Check for wear, deterioration and fluid leaks. Replace any deteriorated or damaged parts immediately.

**Exhaust system**: Visually inspect the exhaust pipes, muffler and hangers for leaks, cracks, deterioration, and damage. Tighten connections or replace parts as necessary.

**In-cabin microfilter**: Replace at specified intervals. When driving for prolonged periods in dusty conditions, replace the filter more frequently.

**Steering gear and linkage, axle and suspension parts, drive shaft boots**: Check for damage, looseness, and leakage of oil or grease. Under severe driving conditions, inspect more frequently.

**Tire rotation**: Tires should be rotated every 5,000 miles (8,000 km) according to the instructions under “General maintenance” in this section. When rotating tires, check for damage and uneven wear. Replace if necessary.

**Transmission fluid/oil**: Visually inspect for signs of leakage at specified intervals. If using a car-top carrier, or driving on rough or muddy roads:

- Replace the manual transaxle gear oil every 20,000 miles or 24 months.
- Replace the CVT fluid every 60,000 miles (96,000 km) or request the dealer to inspect the fluid deterioration data using a CONSULT. If the deterioration data is more than 210,000, replace the CVT fluid.
To help ensure smooth, safe and economical driving, NISSAN provides two maintenance schedules that may be used, depending upon the conditions in which you usually drive. These schedules contain both distance and time intervals, up to 120,000 miles (192,000 km)/144 months. For most people, the odometer reading will indicate when service is needed. However, if you drive very little, your vehicle should be serviced at the regular time intervals shown in the schedule.

After 120,000 miles (192,000 km)/144 months, continue maintenance at the same mileage/time intervals.

### ADDITIONAL MAINTENANCE ITEMS FOR SEVERE OPERATING CONDITIONS

Additional maintenance items for severe operating conditions should be performed on vehicles that are driven under especially demanding conditions. Additional maintenance items should be performed if you primarily operate your vehicle under the following conditions:

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.
- Operating in hot weather in stop-and-go 'rush hour' traffic.
- Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy or salt spread roads.
- Using a car-top carrier.

**NOTE:**

For vehicles operated in Canada, both standard and severe maintenance items should be performed at every interval.
The following tables show the standard maintenance schedule. Depending upon weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage, additional or more frequent maintenance may be required. After 120,000 miles (192,000 km)/144 months, continue maintenance at the same mileage/time interval.

</tr>
</tbody>
</table>
NOTE:

(1) After 40,000 miles (64,000 km) or 48 months, inspect every 10,000 miles (16,000 km) or 12 months. Replace the drive belt if found damaged.

(2) If operating mainly in dusty conditions, more frequent maintenance may be required.

(3) Periodic maintenance is not required.

(4) First replacement interval is 105,000 miles (168,000 km) or 84 months. After first replacement, replace every 75,000 miles (120,000 km) or 60 months.

(5) Use only Genuine NISSAN Long Life Antifreeze/Coolant (blue) or equivalent with proper mixture ratio of 50% antifreeze and 50% demineralized or distilled water. Mixing any other type of coolant or the use of non-distilled water may reduce the life expectancy of the factory fill coolant.

(6) For MRA8DE:
   Replace spark plug when the plug gap exceeds 0.053 in (1.35 mm) even within specified periodic replacement mileage.
   For MR16DDT:
   Replace spark plug when the plug gap exceeds 0.045 in (1.15 mm) even within specified periodic replacement mileage.

(7) Periodic maintenance is not required. However, if valve noise increased, inspect valve clearance.

* Maintenance items and intervals with “*” are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

**Maintenance and schedules** 9-11
### Maintenance and Schedules

**Note:**

Maintenance items with “★” should be performed more frequently according to “Maintenance under severe driving conditions”.

1. If using a car-top carrier or driving on rough or muddy roads, inspect CVT fluid deterioration every 60,000 miles (96,000 km), then change CVT fluid if necessary. And if the inspection is not performed, change (not just inspect) CVT fluid every 60,000 miles (96,000 km). It is recommended that you visit a NISSAN dealer for this service.
2. If using a car-top carrier, or driving on rough or muddy roads, change (not just inspect) oil at every 30,000 miles (48,000 km) or 24 months.
3. For additional information, refer to “General maintenance” in this section.

**Maintenance Items:**
- **Brake lines and cables**
- **Brake pads, rotors, drum and linings**: If using a car-top carrier or driving on rough or muddy roads, inspect CVT fluid deterioration every 60,000 miles (96,000 km), then change CVT fluid if necessary. And if the inspection is not performed, change (not just inspect) CVT fluid every 60,000 miles (96,000 km). It is recommended that you visit a NISSAN dealer for this service.
- **Brake fluid**: If using a car-top carrier or driving on rough or muddy roads, change (not just inspect) oil at every 30,000 miles (48,000 km) or 24 months.
- **CVT fluid**: See NOTE (1).
- **Manual transmission gear oil**: See NOTE (2).
- **Steering gear and linkage, axle and suspension parts**: See NOTE (3).
- **Tire rotation**: See NOTE (3).
- **Front drive shaft boots**: If using a car-top carrier or driving on rough or muddy roads, inspect CVT fluid deterioration every 60,000 miles (96,000 km), then change CVT fluid if necessary. And if the inspection is not performed, change (not just inspect) CVT fluid every 60,000 miles (96,000 km). It is recommended that you visit a NISSAN dealer for this service.
- **Exhaust system**: See NOTE (2).
- **In-cabin microfilter**: See NOTE (3).
- **NISSAN Intelligent Key® battery**: See NOTE (3).
MAINTENANCE UNDER SEVERE OPERATING CONDITIONS

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

SEVERE DRIVING CONDITIONS

- Repeated short trips of less than 5 miles (8 km).
- Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing.
- Operating in hot weather in stop-and-go “rush hour” traffic.
- Extensive idling and/or low speed driving for long distance, such as police, taxi or door-to-door delivery use.
- Driving in dusty conditions.
- Driving on rough, muddy or salt spread roads.
- Using a car-top carrier.

Maintenance operation: inspect = inspect and correct or replace as necessary.

FUEL RECOMMENDATION

MRA8DE
Use unleaded regular gasoline with an octane rating of at least 87 AKI (Anti-Knock Index) number (Research octane number 91).

MR16DDT
NISSAN recommends the use of unleaded premium gasoline with an octane rating of at least 91 AKI (Anti-Knock Index) number (Research octane number 96). If unleaded premium gasoline is not available, you may use unleaded regular gasoline with an octane rating of at least 87 AKI number (research octane number 91), but you may notice a decrease in performance.

CAUTION
- Only vehicles with the E-85 filler door label can operate on E-85. Fuel system or other damage can occur if E-85 is used in vehicles that are not designed to run on E-85.
- Using a fuel other than that specified could adversely affect the emission control system, and may also affect the warranty coverage.
- Under no circumstances should a leaded gasoline be used, because this will damage the three-way catalyst.
- Do not use a fuel containing more than 15% ethanol in your vehicle. Your vehicle is not designed to run on a fuel containing more than 15% ethanol. Using a fuel containing more than 15% ethanol in a vehicle not specifically designed for a fuel containing more than 15% ethanol can adversely affect the emission control devices and systems of the vehicle. Damage caused by such fuel is not covered by the NISSAN New Vehicle Limited Warranty.
- Do not use fuel that contains the octane booster methylcyclopentadienyl manganese tricarbonyl (MMT). Using fuel containing MMT may adversely affect vehicle performance and vehicle emissions. Not all fuel dispensers are labeled to indicate MMT content, so you may have to consult your gasoline retailer for more details. Note that Federal and California laws prohibit the use of MMT in reformulated gasoline.

U.S. government regulations require ethanol dispensing pumps to be identified by a small, square, orange and black label with the common abbreviation or the appropriate percentage for that region.

Gasoline specifications
NISSAN recommends using gasoline that meets the World-Wide Fuel Charter (WWFC) specifications where it is available. Many of the automobile manufacturers developed this specification to improve emission control system and vehicle performance. Ask your service station manager if the gasoline meets the WWFC specifications.

Reformulated gasoline
Some fuel suppliers are now producing reformulated gasolines. These gasolines are specially designed to reduce vehicle emissions. NISSAN supports efforts towards cleaner air and suggests that you use reformulated gasoline when available.
Gasoline containing oxygenates

Some fuel suppliers sell gasoline containing oxygenates such as ethanol, Methyl Tert-butyl Ether (MTBE) and methanol with or without advertising their presence. NISSAN does not recommend the use of fuels of which the oxygenate content and the fuel compatibility for your NISSAN cannot be readily determined. If in doubt, ask your service station manager.

If you use oxygenate-blend gasoline, please take the following precautions as the usage of such fuels may cause vehicle performance problems and/or fuel system damage.

- The fuel should be unleaded and have an octane rating no lower than that recommended for unleaded gasoline.
- If an oxygenate-blend other than methanol blend is used, it should contain no more than 15% oxygenate.

- If a methanol blend is used, it should contain no more than 5% methanol (methyl alcohol, wood alcohol). It should also contain a suitable amount of appropriate cosolvents and corrosion inhibitors. If not properly formulated with appropriate cosolvents and corrosion inhibitors, such methanol blends may cause fuel system damage and/or vehicle performance problems. At this time, sufficient data is not available to ensure that all methanol blends are suitable for use in NISSAN vehicles.

If any driveability problems such as engine stalling and difficult hot-starting are experienced after using oxygenate-blend fuels, immediately change to a non-oxygenate fuel or a fuel with a low blend of MTBE.

Take care not to spill gasoline during refueling. Gasoline containing oxygenates can cause paint damage.

E-15 fuel

E-15 fuel is a mixture of approximately 15% fuel ethanol and 85% unleaded gasoline. E-15 can only be used in vehicles designed to run on E-15 fuel. U.S. government regulations require fuel ethanol dispensing pumps to be identified with small, square, orange and black label with the common abbreviation or the appropriate percentage for that region.

E-85 fuel

E-85 fuel is a mixture of approximately 85% fuel ethanol and 15% unleaded gasoline. E-85 can only be used in a Flexible Fuel Vehicle (FFV). Do not use E-85 in your vehicle. U.S. government regulations require fuel ethanol dispensing pumps to be identified by a small, square, orange and black label with the common abbreviation or the appropriate percentage for that region.

Fuel containing MMT

MMT, or methylcyclopentadienyl manganese tricarbonyl, is an octane boosting additive. NISSAN does not recommend the use of fuel containing MMT. Such fuel may adversely affect vehicle performance, including the emissions control system. Note that while some fuel pumps label MMT content, not all do, so you may have to consult your gasoline retailer for more details.
Aftermarket fuel additives

NISSAN does not recommend the use of any aftermarket fuel additives (for example, fuel injector cleaner, octane booster, intake valve deposit removers, etc.) which are sold commercially. Many of these additives intended for gum, varnish or deposit removal may contain active solvents or similar ingredients that can be harmful to the fuel system and engine.

Octane rating tips

Using unleaded gasoline with an octane rating lower than recommended can cause persistent, heavy “spark knock.” (“Spark knock” is a metallic rapping noise.) If severe, this can lead to engine damage. If you detect a persistent heavy spark knock even when using gasoline of the stated octane rating, or if you hear steady spark knock while holding a steady speed on level roads, it is recommended that you have a NISSAN dealer correct the condition. Failure to correct the condition is misuse of the vehicle, for which NISSAN is not responsible.

Incorrect ignition timing may result in spark knock, after-run and/or overheating, which may cause excessive fuel consumption or engine damage. If any of the above symptoms are encountered, have your vehicle checked. It is recommended that you visit a NISSAN dealer for servicing.

However, now and then you may notice light spark knock for a short time while accelerating or driving up hills. This is not a cause for concern, because you get the greatest fuel benefit when there is light spark knock for a short time under heavy engine load.
ENGINE OIL AND OIL FILTER RECOMMENDATIONS

Selecting the correct oil

It is essential to choose the correct grade, quality and viscosity engine oil to ensure satisfactory engine life and performance. For additional information, refer to “Recommended fluids/lubricants and capacities” in this section. NISSAN recommends the use of an energy conserving oil in order to improve fuel economy.

Select only engine oils that meet the American Petroleum Institute (API) certification or International Lubricant Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

Oil additives

NISSAN does not recommend the use of oil additives. The use of an oil additive is not necessary when the proper oil type is used and maintenance intervals are followed.

Oil viscosity

The engine oil viscosity or thickness changes with temperature. Because of this, it is important to select the engine oil viscosity based on the temperatures at which the vehicle will be operated before the next oil change. Choosing an oil viscosity other than that recommended could cause serious engine damage.

Selecting the correct oil filter

Your new NISSAN vehicle is equipped with a high-quality Genuine NISSAN oil filter. When replacing, use a Genuine NISSAN oil filter or its equivalent for the reason described in “Change intervals.”

Change intervals

The oil and oil filter change intervals for your engine are based on the use of the specified quality oils and filters. Using engine oil and filters that are not of the specified quality, or exceeding recommended oil and filter change intervals could reduce engine life. Damage to the engine caused by improper maintenance or use of incor-
rect oil and filter quality and/or viscosity is not covered by the NISSAN New Vehicle Limited Warranty.

Your engine was filled with a high-quality engine oil when it was built. You do not have to change the oil before the first recommended change interval. Oil and filter change intervals depend upon how you use your vehicle.

Operation under the following conditions may require more frequent oil and filter changes:

- repeated short distance driving at cold outside temperatures
- driving in dusty conditions
- extensive idling
- stop and go commuting

For additional information, refer to the ‘Maintenance and schedules’ section of this manual.

AIR CONDITIONER SYSTEM (if so equipped) REFRIGERANT AND OIL RECOMMENDATIONS

The air conditioner system in your NISSAN vehicle must be charged with the refrigerant HFC-134a (R-134a) and NISSAN A/C system oil Type S (DH-PS) or the exact equivalents.

**CAUTION**

The use of any other refrigerant or oil may cause severe damage to the air conditioning system and will require the replacement of all air conditioner system components.

The refrigerant HFC-134a (R-134a) in your NISSAN vehicle does not harm the earth’s ozone layer. Although this refrigerant does not affect the earth’s atmosphere, certain government regulations require the recovery and recycling of any refrigerant during automotive air conditioner system service. A NISSAN dealer has the trained technicians and equipment needed to recover and recycle your air conditioner system refrigerant.

It is recommended that you visit a NISSAN dealer when servicing your air conditioner system.

WHEN TRAVELING OR REGISTERING IN ANOTHER COUNTRY

When planning to drive your NISSAN vehicle in another country, you should first find out if the fuel available is suitable for your vehicle’s engine.

Using fuel with an octane rating that is too low may cause engine damage. All gasoline vehicles must be operated with unleaded gasoline. Therefore, avoid taking your vehicle to areas where appropriate fuel is not available.

When transferring the registration of your vehicle to another country, state, province or district, it may be necessary to modify the vehicle to meet local laws and regulations.

The laws and regulations for motor vehicle emission control and safety standards vary according to the country, state, province or district; therefore, vehicle specifications may differ.

When any vehicle is to be taken into another country, state, province or district and registered, its modifications, transportation and registration are the responsibility of the user. NISSAN is not responsible for any inconvenience that may result.

VEHICLE IDENTIFICATION NUMBER

(VEHICLE IDENTIFICATION NUMBER (VIN) PLATE)

The Vehicle Identification Number (VIN) plate is attached as shown. This number is the identification for your vehicle and is used in the vehicle registration.

VEHICLE IDENTIFICATION NUMBER

(chassis number)

The vehicle identification number is located as shown.
ENGINE SERIAL NUMBER
The number is stamped on the engine as shown.

F.M.V.S.S./C.M.V.S.S. CERTIFICATION LABEL
The Federal/Canadian Motor Vehicle Safety Standard (F.M.V.S.S./C.M.V.S.S.) certification label is affixed as shown. This label contains valuable vehicle information, such as: (GVWR), (GAWR), month and year of manufacture, (VIN), etc. Review it carefully.

EMISSION CONTROL INFORMATION LABEL
The emission control information label is attached to the underside of the hood as shown.
TIRE AND LOADING INFORMATION LABEL
The cold tire pressure is shown on the Tire and Loading Information label. The label is located as shown.

AIR CONDITIONER SPECIFICATION LABEL (if so equipped)
The air conditioner specification label is affixed to the underside of the hood as shown.

INSTALLING FRONT LICENSE PLATE

Use the following steps to mount the front license plate:
1. Hold the front license plate bracket against the front bumper fascia and mark two locations A.
2. Drill two shallow 0.39 in (10 mm) holes in the front bumper fascia at the two locations marked in the previous step.
3. Insert two grommets B into the holes in the front bumper fascia.

4. Insert a small flat-bladed screwdriver into the grommet holes to turn the threaded part of the grommet 90°.

5. Mount the front license plate bracket using two screws C.

TERMS

It is important to familiarize yourself with the following terms before loading your vehicle:

- Curb Weight (actual weight of your vehicle) - vehicle weight including: standard parts, fluids, emergency tools and spare tire assembly. This weight does not include passengers and cargo.

- GVW (Gross Vehicle Weight) - curb weight plus the combined weight of passengers and cargo.

- GVWR (Gross Vehicle Weight Rating) - maximum total combined weight of the unloaded vehicle, passengers, luggage, hitch, trailer tongue load and any other optional equipment. This information is located on the F.M.V.S.S./C.M.V.S.S. certification label.

- GAWR (Gross Axle Weight Rating) - maximum weight (load) limit specified for the front or rear axle. This information is located on the F.M.V.S.S./C.M.V.S.S. certification label.

- GCWR (Gross Combined Weight rating) - The maximum total weight rating of the vehicle, passengers, cargo, and trailer.
• Vehicle Capacity Weight, Load limit, Total load capacity - maximum total weight limit specified of the load (passengers and cargo) for the vehicle. This is the maximum combined weight of occupants and cargo that can be loaded into the vehicle. If the vehicle is used to tow a trailer, the trailer tongue weight must be included as part of the cargo load. This information is located on the Tire and Loading Information label.

• Cargo capacity - permissible weight of cargo, the subtracted weight of occupants from the load limit.

VEHICLE LOAD CAPACITY
Do not exceed the load limit of your vehicle shown as “The combined weight of occupants and cargo” on the Tire and Loading Information label. Do not exceed the number of occupants shown as “Seating Capacity” on the Tire and Loading Information label.

To get “the combined weight of occupants and cargo”, add the weight of all occupants, then add the total luggage weight. Examples are shown in the following illustration.
Steps for determining correct load limit

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX lbs. or XXX kg” on your vehicle’s Tire and Loading Information label.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX lbs. or XXX kg.

4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the XXX amount equals 1,400 lbs. and there will be five 150 lbs. passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1,400-750 (5 X 150) = 650 lbs.) or (640-340 (5 X 70) = 300 kg.)
5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in step 4.

Before driving a loaded vehicle, confirm that you do not exceed the Gross Vehicle Weight Rating (GVWR) or the Gross Axle Weight Rating (GAWR) for your vehicle. For additional information, refer to “Measurement of weights” in this section.

Also check tires for proper inflation pressures. For additional information, refer to “Tire and Loading Information label” in this section.

LOADING TIPS

- The GVW must not exceed GVWR or GAWR as specified on the F.M.V.S.S./C.M.V.S.S. certification label.

- Do not load the front and rear axle to the GAWR. Doing so will exceed the GVWR.

- Overloading not only can shorten the life of your vehicle and the tire, but can also cause unsafe vehicle handling and longer braking distances. This may cause a premature tire failure which could result in a serious accident and personal injury. Failures caused by overloading are not covered by the vehicle’s warranty.

- Properly secure all cargo with ropes or straps to help prevent it from sliding or shifting. Do not place cargo higher than the seatbacks. In a sudden stop or collision, unsecured cargo could cause personal injury.

- Do not load your vehicle any heavier than the GVWR or the maximum front and rear GAWRs. If you do, parts of your vehicle can break, tire damage could occur, or it can change the way your vehicle handles. This could result in loss of control and cause personal injury.

MEASUREMENT OF WEIGHTS

Secure loose items to prevent weight shifts that could affect the balance of your vehicle. When the vehicle is loaded, drive to a scale and weigh the front and the rear wheels separately to determine axle loads. Individual axle loads should not exceed either of the gross axle weight ratings (GAWR). The total of the axle loads should not exceed the gross vehicle weight rating (GVWR). These ratings are given on the vehicle certification label. If weight ratings are exceeded, move or remove items to bring all weights below the ratings.
TOWING A TRAILER

Do not tow a trailer with your vehicle.

FLAT TOWING

Towing your vehicle with all four wheels on the ground is sometimes called flat towing. This method is sometimes used when towing a vehicle behind a recreational vehicle, such as a motor home.

**CAUTION**

- Failure to follow these guidelines can result in severe transmission damage.
- Whenever flat towing your vehicle, always tow forward, never backward.
- Never tow your front wheel drive vehicle with the front tires on the ground. Doing so may cause serious and expensive damage to the powertrain.
- Do NOT tow any continuously variable transmission vehicle with all four wheels on the ground (flat towing). Doing so WILL DAMAGE internal transmission parts due to lack of transmission lubrication.

- For emergency towing procedures refer to "Towing recommended by NISSAN" in the "In case of emergency" section of this manual.

Manual Transmission (if so equipped)

- Always tow with the manual transmission in N (Neutral).
- After towing 500 miles (805 km), start and idle the engine with the transmission in N (Neutral) for two minutes. Failure to idle the engine after every 500 miles (805 km) of towing may cause damage to internal transmission parts.

Continuously Variable Transmission (if so equipped)

To tow a vehicle equipped with a continuously variable transmission, an appropriate vehicle dolly MUST be placed under the towed vehicle’s drive wheels. Always follow the dolly manufacturer’s recommendations when using their product.

**UNIFORM TIRE QUALITY GRADING**

DOT (Department of Transportation) Quality Grades: All passenger car tires must conform to federal safety requirements in addition to these grades.

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width. For example:

**Treadwear 200 Traction AA Temperature A**

Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.
Traction AA, A, B and C

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Temperature A, B and C

The temperature grades of A (the highest), B, and C, representing the tire’s resistance to the generation of heat, and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

WARNING

The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

WARNING

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, under-inflation, or excessive loading, either separately or in combination, can cause heat build-up and possible tire failure.

EMISSION CONTROL SYSTEM WARRANTY

Your NISSAN vehicle is covered by the following emission warranties:

For USA

1. Emission Defects Warranty
2. Emissions Performance Warranty

Details of this warranty may be found with other vehicle warranties in your Warranty Information Booklet which comes with your NISSAN vehicle. If you did not receive a Warranty Information Booklet, or it is lost, you may obtain a replacement by writing to:

- Nissan North America, Inc.
  Consumer Affairs Department
  P.O. Box 685003
  Franklin, TN 37068-5003

For Canada

Emission Control System Warranty

Details of this warranty may be found with other vehicle warranties in your Warranty Information Booklet which comes with your NISSAN vehicle. If you did not receive a Warranty Information Booklet, or it is lost, you may obtain a replacement by writing to:

- Nissan Canada Inc.
  5290 Orbitor Drive
  Mississauga, Ontario, L4W 4Z5

Technical and consumer information 10-19
REPORTING SAFETY DEFECTS

For USA
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying NISSAN.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or NISSAN.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.

You may notify NISSAN by contacting our Consumer Affairs Depart- ment, toll-free, at 1-800-NISSAN-1.

For Canada
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform Transport Canada in addition to notifying NISSAN.

If Transport Canada receives complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may request that NISSAN conduct a recall campaign. However, Transport Canada cannot become involved in individual problems between you, your dealer, or NISSAN.

You may contact Transport Canada’s Defect Investigations and Recalls Division toll free at 1-800-333-0371 or online at www.tc.gc.ca/roadsafety (English speakers) or www.tc.gc.ca/securiteroutiere (French speakers).

To notify NISSAN of any safety concerns please contact our Consumer Information Centre toll free at 1-800-387-0122.

Additional information concerning motor vehicle safety may be obtained from Transport Canada’s Road Safety Information Centre at 1-800-333-0371 or online at www.tc.gc.ca/roadsafety (English speakers) or www.tc.gc.ca/securiteroutiere (French speakers).
Due to legal requirements in some states and Canadian Provinces, your vehicle may be required to be in what is called the “ready condition” for an Inspection/Maintenance (I/M) test of the emission control system.

The vehicle is set to the “ready condition” when it is driven through certain driving patterns. Usually, the ready condition can be obtained by ordinary usage of the vehicle.

If a powertrain system component is repaired or the battery is disconnected, the vehicle may be reset to a “not ready” condition. Before taking the I/M test, check the vehicle’s inspection/maintenance test readiness condition. Place the ignition switch in the ON position without starting the engine. If the Malfunction Indicator Light (MIL) comes on steady for 20 seconds and then blinks for 10 seconds, the I/M test condition is “not ready.” If the MIL does not blink after 20 seconds, the I/M test condition is “ready.” It is recommended that you visit a NISSAN dealer to set the “ready condition” or to prepare the vehicle for testing.

This vehicle is equipped with an Event Data Recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer and NISSAN dealer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR. EDR data will only be accessed with the consent of the vehicle owner or lessee or as otherwise required or permitted by law.
Genuine NISSAN Service Manuals for this model year and prior can be purchased. A Genuine NISSAN Service Manual is the best source of service and repair information for your vehicle. This manual is the same one used by the factory-trained technicians working at NISSAN dealerships. Genuine NISSAN Owner’s Manuals can also be purchased.

For USA
For current pricing and availability of Genuine NISSAN Service Manuals, contact:
www.nissan-techinfo.com

For current pricing and availability of Genuine NISSAN Owner’s Manuals, contact:
1-800-247-5321

For Canada
To purchase a copy of a Genuine NISSAN Service Manual or Owner’s Manual for this model year and prior, please visit the nearest NISSAN dealer. For the phone number and location of a NISSAN dealer in your area, call the NISSAN Information Center at 1-800-387-0122 and a bilingual NISSAN representative will assist you.

**FUEL RECOMMENDATION:**

**MRA8DE**

Use unleaded regular gasoline with an octane rating of at least 87 AKI (Anti-Knock Index) number (Research octane number 91).

**MR16DDT**

NISSAN recommends the use of unleaded premium gasoline with an octane rating of at least 91 AKI (Anti-Knock Index) number (Research octane number 96). If unleaded premium gasoline is not available, you may use unleaded regular gasoline with an octane rating of at least 87 AKI (Research octane rating number 91), but you may notice a decrease in performance.

**CAUTION**

- Only vehicles with the E-85 filler door label can operate on E-85. Fuel system or other damage can occur if E-85 is used in vehicles that are not designed to run on E-85.
- Using a fuel other than that specified could adversely affect the emission control system, and may also affect the warranty coverage.
- Under no circumstances should a leaded gasoline be used, because this will damage the three-way catalyst.
- Do not use a fuel containing more than 15% ethanol in your vehicle. Your vehicle is not designed to run on a fuel containing more than 15% ethanol. Using a fuel containing more than 15% ethanol in a vehicle not specifically designed for a fuel containing more than 15% ethanol can adversely affect the emission control devices and systems of the vehicle. Damage caused by such fuel is not covered by the NISSAN New Vehicle Limited Warranty.
- Do not use fuel that contains the octane booster methylcyclopentadienyl manganese tricarbonyl (MMT). Using fuel containing MMT may adversely affect vehicle performance and vehicle emissions. Not all fuel dispensers are labeled to indicate MMT content, so you may have to consult your gasoline retailer for more details. Note that Federal and California laws prohibit the use of MMT in reformulated gasoline.
- U.S. government regulations require ethanol dispensing pumps to be identified by a small, square, orange and black label with the common abbreviation or the appropriate percentage for that region.

For additional information, refer to “Recommended fluids/lubricants and capacities” in the “Technical and consumer information” section of this manual.

**ENGINE OIL RECOMMENDATION:**

- Genuine ‘Nissan Motor Oil 0W-20 SN’

For additional information, refer to “Engine oil and oil filter recommendations” in the “Technical and consumer information” section of this manual.

**COLD TIRE PRESSURE:**

For additional information, refer to “Tire and Loading Information label” in the “Technical and consumer information” section of this manual.

The label is typically located on the driver side center pillar or on the driver’s door. For additional information, refer to “Wheels and tires” in the “Do-it-yourself” section of this manual.
RECOMMENDED NEW VEHICLE
BREAK-IN PROCEDURE:

During the first 1,200 miles (2,000 km) of vehicle use, follow the break-in procedure recommendations for the future reliability and economy of your new vehicle. For additional information, refer to “Break-in schedule” in the “Starting and driving” section of this manual. Failure to follow these recommendations may result in vehicle damage or shortened engine life.
